CONTRIBUTORS

REG GRANT, CONSULTANT EDITOR

R. G. Grant has written extensively in the fields of military history, general history, current affairs, and biography. His publications have included the DK books Flight: 100 Years of Aviation, Battle at Sea, and World War I: The Definitive Visual Guide.

FIONA COWARD

Dr. Fiona Coward is Senior Lecturer in Archaeology and Anthropology at Bournemouth University, UK. Her research focuses on the changes in human society, from the very small social groups of our prehistory to the global social networks that characterize people’s lives today.

THOMAS CUSSANS

Thomas Cussans, writer and historian, has contributed to numerous historical works. They include DK’s Timelines of World History, History Year by Year, and History: The Ultimate Visual Guide. He was previously the publisher of The Times History of the World and The Times Atlas of European History. His most recent published work is The Holocaust.

JOEL LEVY

Joel Levy is a writer specializing in history and the history of science. He is the author of more than 20 books, including Lost Cities, History’s Greatest Discoveries, and 50 Weapons that Changed the World.

PHILIP PARKER

Philip Parker is a historian specializing in the classical and medieval world. He is the author of the DK Companion Guide to World History, The Empire Stops Here: A Journey Around the Frontiers of the Roman Empire, The Northmen’s Fury: A History of the Viking World, and general editor of The Great Trade Routes: A History of Cargoes and Commerce Over Land and Sea. He was a contributor to DK History Year by Year and DK History of the World in 1000 Objects. He previously worked as a diplomat and a publisher of historical atlases.

SALLY REGAN

Sally Regan has contributed to over a dozen DK titles including History, World War II, and Science. She is also an award-winning documentary maker for Channel Four and the BBC in the UK.

PHILIP WILKINSON

Philip Wilkinson has written many books on historical subjects, heritage, architectural history, and the arts. As well as bestsellers such as What The Romans Did For Us and widely-praised titles such as The Shock of the Old and Great Buildings, he has contributed to numerous encyclopaedias and popular reference books.

CTION
The ultimate aim of history is human self-knowledge. In the words of 20th-century historian R. G. Collingwood: “The value of history is that it teaches us what man has done and thus what man is.” We cannot hope to understand our lives without it.

History itself has a history. From earliest times, all societies—literate or pre-literate—told stories about their origins or their past, usually imaginative tales centering around the acts of gods and heroes. The first literate civilizations also kept records of the actions of their rulers, inscribed on clay tablets or on the walls of palaces and temples. But at first these ancient societies made no attempt at a systematic inquiry into the truth of the past; they did not differentiate between what had really happened and the events manifest in myth and legend.

**Ancient historical narrative**

It was the Ancient Greek writers Herodotus and Thucydides in the 5th century BCE who first explored questions about the past through the collection and interpretation of evidence—the word “history,” first used by Herodotus, means “inquiry” in Greek. Herodotus’s work still contained a considerable mixture of myth, but Thucydides’ account of the Peloponnesian War satisfies most criteria of modern historical study. It was based on interviews with eyewitnesses of the conflict and attributed events to human agency rather than the intervention and actions of the gods.

Thucydides had invented one of the most durable forms of history: the detailed narrative of war and political conflict, diplomacy, and decision-making. The subsequent rise of Rome to dominance of the Mediterranean world encouraged historians to develop another genre of broader scope: the account of “how we got to where we are today.” The Hellenic historian Polybius (200–118 BCE) and the Roman historian Livy (59 BCE–17 CE) both sought to create a narrative of the rise of Rome—a “big picture” that would help to make sense of events on a large timescale. Although restricted to the Roman world, this was the beginning of what is sometimes called “universal history,” which attempts to describe progress from earliest origins to the present as a story with a goal, giving the past apparent purpose and direction.

At the same period in China, historian Sima Qian (c.145–86 BCE) was similarly tracing Chinese history over thousands of years, from the legendary Yellow Emperor (c.2697 BCE) to the Han dynasty under Emperor Wu (c.109 BCE).

**Moral lessons**

As well as making sense of events through narratives, historians in the ancient world established the tradition of history as a source of moral lessons and reflections. The history writing of Livy or Tacitus (56–117 CE), for instance, was in part designed to examine the behavior of heroes and villains, meditating on the strengths and weaknesses in the characters of emperors and generals, providing exemplars for the virtuous to imitate or shun. This continues to be one of the functions of history. French chronicler Jean Froissart (1337–1405) said he had
written his accounts of chivalrous knights fighting in the Hundred Years’ War “so that brave men should be inspired thereby to follow such examples.” Today, historical studies of Lincoln, Churchill, Gandhi, or Martin Luther King, Jr. perform the same function.

The “Dark Ages”
The rise of Christianity in the late Roman Empire fundamentally changed the concept of history in Europe. Historical events came to be viewed by Christians as divine providence, or the working out of God's will. Skeptical inquiry into what actually happened was usually neglected, and accounts of miracles and martyrdoms were generally accepted as true without question. The Muslim world, in this as in other ways, was frequently more sophisticated than Christendom in Medieval times, with the Arab historian Ibn Khaldun (1332–1406) railing against the blind, uncritical acceptance of fanciful accounts of events that could not be verified.

Neither Christian nor Muslim historians produced a work on the scale of the chronicle of Chinese history published under the Song dynasty in 1085, which recorded Chinese history spanning almost 1,400 years and filled 294 volumes.

Renaissance Humanism
Whatever the undoubted merits of other civilizations’ traditions of history writing, it was in Western Europe that modern historiography evolved. The Renaissance—which began in Italy in the 15th century, then spread throughout Europe lasting until the end of the 16th century in some areas—centered upon the rediscovery of the past. Renaissance thinkers found a fertile source of inspiration in classical antiquity, in areas as diverse as architecture, philosophy, politics, and military tactics. The humanist scholars of the Renaissance period declared history one of the principal subjects in their new educational curriculum, and the antiquary became a familiar figure in elite circles, rummaging among ancient ruins and building up collections of old coins and inscriptions. At the same time, the spread of printing made history available to a much wider audience than ever before.

The Enlightenment
By the 18th century in Europe, the methodology of history—which consisted of ascertaining facts by criticizing and comparing historical sources—had reached a fair level of sophistication. European thinkers had reached general agreement on the division of the past into three main periods: Ancient, Medieval, and Modern. This periodization was at root a value judgment, with the Medieval period, dominated by the Church, viewed as a time of irrationality and barbarism and separating the dignified world of the ancient civilizations from the newly emerging, rational universe of modern Europe. Enlightenment philosophers wrote histories that ridiculed the follies of the past.

The Romantic spirit
In stark contrast, the Romantic movement that swept across Europe from the late 18th century found an intrinsic value in the difference between the past and the present.

> To live with men of an earlier age is like travelling in foreign lands. **René Descartes**

*Discourse on Method* (1637)
The Romantics drew inspiration from the Middle Ages, and instead of seeing the past as a preparation for the modern world, as had previously been the case, Romantic historians tried the imaginative exercise of entering into the spirit of past ages. Much of this was associated with nationalism. The German Romantic thinker Johann Gottfried Herder (1774–1803) burrowed into the past in search of roots of national identity and an authentic “German spirit.” As nationalism triumphed in Europe in the 19th century, much of history became a celebration of national characteristics and national heroes, often veering into myth-making. Every country wanted to have its sacred heroic history, just as it had its flag and its national anthem.

**The “Grand Narrative”**

In the 19th century, history became increasingly important and took on the quality of destiny. Arrogantly, European civilization saw itself as the goal to which all history had been progressing and constructed narratives that made sense of the past in those terms. The German philosopher Georg Wilhelm Friedrich Hegel (1770–1831) articulated a grand scheme of history as a logical development, which culminated in the end point of the Prussian state. Philosopher and social revolutionary Karl Marx (1818–83) later adapted Hegel’s scheme into his own theory (“historical materialism”), in which he claimed that economic progress, which caused conflict between the social classes, would inevitably one day result in the proletariat seizing power from the bourgeoisie, while the capitalist world order collapsed under its own inner contradictions. Arguably, Marxism was to prove the most influential and durable of all historical “grand narratives.”

Like other areas of knowledge, in the 19th century history underwent professionalization and it became an academic discipline. Academic history aspired to the status of a science, and the accumulation of “facts” was its avowed purpose. A gap opened up between “serious” history—often heavy on economic statistics—and the colorful literary works of popular historians, such as Jules Michelet (1798–1874) and Thomas Macaulay (1800–59).

**The rise of social history**

In the 20th century, the subject matter of history—which had always focused on kings, queens, prime ministers, presidents, and generals—increasingly expanded to embrace the common people, whose role in historical events became accessible through more in-depth research. Some historians (initially those in France) chose to disregard the “history of events” altogether, preferring instead to study social structures and the patterns of everyday life, beliefs, and ways of thinking (“mentalités”) of ordinary people in different historical periods.

**A Eurocentric approach**

Broadly speaking, until the second half of the 20th century, most world history was written as the story of the triumph of Western civilization. This approach was as implicit in Marxist versions of history as in those histories that celebrated the
progress of technology, enterprise, and liberal democracy. It did not necessarily imply optimism—there were numerous prophets of decline and doom. But it did suggest that essentially history had been made, and was still being made, by Europe and European offshoots further afield. For instance, it was deemed acceptable for respected European historians to maintain that black Africa had no significant history at all, having failed to contribute to the onward march of humanity.

**Postcolonial revisionism**

In the course of the second half of the 20th century, the notion of a single, purposeful, historical “grand narrative” collapsed, taking Eurocentrism with it. The postcolonial, postmodernist world was seen as requiring a multiplicity of histories told from the point of view of many different social identities. There was a surge of interest in the study of black history, women’s history, and gay history, as well as histories narrated from an Asian, African, or American Indian standpoint. The marginal and oppressed in society were reassessed as “agents” of history rather than passive victims.

A riot of revisionism upturned much of the history of the world as commonly known to educated people in the West, although often without putting any satisfactory alternative version in place of the old. For example, the puzzlement that resulted can be seen in the response to the 500th anniversary in 1992 of Christopher Columbus’s first voyage to the Americas. It would once have been expected to excite widespread celebration in the United States, but was in practice acknowledged with some embarrassment, if at all. People are no longer sure what to think about traditional history, its Great Men, and its epoch-making events.

**A 21st-century perspective**

The content of *The History Book* reflects this abandonment of “grand narratives” of human progress. It aims to present a general reader with an overview of world history through specific moments, or events, which can act as windows upon selected areas of the past. In line with contemporary concerns, this book also reflects the long-term importance of key factors such as population growth, climate, and the environment throughout human history. At the same time, it gives an account of matters of traditional popular historical interest, such as the Magna Carta, the Black Death, and the American Civil War.

The book begins with the origins of humans and “pre-history” and then progresses through different historical ages to the present day. In reality of course there were no such clear breaks between epochs, and where there is an overlap on dates, entries are included in the most appropriate ideological era.

As this book illustrates, history is a process rather than a series of unconnected events. We can only speculate on how the events we experience today will shape the history of tomorrow. No one in the early 21st century can possibly claim to make sense of history, but it remains the fundamental discipline for anyone who believes, as the poet Alexander Pope did, that “the proper study of Mankind is Man.”

---

“We are not makers of history. We are made by history.”

**Martin Luther King, Jr.**

*Strength to Love* (1963)
HUMAN ORI

200,000 YEARS

0
ORIGINS
AGO—3500 BCE
The first humans (*Homo sapiens*) emerge in East Africa. Neanderthals (*Homo neanderthalensis*) are living in Europe and West Asia. Paleolithic people start to create art (sculptures of animals and cave paintings) and artifacts (jewelry and decorative tools and weapons). A period of intense cold, known as the "Big Freeze," occurs. People and animals in northern regions die out or migrate southward. Jericho (in the modern-day West Bank) is settled; to this day it remains one of the oldest continuously inhabited towns in the world.

Humans have spread across the globe and inhabit most of Eurasia and Australia, which they have reached by boat from Southeast Asia. The first examples of human figurines emerge, usually representing women and carved or sculpted from bone, ivory, terracotta, or stone. Humans start to arrive in North America, either across the land bridge connecting Asia and North America (now the Bering Strait) or by sea.

A settlement at Çatalhöyük, central Turkey, is established; evidence of complex rituals indicates social cohesion.

It is widely believed that the origins of the human race lie in Africa. By the usual processes of biological evolution and natural selection, the genus *Homo* evolved in East Africa over millions of years alongside the chimpanzees, its near relatives. By the same biological processes, *Homo sapiens*—modern humans—evolved alongside other hominins (the relatives of humans, including Neanderthals, who died out 40,000 years ago).

About 100,000 years ago or so, the scattered bands of hunting and foraging humans would have been almost indistinguishable from the other great apes. But at some point (precisely when is hard to define) humans began to change in a new way, not by the process of biological evolution but by cultural evolution. They developed the ability to alter their way of life through the creation of tools, languages, beliefs, social customs, and art. By the time they were painting exquisite pictures of animals on the walls of caves and carving or sculpting figurines out of stone or bone, they had marked themselves out uniquely from other animals. Their transformation was slow in the early years, but it was set to gather incredible momentum over millennia. Humans had become the only animals with a history.

**Discovering history**

The early development of human cultures and societies presents a particular problem to historians. The first writing was not invented until quite late in the human story—about 5,000 years ago. Traditionally, the period before writing tended to be dismissed as "pre-history," since it left no documents for historians to study. However, in recent years a wide range of new scientific methods—including the study of genetic material and radiocarbon dating of organic remains—have been added to the long-established techniques of archaeology, enabling scholars to shine at least a flickering light upon the pre-literate era.

The narrative of the distant human past is under constant revision as new discoveries and research—its findings frequently disputed—create radical shifts in perspective. The fresh investigation of a single cave, a burial site, or a human skull can still throw large areas of accepted knowledge into question. However, in the 21st century much of the history of early humans can be described with a reasonable degree of confidence.
Nomadic hunter-gatherers
All historians agree that until about 12,000 years ago humans were hunter-gatherers, using stone tools and living in small, mobile groups. This period is referred to as the Paleolithic Era (or Old Stone Age). Humans were a successful species, expanding their numbers to perhaps 10 million and spreading to most parts of the Earth. Generally, they adapted well to the major natural climate changes that occurred over tens of thousands of years, although they were temporarily driven out of northerly areas, such as Britain and Scandinavia, during the coldest phase of what is popularly known as the Ice Age.

Humans existed in an intimate relationship with their natural environment, but their effect on that environment even at this early stage was not necessarily benign. There is a disturbing coincidence between the spread of human hunters across the planet and the extinction of megafauna such as woolly mammoths and mastodons. Although human hunting is far from being identified as the sole cause of these extinctions—natural climate change may well have been a contributing factor—from our modern perspective they can seem to set a troubling precedent.

The farming revolution
The hunter-gatherer lifestyle, which can reasonably be described as “natural” to human beings, appears to have had much to recommend it. Examination of human remains from early hunter-gatherer societies has suggested that our ancestors usually enjoyed abundant food, obtainable without excessive effort, and suffered very few diseases. If this is true, it is not clear what then motivated so many human beings all over the world to settle in permanent villages and develop agriculture, growing crops and domesticating animals: cultivating fields was grindingly hard work, and it was in farming villages that epidemic diseases first took root.

Whatever its immediate effect on the quality of life for humans, the development of settlements and agriculture indisputably led to a high increase in population density. Sometimes known as the Neolithic Revolution (or New Stone Age), this period was a major turning point in human development, opening the way to the growth of the first towns and cities, and eventually leading to settled “civilizations.”
Modern humans are the only truly global mammal species. Since evolving in Africa around 200,000 years ago, *Homo sapiens* has rapidly expanded across the world—testament to our species’ curiosity in exploring its surroundings and creativity in adapting to different habitats. In particular, many researchers think that humans’ ability to exploit coastal environments was key to their rapid spread along the southern coasts of Asia. Even the radically different flora and fauna of Australia proved no barrier; humans may have arrived on the continent as early as 60,000 years ago.
Remains of *Homo floresiensis* were found on the Indonesian island of Flores in 2003. Some studies suggest that its small size was due to disease rather than indicating a new species.

years ago, although the earliest dates are controversial. Small groups may have visited much earlier, but the bulk of the evidence suggests widespread colonization of Australia only around 45,000 years ago, at much the same time as *Homo sapiens* arrived in Europe.

**Other hominin species**

*Homo sapiens* was the first hominin to arrive in Australia. However, in parts of Eurasia, humans did face competition. By the time humans reached Europe, Neanderthals had already been there for around 250,000 years, having evolved from an ancestor they shared with modern humans, *Homo heidelbergensis*, and they were well adapted to life in the region.

Further east, at Denisova Cave in Russia’s Altai Mountains, there is evidence of a mysterious species—the Denisovans—known only from their DNA. And on the island of Flores in Southeast Asia, fossils of another possible species—the short, small-brained *Homo floresiensis*—date from just 18,000 years ago, although some researchers believe these were simply modern humans afflicted with some form of disease.

Of all these species, *Homo sapiens* is the only one to have survived and gone on to colonize the New World. Beringia, a landbridge between Russia and Alaska, exposed when sea levels dropped as a result of the Ice Age, allowed humans to reach the Americas from northeast Asia. The exact date remains controversial: stone tools from the c.13,000-year-old “Clovis culture” were once thought to have belonged to the earliest humans in the New World. Older sites are now known, but many of the earlier dates, particularly in South America, remain highly contentious.

**The social network**

Until more evidence is found, the fates of the Denisovans and *Homo floresiensis* remain unknown, while the most recent research suggests Neanderthals died out around 40,000 years ago. Many researchers believe the resourcefulness of *Homo sapiens* was crucial to its success in other species’ home territories in the face of climate change around the time of the Last Glacial Maximum. In particular, it is thought that they could also rely on more extensive social networks than those other species—an asset that would have proved crucial both to survival in lean times and to helping them colonize the unfamiliar environments they encountered as they expanded across the globe, perhaps following animal herds.

---

**Homo sapiens: the only remaining hominin**

There is no evidence of violence between humans and other species. Indeed, modern human DNA shows small traces of Neanderthal and Denisovan genes, suggesting that a few individuals from each species interbred, albeit rarely.

Although Neanderthals were skilled manufacturers of stone tools and excellent hunters, modern humans may have been quicker to adapt, and therefore better able to cope with the rapid climatic changes occurring as the Ice Age progressed. They developed new stone tools, as well as techniques that made use of resources such as bone and antler. They also established extensive networks of support, enabling various groups to pool resources across large distances, enhancing their chances of survival. This cultural adaptability may have been what allowed humans to outcompete their cousins for access to increasingly unpredictable resources.

The human blitzkrieg across America testifies to the incomparable ingenuity and the unsurpassed adaptability of *Homo sapiens*.

EVERYTHING WAS SO BEAUTIFUL, SO FRESH
CAVE PAINTINGS AT ALTAMIRA (c. 40,000 YEARS AGO)
The Altamira cave complex, near Santander on the northern coast of Spain, comprises a series of passages and chambers extending for nearly 984ft (300m) that boast some of the best examples of Stone Age, or Paleolithic, cave art yet discovered. So impressive are the paintings that when the cave was discovered in 1880, they were widely considered fakes and took nearly 20 years to be accepted as the genuine creations of prehistoric hunter-gatherers. Some of the early artistic activity here may date from more than 35,000 years ago, although most of the famous paintings were probably created much later, around 22,000 years ago. These include the images in the famous Bison Chamber: here the low ceiling is covered in representations of animals including multicolored, lifelike images of bison, expertly painted across the natural undulations of the rock in such a way as to make them appear almost three-dimensional.

The artistic impetus
Other stunning displays of cave art are also known, concentrated in southwest France and northern Spain. They include not only finely detailed images of animals, but also engraved and painted signs, symbols, and handprints. Archaeologists remain divided over the meaning and function of Stone Age art. One explanation is simply that these people appreciated the aesthetic qualities of art—just as their descendants do today. Others suggest that the incredible detail of some of the images—the sex of the animal or the season in which it was observed can still be determined, for example—may mean the paintings were a means of conveying vital survival information, such as which animals to hunt, and when and how they could be found and targeted.

Hunting rituals
Alternatively, cave art might be linked to the world views or religions of Paleolithic people. Even today, many societies still living mainly by hunting and gathering share animistic beliefs, meaning they believe entities such as animals, plants, and parts of the landscape have spirits with which humans interact during their daily life. Many such societies’ religious specialists, or shamans, believe

Paleolithic culture

**BEFORE**

c.45,000 years ago Modern humans arrive in Europe.

c.40,000 years ago The earliest currently known examples of art in Europe are made, such as the sculpture of the Lion Man of Hohlenstein-Stadel, Germany.

**AFTER**

c.26,000 years ago A triple burial is carried out at Dolní Věstonice, in the Czech Republic.

c.23,500 years ago The Arene Candide “prince” is buried in Italy, richly adorned with dentalium shell jewelry.

c.18,000 years ago The last Ice Age reaches its height.

Foraging lifestyles rely on the hunting and gathering of natural resources.

Humans develop an intimate knowledge of animal and plant species and their environment.

Beliefs and practices emphasizing connectedness and communication start to develop.

The first examples of art, such as the cave paintings at Altamira, appear.
The undulating structure of the rock cave at Altamira enhances, rather than detracts from, the art, with the animals in the Bison Chamber acquiring an almost three-dimensional quality.

with only a lamp filled with animal fat might have been a form of initiation test for young people—one that would have required a great deal of courage to endure.

Burials and the afterlife
More evidence of human beings engaging in religious or ritual practices at this time comes from burials. At the site of Dolní Věstonice, in the Czech Republic, for example, three bodies were buried together in a sexually suggestive pose, with one of the male individuals flanking a female skeleton reaching toward her pelvis, and the male on the other side buried face down. A red pigment known as ochre had been sprinkled across their heads and across the female’s pelvis. Interestingly, all three individuals

they are able to communicate with these spirits to help sick or injured people, and historically, rock art has been created by shamans during states of altered consciousness, or trances, as part of this communication, leading some researchers to suggest that Paleolithic societies may have had similar beliefs. Shamans are also often thought to be able to transform themselves into animals to encourage them to give themselves up to the hunter, which could also explain depictions combining human and animal characteristics, such as the Lion Man of Hohlenstein-Stadel, in Germany, or the Sorcerer of Les Trois Frères Cave in France, a human-like figure with antlers.

Creating images of animals may have also been part of “magic” rituals designed to improve the chances of success during hunting. For societies dependent on animal resources for a significant part of their diet, the importance of such rituals cannot be overstated.

Initiation ceremonies
Other researchers have noted that many of the handprints and footprints found beside the art in the caves seem to belong to quite young individuals. Traveling down into dark, damp, and potentially dangerous caves

People everywhere and throughout time have shared the basic instinct to represent themselves and their world through images and symbols. Jill Cook

Ice Age Art (2013)
share the same rare skeletal deformities and may therefore have been related. Although the reasons why these bodies were arranged this way will probably always be a mystery, it is clear that there was more to this burial than just the functional disposal of remains.

At other sites, some individuals were buried with many “grave goods”—for example, the complex jewelry made from dentalium shells at Arene Candide, in Italy, and the striking spears fashioned from mammoth ivory at the burial site of two young children in Sunghir, in Russia. Some researchers have suggested that these richly adorned individuals—especially the young ones, who would not have had time in their short life to establish a reputation for special treatment in death—imply that hierarchies and status distinctions were beginning to develop in some groups. However, they do not appear to have become widespread until much later. It is clear, however, that for the first time, people were now increasingly concerned with what happened after death, and about how the dead should enter into the afterlife.

**Marking territory**

Other researchers note that most “classic” Paleolithic cave art is concentrated in southwest France and northern Spain. This region would have been a relatively favorable place to live: even at the height of the Last Glacial Maximum, more southerly, warmer climates and hence more productive habitats attracted dense herds of animals. As a result, people may have lived here in fairly large numbers, packed closely together, leading to greater social tensions among groups vying for territory and resources.

Just as human groups today—whether it be football supporters or nation states—use symbols such as flags, costumes, and markings of borders, territories, and group identities, so European Paleolithic groups may have decorated caves for similar reasons at a time when there was the potential for intense competition for resources.

**Cooperation to survive**

Such complex social interactions may help explain how *Homo sapiens* was able to survive in the harsh environments of Ice Age Europe. Hunter-gatherers probably lived in small groups scattered at relatively low densities across the landscape. Most archaeological sites from this time do not demonstrate any evidence of complex buildings or structures, suggesting that people moved around a lot, according to the weather and the local environment, often following large herds of animals like reindeer as they migrated with the seasons. *Homo sapiens*’ ability to forge new relationships readily allowed groups of hunters to combine as and when necessary. When resources were plentiful, they would hunt together—for example, intercepting migrating herds of reindeer at places in the landscape where they were most vulnerable, such as in

---

**Historians are still unsure** whether or not there are precise meanings behind the majority of cave art. Their best guesses are that they may relate to any one or more of several possibilities: art for art’s sake; spirituality; initiation rites; the marking of territory; and a method of imparting valuable information about hunting.
narrow valleys or at river crossings. In leaner times, these groups would split up again and range far across the landscape to find enough wild resources to sustain themselves.

**Early technologies**

These hunter-gatherers expended considerable effort on hunting technology, since it could spell the difference between life and death. They hafted elaborately worked stone tips on to spears that were then launched at the target using atlatls, or spear-throwers, designed to increase the distance over which a spear could travel and the force with which it hit its target. These tools were crucial to hunting success, so it is no surprise that some of these atlatls were beautifully carved and decorated, often with representations of the animals being hunted. Similarly, they also painstakingly carved complex barbed harpoons from bone and antler for fishing.

**First seeds of a society**

Delicately worked bone awls and needles suggest Stone Age humans also made warm clothes out of animal skin and fur with much more care than their predecessors, and they made many other items—from jewelry finely crafted from animal teeth and shell, to figurines carved from stone or sculpted from clay. Many of these may also have been traded, gifted, or exchanged with individuals from other groups as part of large-scale social networks.

The unpredictable environments of Europe during the Last Glacial Maximum meant sharing resources with other groups in times of plenty could pay off significantly at a later date: if a group struggled to find resources in one area, others elsewhere who had previously benefited from their generosity would be more inclined to return the favor. These kinds of exchange relationships probably linked even very far-flung groups together into complex networks of individual and group relationships that were fundamental to survival in such a tough environment.

**Venus figurines**

Figurines of women carved or sculpted from stone, ivory, or clay are a type of Paleolithic art found widely across Europe. These figurines share many striking similarities. While details such as facial features and feet are largely ignored, feminine sexual characteristics (breasts, belly, hips, thighs, and vulva) are often exaggerated. The focus on features related to sexuality and fertility, and the round body shapes depicted (during the Ice Age fat would have been a precious commodity) suggest that the figurines may have played a symbolic role as a charm relating to childbirth or, more generally, fertility.

Some researchers believe that the figures represent a “mother goddess,” but there is no real evidence for such an interpretation. Others have focused instead on the fact that the figurines demonstrate widely shared cultural ideas and symbols. These would have been crucial to social interactions and exchanges of resources, information, and potential marriage partners in the Ice Age world.

**Hunting tools**, such as this spear-thrower, were often carved in the shape of the animals they were used to kill, probably as a sort of “magic ritual” to improve chances of success in the hunt.

Climate change

BEFORE
- c.2.58 million years ago The Pleistocene, or Ice Age, begins.
- c.200,000 years ago Homo sapiens emerges as a species.

AFTER
- c.9700 BCE The Pleistocene ends, marking the beginning of today's relatively warm and stable climates—the Holocene.
- c.9000–8000 BCE Agriculture becomes established in the Near East.
- c.5000 BCE Sea level reaches near-modern levels; low-lying land is submerged.
- c.2000 BCE The last mammoths are thought to have died out, on Wrangel Island, Russia.

Scientists have only recently begun to appreciate how the two-way relationship that exists between humans and our environments has affected the development of our societies. Humans evolved during the last Ice Age, living through periodic shifts between very cold climatic conditions (glacials) and warmer periods more like those of today (interglacials). However, toward the end of the Ice Age, these shifts became more pronounced and occurred at shorter intervals, culminating around 21000 BCE in a “Big Freeze,” a period of intense cold known as the Last Glacial Maximum. People and animals living in northern regions died out or retreated south as ice caps expanded to reach southern

Climate change results from shifts in the earth’s position and orientation relative to the sun.

The Big Freeze expands ice caps, lowering sea levels.

Habitats change, and plant and animal species’ ranges alter for survival.

Animals and humans colonize newly exposed low-lying land, only to be isolated when sea levels rise again.

Human groups are faced with new opportunities and constraints.
An entire mammoth was unearthed in Siberia, Russia, in 1900—the first complete example ever found. A cast of it is on display in St. Petersburg’s Natural History Museum.

England. Such huge amounts of sea water froze that sea levels dropped, exposing low-lying land such as Beringia, the continental shelf that connects North America and Asia—and the route by which humans first reached the Americas.

Rising temperatures
Temperatures eventually rose again, and today’s relatively warm and stable climate had become established by around 7000 BCE. The ice caps melted, and rising sea levels separated Eurasia from the Americas, turned Southeast Asia into an archipelago, and made islands out of peninsulas such as Japan and Britain, thereby isolating many human groups. The impact on ecosystems was particularly severe for the large animals known as megafauna—mammoths, for example. The open glacial steppe grasslands in which megafauna thrived were replaced by expanding forests, and across the globe the combination of environmental change and human hunting drove many species to extinction.

The forests and wetlands of the new post-glacial world offered humans many new opportunities. They hunted large forest animals such as red deer and wild boar, as well as smaller mammals like rabbits, and they foraged for a range of aquatic and coastal food sources. Migratory fish like salmon, sea mammals such as seals, and shellfish, seasonal wildfowl, and a range of fruits, tubers, nuts, and seeds all became important dietary staples.

Changing lifestyles
In areas that were particularly rich in natural resources, human groups may not have settled in one place, sending small bands on forays further afield to target specific resources. The Natufian communities of the Eastern Mediterranean, for example, were able to exploit abundant stands of wild cereals in the Near East. Some groups began to manipulate their environments, burning vegetation and cutting down trees to encourage their preferred plant and animal species to thrive. They started to select and care for productive plant species and sowed the seeds of favored strains, while managing and controlling certain animals. This manipulation led to these species becoming ever more reliant on human input—and to the development of agriculture, a radical change in the human way of life that has since resulted in even more dramatic human impact on the environment.

Ice cores and past environments
Paleoclimatologists study the elemental composition of the sediments laid down over time on ocean floors to understand how climates have changed in the past. Tiny sea creatures known as foraminifera absorb two different forms of oxygen, $^{16}$O and $^{18}$O, from sea water. Because $^{16}$O is the lighter of the two, it evaporates into the air more easily, but during warmer periods it falls as rain and drains back to the sea. So $^{16}$O and $^{18}$O exist in sea water and appear in the shells of foraminifera, in roughly equal ratios. However, in cold conditions most of the evaporated $^{16}$O does not return to the ocean but freezes as ice, so sea water contains more $^{18}$O than $^{16}$O. When foraminifera die, their shells sink to the ocean floor, building up over time. Paleoclimatologists drill into the ocean floor to extract cores of sediment and study the changing proportions of $^{16}$O and $^{18}$O in different layers to see how climates have changed over time.

Few humans have ever lived in a world of such extreme climatic and environmental change.

A GREAT CIVILIZATION AROSE ON THE ANATOLIAN PLAIN
THE SETTLEMENT AT ÇATALHÖYÜK (10,000 YEARS AGO)

IN CONTEXT
FOCUS
Neolithic revolution

BEFORE
11000–10000 BCE There is evidence of cultivation of crops and domestication of animals in West Asia.
C.9000 BCE Maize farming begins in Mesoamerica.
C.8800 BCE Farming lifestyles are well established across West Asia.

AFTER
8000 BCE Cultivation and domestication begin in East Asia.
7400–6000 BCE The town of Çatalhöyük is established.
7000–6500 BCE Agriculture spreads west into Europe via Cyprus, Greece, and the Balkans.
3500 BCE The earliest cities are built in Mesopotamia.

The Neolithic town of Çatalhöyük on the Konya Plain in Turkey was discovered by James Mellaart in the 1960s. It has become one of the most famous archaeological sites in the world due to its size, density of settlement, spectacular wall paintings, and evidence of complex religious and ritual behavior.

Since its discovery, several other large settlements across West Asia have been found that attest to the growing scale of human communities during the shift from foraging to agricultural lifestyles, or “Neolithic revolution,” that occurred between around 10000 BCE and 7000 BCE. Whether rising populations forced people to find...
This illustration shows the way in which humans lived and worked close to each other at the Çatalhöyük site, with their domesticated animals also kept nearby.

Humans. It is not clear whether these decorated skulls, statues, and figurines represent specific individuals or heads of households or lineages, or perhaps mythical ancestors or gods, but they may have been part of the communal ideologies, rituals, and social practices that helped smooth over tensions between individuals and broader regional groups, who were establishing more formal links with one another for long-distance trade and exchange of goods. Some of the success of Çatalhöyük may have been due to its role as a center for the large-scale trade of items made from the obsidian, or volcanic glass, of Hasan Dağ.

The many dramatic social and economic changes that came with the Neolithic revolution have helped shape both human history and the world’s ecosystems ever since.

Community cohesion
It is thought that the development of more formal religious organization and group ritual practices may have helped community cohesion. At many sites, buildings were set aside for such purposes; these were larger than domestic structures, with unusual features such as lime plaster benches and more evidence of symbolic and representational art: Çatalhöyük boasts murals and figurines of a range of subjects including wild animals such as bulls, leopards, and vultures. At many sites, some inhabitants remained in the community even when they died; they were buried under the floors of the houses. Sometimes they were later dug up and their skulls removed; facial features were molded on some in plaster and painted with ochre for display. At sites like Ain Ghazal in Jordan, large statues made of lime plaster have been found, and there are many examples of clay figurines of animals and (mainly female) humans. It is not clear whether these decorated skulls, statues, and figurines represent specific individuals or heads of households or lineages, or perhaps mythical ancestors or gods, but they may have been part of the communal ideologies, rituals, and social practices that helped smooth over tensions between individuals and broader regional groups, who were establishing more formal links with one another for long-distance trade and exchange of goods. Some of the success of Çatalhöyük may have been due to its role as a center for the large-scale trade of items made from the obsidian, or volcanic glass, of Hasan Dağ.

The many dramatic social and economic changes that came with the Neolithic revolution have helped shape both human history and the world’s ecosystems ever since.

Farming and health
The adoption of farming established a plentiful and stable long-term source of food, allowing for population growth. However, there were negative consequences, too. Farmers may have had to work harder at times than hunter-gatherers did, and their more limited diets—focused on just a few crops and animal species—led to nutritional deficiencies.

The health of early farmers also suffered in other ways. Living at close quarters with animals meant that some animal diseases spread to humans—for example, smallpox, anthrax, tuberculosis, and the flu. Larger communities living at higher densities allowed for such diseases to be more easily passed around. It also caused problems in disposing of human and animal waste and thus arose in intestinal complaints and waterborne diseases such as cholera and typhoid, while irrigation created breeding grounds for mosquitoes and parasites, infecting humans with diseases like malaria.
ANCIENT CIVILIZATIONS
6000 BCE – 500 BCE
About 5,000 years ago, humans began to form societies of unprecedented complexity. These “civilizations” typically had state structures and social hierarchies, they built cities and monuments such as temples, palaces, and pyramids, and used some form of writing. The basis for the development of civilizations was progress in agriculture. When only part of the population was required to work in the fields to produce food, the rest could inhabit towns and palaces, performing a range of specialty functions as bureaucrats, traders, scribes, and priests. The invention of civilization undoubtedly raised human life to a new level in many ways—in technology, the arts, astronomy, the measurement of time, literature, and philosophy—but also established inequality and exploitation as the basis of society, leading to larger-scale warfare as states expanded into empires.

**Emerging civilizations**
The earliest civilizations developed in areas where it was possible to practice intensive agriculture, usually involving use of irrigation systems—for instance, along the rivers of the Tigris and Euphrates in Mesopotamia (modern Iraq), the Nile in Egypt, the Indus in northern India and Pakistan, and the Yangtze and Yellow rivers in China. Although these civilizations of Eurasia and North Africa seem to have been founded independently of one another, they developed multiple contacts over time, sharing ideas, technology, and even diseases. All followed a pattern in which stone tools (the Stone Age) were replaced by bronze (the Bronze Age) and then predominantly iron (the Iron Age). In the Americas, where the Olmec and Maya developed the civilizations of Mesoamerica, the use of stone tools persisted and most of the epidemic diseases that plagued Eurasia were unknown.

**Writing and philosophy**
From around 1000 BCE, Eurasian civilizations found an innovative momentum. The use of writing evolved from practical record-keeping to the creation of sacred books and classic literary texts that embodied the founding myths and beliefs of different societies, from the Homeric tales in Greece to the Five Classics of Confucianism in China and the Hindu Vedas in India. Forms of writing using an alphabet developed in the eastern
Mediterranean region and were spread by the Phoenicians—a race of traders and sailors.

The Greek city-states became a test-bed for new forms of political organization, including democracy, and the source of new ideas in the arts and philosophy. The influence of Greek culture spread as far as northern India, while India itself was the birthplace of Buddhism—the first “world religion,” winning converts beyond its society of origin.

**Growing populations**

The ancient world reached the peak of its classical period around 2,000 years ago. The world’s population had grown from around 20 million at the time of the first civilizations to an estimated 200 million. About 50 million of these lived in a united Han China, while about the same number were under the governance of the Roman Empire, which had extended its rule to the shores of the Atlantic and the borders of Persia. In large part, the empires were successful because of efficient communications by land and water, and the ruthless deployment of military power. Long-distance trade routes linked Europe to India and China, and cities had expanded to a great degree—Rome’s population was estimated at over 1 million.

**Civilizations in decline**

The causes of the decline of these powerful classical empires from the 3rd century CE have long been disputed among historians. Bred in overcrowded cities and transmitted along trade routes, epidemic diseases certainly played a part. Internal power struggles were also a major factor, leading to political fragmentation and a decline in the quality of government. But perhaps most crucial was the geographical limitation of the civilized areas of Eurasia. Both the Roman and Han empires built walls to mark and defend the borders of their empires, beyond which lived mostly nomadic or semi-nomadic “barbarian” tribes. The civilized societies had little or no military advantage over these peoples, who increasingly raided or settled within their territories. The eastern part of the Christianized Roman Empire survived until 1453, and Chinese civilization revived to full vigor under the Tang dynasty from 618, but Western Europe would take centuries to recover the levels of population and organization that it had known under the rule of Rome.
TO BRING ABOUT THE RULE OF RIGHTEOUSNESS IN THE LAND
THE LAW CODE OF HAMMURABI (c.1780 BCE)

IN CONTEXT
FOCUS
Origins of civilizations

BEFORE
C.5000 BCE Copper and gold smelting is common in Mesopotamia and beyond.
C.4500 BCE Uruk in Mesopotamia is the first settlement large enough to be called a city.
C.3800 BCE Upper and Lower Kingdoms of Egypt established along the Nile Valley.
C.3500 BCE Development of the Indus Valley civilizations.
C.3350 BCE Stone circles erected in west and north Europe.
C.2000 BCE Shang dynasty builds the first cities in China.

AFTER
C.1500 BCE Rise of Olmec culture in Mesoamerica.
C.600 CE Emergence of the Mayan civilization.

In 1901, a six-foot-tall slab of black stone was found in the ruins of the city of Susa. Carved onto its face were 280 “judgments,” or laws, constituting the earliest known written legal code in history. The slab had originally been erected in Babylon, in around 1750 BCE, by Hammurabi, one of the greatest kings of ancient Mesopotamia.

Hammurabi writes a new code of law to cement his control over the region.

Need grows for tools of governance: laws, permanent records, and judiciary.

Cylinder seals (to control transactions), writing, judicial institutions, and written laws develop.

Agriculture, population, and urbanization increase.

Local networks break down and mechanisms for dispute resolution weaken.

Bronze Age Revolution
Mesopotamia, which means “between two rivers,” lies between the Euphrates and the Tigris, and it is considered to be the first human civilization ever. Its writing, math, and astronomy were also the first known, and its cities arguably the world’s first true examples. Growth of its population and wealth led to
the emergence of a hierarchy in society, led by rulers, courtiers, and priests at the top, through merchants and artisans, to servants and laborers at the bottom. This is often referred to as “specialization”: members of society having different tasks, rather than all producing food as had been the case in previous subsistence societies.

Mesopotamian communities coordinated manpower to build large structures such as defensive walls and huge temples, and to mobilize armies. They utilized hydrological engineering to divert river water and irrigate the alluvial floodplains. Administrative needs such as bookkeeping led to the development of cuneiform writing, the first known script, and of complex mathematical concepts such as fractions, equations, and geometry. Sophisticated astronomy developed for calendric purposes. Sometimes called the Bronze Age Revolution, this great step forward can be seen as the most important change in the human world before the Industrial Revolution.

Mesopotamian unification

For much of the 4th to the 2nd millennia BCE, Mesopotamia was a mosaic of competing kingdoms and city-states such as Uruk, Isin, Lagash, Ur, Nippur, and Larsa. Hammurabi, the Amorite king of Babylon, unified the region through a combination of guile, diplomacy, opportunism, military might, and longevity. As was traditional with conquering kings, Hammurabi used previous edicts as the basis for his laws, but these laws were distinguished by the reach of his empire, and by the fact that they were inscribed on stelae (stone slabs), and so recorded in perpetuity.

Hammurabi’s laws and their detailed prelude reveal much about life in what is known as the Old Babylonian Period. They contain judgments on matters ranging from property disputes and violence against the person, to runaway slaves and witchcraft.

Hammurabi’s legacy

Although Hammurabi’s laws seem to have carried little weight and were rarely followed at the time, and despite the fact that his empire disintegrated soon after his death, his reign was a turning point for southern Mesopotamia. He firmly established the ideal of a unified state, centered in Babylon, and his laws were copied by Mesopotamian scribes until at least the 6th century BCE. They show many points of similarity with, and may have influenced, laws of the Hebrew Bible, which in turn influence laws in many societies today.
ALL THE LANDS HAVE FALLEN PROSTRATE BENEATH HIS SANDALS FOR ETERNITY

THE TEMPLES OF ABU SIMBEL (c.1264 BCE)

Around 1264 BCE, the Egyptian pharaoh Ramesses II (c.1278–1237 BCE) had two mighty temples hewn out of the cliffs on the west bank of the Nile in southern Egypt. The entrance was guarded by four vast statues of the pharaoh, seated in glory and wearing the symbols of divine kingship, including the double crown that signified his authority over Upper and Lower Egypt. The temples were designed to signify and embody the unique status, ambition, and power of the ancient Egyptian pharaohs.

The pharaonic tradition
Ramesses II inherited a tradition that was already very ancient: about 1,800 years earlier, King Narmer (called Menes by the ancient Greek historian Herodotus) first unified the kingdoms of the Upper (southern) and Lower (northern) Nile. Narmer’s deeds were recorded on a stone palette, which was recovered from a temple at Hierakonpolis in the 19th century and provides one of the earliest known depictions of an Egyptian king. The palette is inscribed with many of the symbols and traditions that would come to typify the pharaohs for the next three millennia. For instance, Narmer is shown holding an enemy by the hair, about to smite him, and Ramesses II was often depicted in the same way—military might and supernatural strength were hallmarks of Egyptian kingship. The pharaoh, like the gods, was frequently shown much larger than ordinary mortals.

The geographical situation of Egypt—with its stark contrasts between the fertile Nile Valley and its delta, which empties into the

IN CONTEXT

Pharaonic Egypt

BEFORE
- c.3050 BCE Narmer unifies the kingdoms of Upper and Lower Egypt.
- c.2680 BCE Khufu begins construction of the Great Pyramid in Giza—it is the largest pyramid in history.
- c.1480 BCE Thutmose III conquers Syria, extending his empire as far as the Euphrates.

AFTER
- c.1160 BCE Ramesses III fights off invasions of Egypt by Libyans and raiding tribes known as the Sea People.
- c.1085 BCE Collapse of the New Kingdom; Egypt is divided with Libyan rulers in the north and Theban priest-kings ruling in the south.
- 7th century BCE Egypt is invaded by Assyrians and then Persians.

The magnificent temple complex at Abu Simbel was, remarkably, moved 656 ft (200 m) inland and 213 ft (65 m) higher up in 1964–68 to rescue it from the rising waters of the Nile during the construction of the High Aswan Dam.
north into the Mediterranean Sea, and the surrounding expanses of uninhabitable desert—gave rise to the kingdom’s unique culture and civilization. The pharaoh was viewed as a living god who could control the order of the cosmos, including the annual flooding of the Nile, which brought fertilizing silt to replenish the soil. Pharaohs were also often depicted as farmers in agricultural scenes, representing their role as guardians of the land.

**The Old Kingdom**
The Old Kingdom that followed Narmer was ruled by a succession of dynasties that were led by powerful pharaohs, who channeled the bureaucratic and economic might of the unified kingdom into monumental building projects, such as the construction of the pyramids. These, in turn, stimulated scientific, technological, and economic development, increasing trade with other kingdoms in the Near East and the Mediterranean. In the Old Kingdom the predominant gods were Ra, the sun god; Osiris, the god of the dead; and Ptah, the creator. In the Middle and New Kingdoms that followed, which were ruled by families from Thebes, Amon became the main deity. As supreme ruler, the pharaoh was closely associated with the gods, and was believed to be the living incarnation of certain deities.

**The New Kingdom**
In the 23rd century BCE, the Old Kingdom collapsed. After what is known as the Intermediate Period, the Middle Kingdom dynasties restored unified control of Egypt from 2134 BCE until around 1750 BCE, when they were invaded by the Hyksos (probably Semites from Syria). The Hyksos, in turn, were expelled from Egypt in about 1550 BCE, with the XVIII dynasty—arguably the greatest and most important—coming to power and establishing the New Kingdom. By this time, immortality was believed to be available not just to the pharaoh, but to priests, scribes, and others who could afford offerings, spells, and mummification, and many tombs were dug into the Valley of the Kings to be filled with extraordinarily rich grave goods.

Under expansionist pharaohs, such as Thutmose III and Ramesses II, Egyptian control was extended into Asia as far as the Euphrates River, and up the Nile into Nubia. It was no coincidence that Ramesses built Abu Simbel in Nubia: as well as representing the divine glory of Egypt’s pharaohs generally, the temple was a symbol of Ramesses’ control over the recently conquered territory.

---

I, [the creator], give you Ramesses II, constant harvests... [your] sheaves are as plentiful as the sand, your granaries approach heaven and your grain heaps are like mountains.

**Inscription in temple at Abu Simbel, c.1264 BCE**

---

The Nile Valley is bordered by inhospitable desert, but is highly fertile because the longest river in the world flows through it and irrigates it.

A sophisticated, coherent, and unified civilization develops over a vast stretch of terrain.

Trade and conquest boost the economy and population levels. A large, prosperous kingdom emerges.

Vast monuments, such as the Abu Simbel temple complex, are constructed, reflecting Egypt’s power, wealth, and belief systems.

SIDDARtha GAUTAMA PREACHES BUDDHISM (C.500 BCE)

IN CONTEXT
FOCUS
The spread of Buddhism
BEFORE
1200 BCE Vedic (aka Aryan) culture extends across northern and central India.
1200–800 BCE Oral Vedic traditions are written down in Sanskrit as the Vedas.
c.600 BCE The Mahajanapadas, the 16 competing kingdoms of Vedic India, emerge.
AFTER
322 BCE Chandragupta Maurya founds the Mauryan Empire.
3rd century BCE Sri Lanka converts to Buddhism.
185 BCE The Mauryan Empire collapses.
1st century CE Buddhism arrives in China and Japan.
7th century Buddhist missionaries are invited to establish a monastery in Tibet.

Siddartha Gautama, better known as the Buddha, was born at the end of the Vedic Age (1800–600 BCE) into a South Asia in transition. In the country's caste system, the priestly Brahmins and the warrior-elite Kshatriyas ranked highest, and it was into this latter group that Siddartha Gautama was born.

India was then a ferment of sects and new ideologies, some of which espoused a philosophy renouncing the material world. Siddartha developed a similar philosophy based on mystical Hinduism, but he also rejected the increasingly rigid strictures of Vedic ritual and the inherited piety of the Brahmins. Renouncing material possessions, he sought and eventually found enlightenment, and became the Buddha. He preached in northeast India and founded the Sangha—the monastic order of Buddhism—to continue his ministry.

Siddartha rejects material life and preaches Buddhist philosophy.

Ashoka the Great conquers India and unifies the empire.

Ashoka makes Buddhism the state religion and spreads it across South and East Asia.

After the collapse of the Mauryan Empire, Buddhism declines in India.

Buddhism flourishes in Sri Lanka, Southeast Asia, China, Japan, Tibet, and Central Asia.
For the next two to three centuries, Buddhism remained one among several minor sects but, under the Mauryan emperor Ashoka the Great (304–232 BCE), it became India’s state religion. Ashoka’s reign had proceeded initially through bloody conquest, but in around 261 BCE he had a change of heart. From then he embraced a new model of kingship and religious philosophy based on a creed of tolerance and non-violence.

He extended Mauryan control and, his Buddhism proving a powerful unifying force, succeeded in joining all of India, except the southern tip, into an empire of 30 million people. A world religion

Having established Buddhism as the state religion, Ashoka founded monasteries, and sponsored scholarship. He sent Buddhist missionaries to every corner of the subcontinent and abroad as far as Greece, Syria, and Egypt. His missions established Buddhism initially as an elite pursuit, but the religion went on to take root at all levels of society in Sri Lanka, Southeast Asia, along the Silk Road in the Indo-Greek kingdoms (in modern-day Pakistan and Afghanistan), and later in China, Japan, and Tibet. In India—its birthplace—Buddhism started to decline after Ashoka’s death in 232 BCE, affected by a resurgence of Hinduism and then the arrival of Islam. Outside India, however, its tradition and scholarship flourished, evolving into multiple strands including Zen Buddhism, Theravada or Hinayana Buddhism, Mahayana Buddhism, and Varayana Buddhism.

The first religion to have spread widely beyond the society in which it originated—so the first “world religion”—Buddhism is also one of the oldest, having been practiced since the 6th century BCE.

1900 CE Arthur Evans begins the excavation of Knossos.
1908 Italian archaeologist Luigi Perrier discovers the Phaistos disc.

In the 1890s, British historian Arthur Evans came across some ancient clay seals for sale in Athens. They originated from the relatively unexplored Mediterranean island of Crete, and for Evans they offered a tantalizing hint at the existence of the first writing system in Europe.

Following the seals to their Cretan source, Evans decided to excavate a promising parcel of land at Knossos, in the north of the island, where he uncovered a vast palace complex. The iconography of the palace centered on a bull-cult, including frescoes that depicted the sport of bull-leaping. Evans named the civilization “Minoan” after the mythical Cretan King Minos, who—according to Greek legend—built a labyrinth to contain the Minotaur: a fearsome half-man, half-bull creature. In the process, Evans discovered that the Minoans had indeed invented an early type of alphabet, which he called Linear A.

The Palatial Period
The Minoans were a people of unknown origin (possibly from Anatolia), who settled on Crete in the Neolithic era, in about 7000 BCE. They farmed crops, herded sheep,
and worshipped in caves, on top of mountains, and at springs, but by 2400 BCE they had begun to build large palace complexes. By 1900 BCE, in what is known as the Palatial Period of the Minoan civilization, palaces at Knossos, Phaistos, Malia, and Chania had been constructed in broadly similar forms, with the one at Knossos being the largest. It was destroyed, possibly by fire or perhaps a tsunami, around 1700 BCE, but it was rebuilt soon after on the same site. At its peak, in about 1500 BCE, Knossos palace and the city that grew up around it covered 185 acres (75 hectares) and had a population of up to 12,000.

The Minoan palaces all had large central courts, flanked by many-chambered buildings, and were highly decorated with frescoes of flora and fauna. In the extensive magazines (storehouses), the rulers—who may have served dual roles as priest-kings or priest-queens—gathered many commodities for redistribution. Minoan rulers also controlled trade with other Bronze Age civilizations around the Mediterranean, such as Byblos in Phoenicia (now Lebanon), Ugarit in Syria, pharaonic Egypt, and Mycenaean Greek settlements in the Cyclades and further afield.

**Linear A script**
The Minoans developed their own script, probably initially for record-keeping and administration purposes. It began as hieroglyphic picture-writing, but later evolved into the Linear A syllabary, in which symbols denote syllables (rather than letters, as is the case with the alphabet). The Minoan language as recorded in Linear A script remains undeciphered to this day, but in around 1450 BCE the Minoans were invaded by the Mycenaeans from mainland Greece, who adapted the Minoan script into Linear B, which was used to write archaic Greek.

Not long after the Mycenaeans invaded Crete, Minoan civilization collapsed completely. However, the legacy of Minoan writing lives on through its connection with the Phoenician alphabet, which in turn would come to form the basis of the Latin alphabet that is used in many parts of the world today.

---

**The Phaistos disc**

Found in 1908 in the ruins of the Minoan palace at Phaistos, southern Crete, the Phaistos disc (shown above), made from fired clay and about 6in (15cm) across, is printed with symbols in an unknown script. Although dated to 1700 BCE, it was made using the technique of woodblock printing, which was not thought to have been invented for another 2,000 years or so (in China), making the disc one of the great archaeological mysteries. The symbols, many of which are recognizable as everyday objects, are arranged in a spiral and divided into words by vertical lines. Some scholars have drawn parallels between certain symbols in Cretan hieroglyphics and Linear A, suggesting that the writing on the disc may be an elaborated form of an existing Minoan script. There are many theories about the disc’s significance—some consider the inscription is a hymn to a goddess, others that it tells a story, or that the disc is a calendar or a game. Some experts even believe the disc to be a clever fake.
IN TIMES OF PEACE, SONS BURY THEIR FATHERS, BUT IN WAR IT IS THE FATHERS WHO BURY THEIR SONS

THE PERSIAN WARS (490–449 BCE)

Leonidas of Sparta stood before his band of 300 warriors facing the mightiest army the world had ever seen. The envoy of his enemy demanded that he lay down his arms at the feet of the Persian god-king. “Come and take them” was Leonidas’s laconic reply. The Persian Wars (490–449 BCE), also known as the Greco–Persian Wars, pitted a vast and cosmopolitan empire against a small band of city-states in the south of Greece. The conflict profoundly influenced the development of Classical Greek identity and culture, leaving a vivid trail in Western literature and myth. By contrast, the story of the Persian Achaemenid Empire remains comparatively neglected, belying the significance of that great Middle Eastern civilization.

404 BCE Artaxerxes II becomes ruler of the Achaemenid Empire.
331 BCE Alexander the Great defeats Darius III and conquers the Persian Empire.
312 BCE Persia becomes part of the Seleucid Empire, founded by one of Alexander’s generals.

A hoplite—or Greek citizen-solider—vanquishes his Persian adversary in this decoration inside a 460 BCE wine cup. The winged horse Pegasus adorns the victor’s shield.

Turkey), which brought the Ionian Greeks under Persian rule. Cyrus’s successors Cambyses II and Darius extended the empire into Egypt and the Balkans, where Thrace and Macedon gave the Persians a foothold in Europe.

The Achaemenids established Persian rule as a model for later empires. Despite its vast size, the state embraced a degree of multiculturalism, allowing conquered peoples to keep liberty of religion, language, and culture. There was investment in infrastructure—like
the Romans, the Persians built a network of roads to hold their empire together—and the military, and devolution of administration to local provinces. Under the Achaemenids, the Middle East was united under a single umbrella culture for the first time.

Conflict with the independent Greeks arose after the city-states of Athens and Eretria supported an unsuccessful revolt by the Ionians against Persian rule in 499 BCE. Darius responded by invading mainland Greece, but was defeated by the Athenians and their allies at Marathon in 490 BCE. He planned an even larger invasion, but it was only after his death that his son Xerxes began mustering a huge army to execute the plan.

Father of Lies
The main source for the Greco-Persian Wars is the ancient Greek historian Herodotus of Halicarnassus, known as both the Father of History and the Father of Lies. Herodotus estimated that Xerxes’ land army was made up of 1,700,000 men—but modern historians believe the maximum figure to be closer to 200,000.

The second Persian invasion, in 480 BCE, was held up by the heroic defense of Leonidas and his 300 Spartans at Thermopylae, and by Greek naval resistance at Artemisium. Later the Athenian navy lured the Persian fleet into a trap at Salamis. Xerxes returned to Persia, leaving a large force to carry on the fight, but at the Battle of Plataea in 479 BCE the Greeks, led by the Spartans, crushed the Persians, who also lost to the Spartans at Mycale. Greek success can probably be ascribed to Xerxes’ difficulties in keeping his vast army supplied and supported after naval defeat, although Herodotus ascribed it to the moral superiority of their cause.

The Delian League
The Greeks now began to go on the offensive, forming the Delian League to oppose Persia. In 449 BCE, the Persians finally concluded peace, conceding the independence of the Ionian states.

The Persian War had reinforced Greek identity and bolstered cultural and military confidence, most significantly in Athens. The country’s rising power sparked conflict with Sparta, leading to the Peloponnesian War of 431–404 BCE. The Persian Empire had reached the limits of its expansion, but remained strong until defeated by Alexander the Great in 331 BCE.

Cyrus the Great
The founder of the Achaemenid Empire was Cyrus II, later known as “the Great.” In around 557 BCE, he became king of Anshan, a vassal of the Median king.

According to legend, he won the Persian army’s support by making them spend one day clearing thorn bushes, and the next banqueting, then asking why they remained slaves to the Medes when, by backing his revolt, they could live in luxury.

Some ten years later he had conquered Media, and Sardis and Lydia in Asia Minor. He conquered Babylon seven years after that by diverting the Euphrates and marching his army along the dry riverbed into the great city. This victory brought him the lands of the neo-Babylonian Empire, including Assyria, Syria, and Palestine. He liberated the Jews from their Babylonian bondage and allowed them to rebuild the Temple in Jerusalem. The Greek writer Xenophon saw him as an example of the ideal ruler.

Cyrus died in 530 BCE while on campaign in Central Asia. He was buried in a great tomb inside the royal palace he had built at Pasargadae in Persia.
ADMINISTRATION IS IN THE HANDS OF THE MANY AND NOT OF THE FEW

ATHENIAN DEMOCRACY (c.507 BCE)
The term “democracy” comes from the Greek words *demos* (people) and *kratos* (rule). The democracy that developed in ancient Athens around 507 BCE and flourished in its purest form from 462 to 322 BCE, albeit with some interruptions, provided the model for what has become the dominant form of government in the world: by 2015, 125 of the world’s 195 countries were electoral democracies. The democracy of ancient Athens, however, differed from its modern form, reflecting the history of Athens and the warring Greek states of the age.

Oligarchs and hoplites

After the chaos of the ancient Greek Dark Ages—a period that followed the breakdown of Mycenaean civilization around 1100 BCE and lasted until about the 9th century BCE—most of the emergent city-states evolved into oligarchies, with powerful nobles monopolizing government and serving their own interests. In Athens, the Areopagus—a council and law court consisting of men of aristocratic birth—controlled the machinery of state, appointing officials and serving as a civil court, while the lower classes (*thetes*) were excluded from office. However, the development of the “hoplite” model of citizen-soldiery in the 8th to 7th centuries BCE proved disruptive to those who were in power, as it led to a certain level of egalitarianism. Hoplites were men in the heavy infantry, mainly free citizens, whose primary tactic was the phalanx—a military formation in which soldiers stood in tightly packed ranks, with each man’s shield protecting the hoplite to his left. Any man who could afford the arms and armor would be putting his life on the line to defend the state. As a result, a kind of middle class emerged, which declared that service should bring full citizenship and political representation. At the same time, the lower classes were also making demands, and tensions between them and the higher orders over key issues, such as land reform and debt slavery, threatened to lead to civil breakdown.

Solon and Cleisthenes

In Athens, some of these tensions were eased around 594 BCE by the reforms of the statesman Solon. He
The Parthenon, built in 447–438 BCE as a temple dedicated to the goddess Athena, is often seen as a symbol of democracy and Western civilization. Established a law that declared all citizens could vote in matters of state, and that a law court should admit all citizens. At the same time, however, he mollified the upper classes by introducing a graded oligarchy in which power corresponded to wealth—the aristocracy was to control the highest offices, the middle class the lesser offices, and the poor could be selected by lot to serve on juries.

In the late 6th century BCE, Athens fell under the sway of the tyrant Pisistratus and his sons. In response, a faction of aristocrats led by Cleisthenes allied with lower-ranking members of society to take power. The institution of true democracy in Athens is traditionally dated to this point—around 507 BCE. Cleisthenes introduced true popular government, or direct democracy, enabling all citizens of Athens to vote directly on Athenian policy (unlike in a contemporary representative democracy, in which the people elect representatives to act as the legislature). He also reorganized the citizenry into units by geography rather than kinship, breaking the traditional ties that underpinned Athenian aristocratic society, and established sortition—the random selection of citizens for government positions rather than basing the choice on heredity. In addition, he restructured the Boule—a council of 500, which drew up legislation and proposed laws to the assembly of voters (Ecclesia). In 501 BCE, command of the military was transferred to popularly elected generals (strategoi).

In 462 BCE, Ephialtes became leader of the democratic movement in Athens and, together with his deputy Pericles, he dismantled the Areopagus council, transferring the majority of its powers to the Boule, the Ecclesia, and the citizen courts. Ephialtes was assassinated in 461 BCE and Pericles took over the political leadership, becoming one of the most influential rulers in the history of ancient Greece.

A perfect democracy? Athens now had a genuine direct democracy, but many people were not allowed to participate in the system as they were not considered true citizens. Political rights were restricted to adult male Athenians; women, foreigners, and slaves were not permitted to vote. The limited political reforms of Solon fail to meet the demands of the lower and middle classes. Pisistratus achieves economic reforms, but he does not satisfy continuing demands for political reform.

Cleisthenes implements democracy and other reforms creating a more egalitarian government.
The Athenian constitution relied on a careful separation of powers. This was essential to make the practical operation of direct democracy possible. It also ensured that all citizens (men aged 20 and above) could serve and that power could not be abused.

During the “Pentekontaetia”—the decades between Greek victory in the Persian War (479 BCE) and the start of the Peloponnesian War (431 BCE)—Athens reached the height of its glory. In 447 BCE, Pericles appropriated the treasury of the Delian League (the anti-Persian confederation that had become a vessel for Athenian hegemony) to build a magnificent temple (the Parthenon) on the rocky hill known as the Acropolis. Citizenship of Athens was highly coveted, and in 451 BCE Pericles passed a law restricting it to men whose parents were both Athenians.

A center of philosophy
As well as being the most powerful city-state in ancient Greece, Athens was also the crucible of a revolutionary new direction in philosophy, in large part due to Socrates (c.469–399 BCE). Earlier Greek philosophers, collectively known as the pre-Socratics, had introduced a revolution of their own in human thought in the 5th and 6th centuries BCE. They rejected supernatural explanations for the...
world, the explanatory power of mythology, and the authority of tradition, and set out to discover the origins and workings of the natural world through reason and observation. The pre-Socratic natural philosophers developed theories about the elements, classifications of nature, and mathematical and geometric proofs.

Socrates turned his enquiries inward to more human matters—as Cicero said of him, “he brought philosophy down from heaven.” Socrates’ method was simply to ask questions—What is friendship? What is justice? What is knowledge? The Socratic method tended to lay bare the limits of existing thinking, often making people look foolish or pompous. Accordingly, Socrates was unpopular and eventually he was accused of two crimes by his enemies—corrupting youth by encouraging them to go against the government, and impiety, or lack of respect for the gods. Consequently, he was sentenced to death.

**Socrates’ successors**

The fate of Socrates was taken as an indictment of democracy by his successors, particularly Plato (c.428–348 BCE), who saw him as a martyr for truth. Plato ran a school (the Academy) and developed ideas about universal truths and metaphysics that have shaped all subsequent religion and philosophy in the Western world. His student Aristotle (384–322 BCE) became equally influential, setting up the Lyceum school and writing on such diverse topics as politics, ethics, law, and natural sciences.

Plato opposed democracy, as he believed that the people were not sufficiently equipped with philosophical grace to legislate and if governance were left in the hands of the ordinary, citizen tyranny would emerge. In his ideal republic, enlightened philosophers would rule as kings. He also challenged the basic principle of democracy—that of liberty (*eleutheria*)—which he believed could divert people from the proper pursuit of ethics and cause social disunity.

**The fall of democracy**

During the Peloponnesian War (431–404 BCE), in which Athens was ultimately defeated by the Spartans, Athenian democracy was twice suspended, in 411 and 404 BCE. Athenian oligarchs claimed that

> Dictatorship naturally arises out of democracy, and the most aggravated form of tyranny and slavery out of the most extreme liberty.  
> **Plato**

Athenian oligarchs claimed that

An Audience in Athens (1884), by Sir William Blake, captures the atmosphere at the Greek tragedy *Agamemnon* by Aeschylus c.450 BCE. This period is regarded as the Golden Age of drama in ancient Greece.

Athens’ weak position was due to democracy and led a counter-revolution to replace democratic rule with an extreme oligarchy. In both cases, democratic rule was restored within one year.

Democracy flourished for the next eight decades. However, after the Macedonian conquest of Athens under Philip II and his son Alexander (later Alexander the Great) in 322 BCE, Athenian democracy was abolished. It was intermittently restored in the Hellenistic age in the 1st and 2nd centuries BCE, but the Roman conquest of Greece in 146 BCE effectively killed it off.

Although democratic rule had been quashed, Athenian science and philosophy lived on. The renown and influence of Plato and Aristotle endured through the ages that followed, and much of their work continues to influence Western thought to this day. ■
There is nothing impossible to he who will try

The Conquests of Alexander the Great (4th Century BCE)

In one of the fastest and most daring military expansions in history, Alexander the Great, the young king of Macedon in the Balkans, blazed a trail of conquest across most of the known world of his day, and set in motion a process of Hellenization—the spread of Greek culture and its fusion with non-Greek, Eastern traditions—which endured for centuries.

Alexander’s father, Philip II, had transformed this peripheral state into a formidable military power, and had waged campaigns against his neighbors that culminated in Macedon’s domination over all of Greece. When he was assassinated in 336 BCE, Philip had been planning an expedition to West Asia, to free the former Greek city-states now ruled by the world’s superpower, the Persian Empire. After securing the Macedonian throne by destroying his rivals, Alexander set about pursuing his father’s quest, while satisfying his own thirst for glory.

In this late Roman mosaic, Darius III is shown fighting at Issus in 333 BCE. Alexander conquered the Persian king’s empire and destroyed its capital in Persepolis without suffering a defeat.

King of the world

After forcing the other Greek city-states to accept his authority, in 334 BCE Alexander marched into Asia Minor (modern-day Turkey) at the head of an army of 43,000 foot soldiers and 5,500 cavalry. At its heart lay the Macedonian phalanx, a well-drilled, tight-knit corps of 15,000 men armed with the sarissa, a pike that was up to 23ft (7m) long. When combined with the shocking cavalry charge provided by the king’s personal bodyguard, the Companions, the formation proved irresistible.

After an initial victory over the Persians at the River Granicus in the northwest, Alexander pressed on across Asia Minor. He stopped at Gordium in the central kingdom of Phrygia, where tradition held that he who could untie a complex

278 BCE Alexander’s generals establish three Hellenistic kingdoms in Greece, the Middle East, and Europe.

30 BCE Emperor Octavian annexes Egypt, the last Hellenistic kingdom, for Rome.
Alexander the Great

Throughout antiquity, Alexander was widely regarded as the most remarkable man who ever lived, and in terms of the breadth and duration of his renown, which saw him become a key figure in national literatures from Central Asia to Western Europe, he is one of the most famous men in history.

Born in 356 BCE, to parents who claimed descent from demigods and heroes, Alexander’s education under the philosopher Aristotle ensured he was steeped in Greek legend, and he came to believe he was invincible, even divine. As a general he was decisive, bold to the point of recklessness—with his own life and those of his men—and a brilliant tactician. He maintained the loyalty of his forces throughout the long and arduous campaign, but his quick and violent temper, fueled by his heavy drinking, occasionally spurred him to eliminate those closest to him, including his friends. Alexander died at age 32, at the height of his power. His funeral cortège was hijacked by Ptolemy, one of his generals, and diverted to Alexandria in Egypt, where his tomb was later visited by Julius Caesar, but is now lost.
IF THE QIN SHOULD EVER GET HIS WAY WITH THE WORLD, THEN THE WHOLE WORLD WILL END UP HIS PRISONER

THE FIRST EMPEROR UNIFIES CHINA (221 BCE)

China is probably the most enduring coherent state in world history, and to an extraordinary extent this is due to the will of one man: Qin Shi Huangdi, the self-styled First Emperor. Before he unified ancient China in 221 BCE, it was a region of diverse states, differing in culture, ethnicity, and language. During the era known to Chinese historians as the Spring and Autumn Period (771–476 BCE), the region was nominally under the control of Zhou dynasty kings, but in reality their feudal system of government meant that only a token authority rested with the royal throne, while feudal lords held genuine power over what

When [Qin Shi Huangdi] is in difficulty he readily humbles himself before others, but when he has got his way, then he thinks nothing of eating others alive.

Sima Qian
Han historian

Qin Shi Huangdi

As First Emperor of China, Ying Zheng (later known as Qin Shi Huangdi, 260–210 BCE) was a truly pivotal figure in Chinese history, uniting the country and ushering in a period of imperial rule that lasted nearly 2,000 years. He was a brutal despot but was also innovative, dynamic, and energetic—reports claim that he needed just one hour's sleep per night and he set himself a daily work quota, measured by the weight of papers that he needed to go through. He regularly walked the city streets in disguise to keep tabs on the populace, and he made five great tours of inspection of the empire. Highly paranoid and fearful of possible attempts on his life (he survived at least one assassination attempt), the emperor became obsessed with the quest for immortality, sponsoring expeditions to look for magic ingredients and mystics who could brew an elixir of life, to enable him to live forever. Ironically, his death at the age of 50 might well have been linked to his consumption of toxic mercury-based potions that he had taken to extend his life.

The rise of Qin

In 247 BCE, a 13-year-old prince named Ying Zheng succeeded to the throne of Qin. He inherited a militarized state, in which effective bureaucracy, powerful armies, and competent generals combined to produce a formidable and ruthless war machine. Zheng had rivals executed or exiled, appointed very effective generals and counselors, and conquered the six other states in the region, so that by 221 BCE all seven states were unified under his rule. Disdaining the old title of king (Wang), he styled himself as emperor (Huangdi). Since he was the first (Shi) emperor of the Qin dynasty, he was known as Qin Shi Huangdi.

The governing philosophy of the Qin state had been legalism: strict centralization of power and severity in enforcing adherence to the law. The emperor now set about applying this philosophy throughout the whole of China, ruthlessly imposing cultural, linguistic, economic, and technological unity. All scripts except Xiaozhuan (small seal script) were banned. In addition, according to legend, the emperor gave orders for 400 Confucian scholars to be buried alive and all existing books to be burned; his reign was to mark a new “Year One” in the history and culture of China. He also introduced a host of economic reforms—there was to be a single, unified system of weights and measures, a uniform coinage, and even the gauge of cart tracks was standardized so that axle-widths could be the same across the empire.

The new order

The new social and political order of the empire reflected changes that had been underway since the Spring and Autumn Period. The feudal system was abolished, so that the mass of peasantry now owed their allegiance to the state rather than feudal or clan lords. Over 100,000 noble families were
relocated to the emperor’s capital city Xianyang (near Xi’an, in the Shaanxi province), and their arms were confiscated, melted down, and then cast into giant statues. During the Warring States Period, the pressure of incessant military competition had generally favored the emergence of more meritocratic avenues for advancement, thereby facilitating social mobility while undermining the importance of noble lineage. In the Qin dynasty, aristocratic rule was replaced with a centralized bureaucratic administration and the country was divided into 36 commanderies, which were administrative divisions controlled by appointed (not hereditary) governors. Censors, or inspectors, traveled the country to enforce adherence to Qin law.

The Qin dynasty also saw the emergence of a new scheme of social stratification, with society divided into four classes: gentlemen (Shi), peasants (Nong), and two new classes that had emerged during the Zhou dynasty—artisans (Gong) and merchants (Shang). The educated gentry would replace the nobility as the main source of state officials. The merchant class was officially the lowest and most despised of the orders, and was subject to legal discrimination; however, wealthy merchants were able to use their financial muscle to become important political players.

Great works
Among Qin Shi Huangdi’s greatest achievements were his ambitious civil engineering projects, although there was a great human cost as many lost their lives in the process.

He is traditionally credited with building the first part of the Great Wall of China, to keep out nomadic tribes in the north, by connecting parts of old walls erected by the Warring States and then adding thousands of miles of new wall. Other projects included constructing the Lingqu canal, which linked the Xiang and Li rivers so military supplies could be transported from northern to southern China, and building military roads including “the Straight Road,” which was 497 miles (800 km) long and ran from Xianyang to the Great Wall.

Most famous of all the emperor’s ventures was the construction of his own elaborate mausoleum complex, which took 38 years and over 700,000 workers to construct. It consisted of a giant pyramid covered in earth to create an immense mound, 328 ft (100 m) high and 1,640 ft (500 m) across. Within the pyramid was a tomb in which his beloved empire was recreated in miniature, complete with liquid mercury rivers and seas. Buried around the tomb were large pits filled with thousands of life-sized terracotta warriors, bureaucrats, and entertainers, all intended to serve the emperor in the afterlife. Workers on the tomb were killed after completing their tasks so the secrets of the mausoleum’s location and contents died with them, and the tomb remained undiscovered for over 2,000 years.

Despite the megalomaniacal exertions of the First Emperor, the Qin dynasty was to prove short-lived. Peasant unrest caused

Guarding the tomb of Emperor Qin Shi Huangdi, these life-sized terracotta soldiers were discovered in 1974 by workers digging a well. The figures were originally brightly painted and each has a unique facial expression.
Confucius is generally considered to be the most influential philosopher in Chinese history. His teachings emphasized the importance of morality, integrity, humility, and self-discipline.

by deep-seated resentment over the brutal extortions of money and the many years of forced labor, plus bankruptcy as a result of over-ambitious civil works, combined to undermine the carefully ordered administration of the emperor and his leading counselors, chief among them the chancellor Li Si.

When the First Emperor died in 210 BCE his youngest son, Hu Hai, under the influence of advisor and former tutor Zhao Gao, seized the throne and exiled—and later executed—Li Si. Hu Hai was subsequently murdered after just three years of being in power and his successor, Zi Ying, found his authority so reduced that he adopted the title of king, rather than emperor.

The Han Dynasty
China collapsed into rebellion and civil unrest, and a few days after Zi Ying’s accession, the Han general Liu Bang marched into Xianyang. The following year, in 206 BCE, he declared himself emperor of the Han dynasty, which would go on to rule China for 400 years, shaping its subsequent history to such an extent that the main ethnic group in China is now known as the Han.

The Han expanded Chinese territory in all directions—west to Xinjiang and Central Asia, northeast to Manchuria and Korea, and south to Yunnan, Hainan, and Vietnam. Most importantly, they consumed the powerful Xiongnu Empire in the north. They also reintroduced Confucianism as the official state philosophy: Confucian education and ethics soon became the cornerstones of the scholar-bureaucracy, eventually forming the basis for the all-important civil service examination system, which would give a meritocratic basis to imperial institutions and combat the power of the aristocracy for millennia to come.

Han success in building and maintaining a unified, centralized China was based on the foundations that had been laid down by the First Emperor. The Han dynasty finally collapsed in 220 CE, amid a foment of civil unrest and natural disasters that convinced the Chinese that their dynasty had lost “the mandate of heaven,” giving way to the violent and chaotic era known as the Three Kingdoms and Six Dynasties Period. Despite the devastating cost of this breakdown, which saw the Chinese population plummet from 54 million in 156 CE to 16 million in 280 CE, the concept of a unified China survived 360 years of division, enabling the Sui dynasty to reunify China in 581.

The influence of the First Emperor is still felt in modern China, and Chairman Mao Zedong (1893–1976) explicitly drew on the emperor for inspiration. “You accuse us of acting like Qin Shi Huangdi,” Mao thundered in a 1958 tirade against intellectual critics. “You are wrong. We surpass him a hundred times. When you berate us for imitating his despotism, we are happy to agree! Your mistake was that you did not say so enough.”

Confucius is generally considered to be the most influential philosopher in Chinese history. His teachings emphasized the importance of morality, integrity, humility, and self-discipline.
THUS PERISH ALL TYRANTS

THE ASSASSINATION OF JULIUS CAESAR (44 BCE)
On March 15, 44 BCE, the life of Julius Caesar, dictator of Rome, came to a bloody end at the hands of a faction of aristocratic senators who were determined to rescue the Roman Republic from what they saw as Caesar’s tyranny. In reality, the dictator’s death did not save the republic: it merely unleashed the latest in a series of civil wars, which exhausted the Roman state. It was left powerless to resist the rise to absolute power of Caesar’s great-nephew Octavian. Taking the title Augustus, Octavian created a new political arrangement that enabled him to rule as emperor, bringing the 500-year-old Roman Republic to an end in all but name.

**Republican origins**

From its ancient beginnings as a cluster of small villages on seven hills by the River Tiber, Rome grew into a city-state that was just one of many on the Italian peninsula. According to legend, Rome was first ruled by kings, but in 509 BCE, the monarchy was overthrown and it became a republic. A new constitution allowed the election of two top officials, known as consuls, to run the state, but in order to prevent abuse of power, their term was limited to one year. The office of king was also prohibited, and special provision was made for the appointment of a dictator to replace the consuls in times of crisis—his term being limited to six months. The fledgling Roman Republic proved remarkably successful: between 500 and 300 BCE, it increased its extent and power...
through a combination of conquest and diplomacy until it incorporated the whole of Italy. Between 202 and 120 BCE, Rome came to dominate parts of North Africa, the Iberian Peninsula, Greece, and what is now southern France. Its conquered territories were organized into provinces, ruled by short-term governors who maintained order and oversaw the collection of taxes.

By the 1st century BCE, Rome was a Mediterranean superpower, yet its long tradition of collective government, in which no individual could gain too much control, was being challenged by the personal ambitions of a few immensely powerful military men. A series of bloody civil wars, internal political struggles, and civil unrest culminated with the dictatorship of Julius Caesar, a brilliant general and statesman, whose murder at the hands of his political enemies led to the demise of the republic and the birth of the Roman Empire.

**The republic crumbles**

In the period in which Julius Caesar came to prominence on the Roman political scene (around 70 BCE), Rome was in turmoil: beset with ever worsening social and economic problems and torn by political conflict. Early in Rome’s history, the non-slave population had been officially split into two classes: the patricians (members of the ancient hereditary nobility and wealthy landowners) and the plebeians, or plebs for short (the common people). On the formation of the republic, only patricians had been entitled to hold office in the Senate—Rome’s governing and advisory council—but in 368–367 BCE, a constitutional amendment allowed the election of wealthier plebs too, and the result was a power-sharing arrangement.

However, in reality, a small group of patrician families known as the Optimates (the “Best Men”) had long dominated the Senate and jealously guarded their privileges. In the late Roman Republic, those who championed the rights of the plebs—the Populares (the “People’s Men”)—sought popular support against the Optimates, either in the interests of the people themselves, or more often, in pursuit of their own careers. The self-interested Optimates resisted making the social and economic reforms that were urgently required to meet the changing needs of the Roman people. In Italy and the provinces an unequal system of taxation and corrupt governance were causing social unrest, while in the city of Rome itself, the infrastructure was barely able to cope with a growing population. The empire’s rapid expansion had brought a flood of...
slave labor from the provinces, driving many Roman farm workers and smallholders off the land and into the city in search of work.

The rise of Julius Caesar
Meanwhile, a handful of military leaders in Rome’s provinces had begun to use their armies to jockey for political prominence. Among them was Julius Caesar, a highly intelligent and ambitious general from a patrician family who had aligned himself with the Populares and risen swiftly through the political ranks. Caesar was intent on making the reforms necessary to meet the challenges of the republic, and so he maneuvered himself into a position that would allow him to achieve his goal.

In 60 BCE, Caesar became consul, and two years later he was appointed governor of the province of Gaul, a role which enabled him to remain abreast of developments in the Senate while also offering a springboard to military glory. In a series of masterful campaigns over the next eight years, he conquered Gaul, bringing the whole of what is now France, along with parts of Germany and Belgium, under his rule. He also led two expeditions to Britain, in 55 and 54 BCE. Caesar’s heroic military exploits left him immensely rich and increased his personal prestige; he enjoyed the loyalty of his armies and the love of the Roman mob, upon whom he could now afford to lavish feasts, games, and money.

Buoyed by his achievements, Caesar attempted to dictate the terms on which he would return to Roman politics, demanding to be allowed to stand for a second consulship while remaining in command at Gaul. This put him on a collision course with the Optimates in the Senate, since Roman law required military leaders to relinquish control of their armies before entering Rome, a prerequisite for running for office. Caesar knew that if he agreed to enter the city as a private citizen, without his armies, his political opponents would most likely attempt to try him for abuse of power during his first consulship.

Back in Rome, the Optimates, alarmed by the implications of Caesar’s meteoric rise, allied themselves to one of his main political rivals, the renowned general Pompey. The Senate passed laws intending to strip Caesar of his command when he returned from Gaul, and in 49 BCE they declared him hostis, or public enemy. In response to this direct threat, Caesar did the unthinkable: he marched his army on Rome. En route, he paused at the border between the Gallic provinces and Italy proper: a small river called the Rubicon. Caesar was acutely aware that crossing the river would constitute a declaration of war against the Senate but, quoting the

“Even yet we may draw back, but once across that little bridge, and the whole issue is with the sword.”
Julius Caesar
Speaking to his army before crossing the Rubicon

Gaius Julius Caesar was born in Rome in 100 BCE, to a patrician family of distinguished ancestry. From an early age, he grasped that money was the key to power in a political system that had become hopelessly corrupt. He also quickly learned that forging a network of alliance and patronage would be crucial to his success.

After serving in the war to crush the slave revolt led by Spartacus in 72 BCE, Caesar was briefly taken hostage by pirates. Once he returned to Rome in 60 BCE, Caesar spent vast sums on buying influence and positions, eventually teaming up with the two other leading men in Rome, Crassus and Pompey, to form the so-called First Triumvirate. Between 58 and 50 BCE, he formed a provincial power base in Gaul where, without the sanction of the Senate, he launched a series of campaigns that made him master of Western Europe, with fabulous wealth and powerful armies. However, these campaigns also earned him many opponents among the governing classes, who would eventually cut short both his career and his life.
Athenian poet Menander, he announced *alea iacta est* ("let the dice roll") and led his men onward.

**Caesar's new order**

In the ensuing civil war, Caesar finally triumphed over Pompey's forces at the Battle of Pharsalus in northern Greece in 48 BCE. The defeated Pompey fled to Egypt for sanctuary, where he was later assassinated. After crushing the remaining pockets of resistance, Caesar finally returned to Rome in 45 BCE, to consolidate his political position. In 46 BCE he accepted the dictatorship for 10 years; two years later, he was granted the office for life. Now in a position to begin the monumental task of reconstructing the Roman state and restoring stability to the empire, Caesar initiated far-reaching social and political reforms. He extended Roman citizenship; he enlarged the Senate, bringing in allies from among the provincial aristocracy; he established colonies outside Italy, to help spread Roman culture and knit the empire together; he spent lavishly on grandiose public works and buildings; he cut taxes; and he even reformed the Roman calendar, introducing the system of leap years that is still in use today.

**A murder plot**

Caesar's pragmatic solutions for re-establishing unity in the empire after years of chaos found favor with many parts of society, yet at the same time, his increasingly autocratic attitude to power was alienating fellow members of the ruling class. They felt that Caesar was trying to destroy the cherished traditions of the Roman state, and to undermine the prestige of the nobility, and spread the rumor that he was planning to make himself king. Unfortunately, Caesar failed to quell the suspicions. He accepted unprecedented honors, such as assuming the title "Imperator" ("Victorious General") as a family name; he also allowed temples and statues to be erected in his honor, and had coins minted bearing his image. And when he adopted his grand-nephew, Octavian, there were fears that he was trying to establish a dynastic succession. Some members of the Senate concluded that the only solution to the problem was to assassinate Caesar, and so they hatched a conspiracy to carry it out.

Representing those opposed to the dictator’s reforms—and the leading agent in the plot to murder him—Gaius Cassius Longinus was a general who had risen to political prominence during a largely disastrous campaign in Persia. Ancient Roman historians argued that Cassius’s involvement was prompted by a combination of jealousy and greed. He is also said to have recruited the most important conspirator, Marcus Junius Brutus, a trusted colleague and confidante of Caesar, opposed to the dictator’s presumed monarchical ambitions. »

**Ancient Roman historians argued that Cassius’s involvement was prompted by a combination of jealousy and greed. He is also said to have recruited the most important conspirator, Marcus Junius Brutus, a trusted colleague and confidante of Caesar, opposed to the dictator’s presumed monarchical ambitions. »**
Death of a dictator
The assassination plot grew rapidly, eventually including 60 senators, among them many of Caesar's close colleagues. The plotters decided to strike at a meeting of the Senate that had been called for March 15, (the Ides of March). On the day, they gathered at Cassius's home, each senator concealing a dagger beneath his robes, before moving on to Pompey's Theatre—part of a great civic complex that Caesar's old rival had constructed—where the Senate was meeting. A group of gladiators had been stationed in the theatre itself, to help control any crowd problems. However, many of the conspirators were nervous and ready to flee, convinced that the plot had been uncovered.

Caesar had indeed been warned: a list of the plotters had been thrust into his hands, but he ignored it. His wife pleaded with him not to attend the Senate meeting, but one of the conspirators, stationed at Caesar's house, helped calm her fears. When Caesar arrived at the meeting, a conspirator distracted his deputy, Mark Anthony, delaying him outside the theatre. As Caesar took his seat, the conspirators drew their daggers and struck, stabbing him 23 times. In an ironic twist, Caesar breathed his last slumped against the base of a statue of his old rival Pompey.

The Second Triumvirate
Seized with manic fervor, the conspirators dipped their hands in Caesar’s blood and rushed out into the Forum to proclaim their tyrannicide. In the power vacuum that followed, Mark Anthony, and Caesar’s heir, Octavian, promptly assumed control of the state, forming in 43 BCE a triumvirate (a group of three men holding power) with Lepidus, one of Caesar’s former allies.

Needing to gather enough funds to stabilize their authority, and to remove political opposition, the triumvirate drew up a list of those who had supported Caesar’s murderers, and declared them outlaws. Around 200 senators and more than 2,000 equites (“knights” or minor nobility) were either killed or had their estates confiscated. The treasury’s coffers now filled, the triumvirate hunted down and destroyed Brutus and Cassius. In 40 BCE, the triumvirs met again, this time to carve up the Roman world. Africa was given to Lepidus, the East to Mark Anthony, and the West to Octavian. However, it was not long before Octavian went to war against Anthony in north Africa, and, after defeating his forces at Actium in western Greece in 31 BCE, Octavian became the master of the Roman world.

Rome’s first emperor
Octavian returned to Rome in 28 BCE and, instead of following Caesar’s example, he renounced the dictatorial powers granted to him in order to wage his war against Antony. In 27 BCE, in gratitude for his service to Rome, the Senate bestowed on him the name Augustus (“revered personage”) and granted him wide-ranging legal powers. Eventually, through political sleight of hand, he became Rome’s sole ruler, controlling all aspects of the Roman state and command of the army.

An emperor in all but name (he was careful to spurn such titles, styling himself instead as princeps, or “first citizen”), over the next four decades, Augustus set about transforming the ruins of the republican system into an imperial autocracy, all the while maintaining the illusion that his authority was dependent on the will of the people. He loosely established the boundaries of the empire, pushed through reforms to clean up both private and public life, and crushed dissent. After the long periods of exhausting civil war, many in the empire were grateful for peace.

The Pax Romana
Indeed the might of the Roman military and the consequent improvements in security and stability across a vast stretch of territory, in what became known as the Pax Romana (“Roman Peace”), led to a growth in trade, economic activity, population, and general prosperity. The arts and culture
flourished, public and private building works proliferated, and the provinces outside Italy underwent a process of Romanization, in which the Roman language, culture, laws, and institutions were embedded into diverse societies and across ethnic boundaries. Provincials were even granted full Roman citizenship after a period of military service.

However, for the regions beyond the bounds of empire, Augustus’s Pax Romana often meant just the opposite. Even after reducing the army from 80 legions to a permanent force of just 28, Augustus had to find employment for 150,000 soldiers. He launched a series of campaigns to extend borders, suppress and harry rebels and “barbarians,” and seize slaves from conquered areas.

**The Ara Pacis Augustae** altar in Rome is dedicated to Pax, the Roman goddess of peace. The processional frieze shows members of the Roman Senate with a priest.

**An imperial legacy**
By the end of his life in 14 CE, Augustus had established a new imperial system that would endure for centuries. For some years before his death, Augustus had prepared the way for an heir to succeed him, and retain control of the state. His step-son Tiberius was gradually granted powers until he could effectively be considered to be a co-emperor. This smoothed the transition of authority on Augustus’ death, preventing a vacuum of power and ensuring continuity.

Augustus thus established the principle of direct succession and ensured the survival of the office of emperor. The system continued through multiple dynasties, with the empire reaching its height under the Nerva-Antonine dynasty when the emperor Hadrian ordered the building of a wall in northern Britain to mark the empire’s outer limit.

The transition from republic to monarchy, while drastic, gave Rome a new stability. Masquerading as a democrat, Augustus created a new autocratic system of government, which, despite restricting political participation, was much better able to resist the compulsive upheavals that had plagued the Roman Republic a generation before.

Bear with me the hope that when I die, that the foundations which have laid for [Rome’s] future government, will stand firm and stable.

**Augustus**
In October 312 CE, Emperor Constantine I was stationed at the Milvian Bridge near Rome, waiting to join battle with Maxentius, his rival for control of the Western Roman Empire (in 285, the empire had been split into two halves, eastern and western, each ruled by an emperor and a deputy). Tradition says that in the days before the encounter, Constantine had a vision of a flaming cross in the heavens bearing the inscription *in hoc signo vinces* ("by this sign conquer"). This convinced him that he had the support of the god of the Christians, and this belief was upheld when his army went on to defeat Maxentius’s men. In fact, the Christian god was not the first deity Constantine had auditioned; an earlier version of his vision involved the Greek and Roman god Apollo. He appears to have been looking for theological “back-up” to legitimize his ambition to become sole emperor, and a monotheistic supreme being may have seemed to him a good fit: a heavenly mirror image of his own position on Earth.

Constantine I’s adoption of Christianity after his victory at the Milvian Bridge gave the faith a huge boost: it rapidly gained more followers and began edging out the pagan cults.
Despite the legend of his divine vision, Constantine’s conversion to Christianity seems to have been gradual rather than immediate—he was not baptized until many years later, on his deathbed. However, soon after his victory at the Milvian Bridge, he began the process of rehabilitating, and then exalting, Christianity; in 331 CE, he issued the Edict of Milan, a proclamation that established religious toleration for Christianity within the empire.

**A multi-faith empire**

For almost 300 years after the life of Jesus Christ, the religion based on his teachings remained a minor sect within the Roman Empire, practiced alongside many other faiths, both mono- and polytheistic. Some aspects of Christianity, such as its egalitarian nature, made it suspicious to the imperial authorities however, and Christians were periodically persecuted.

All across the ancient world at this time, changing social, political, and economic conditions were reflected in cultural and religious changes; Christianity was just one of a number of monotheisms gaining popularity in the Roman Empire, including the Persian cult of Mithraism, with which it had much in common.

**The rise of Christianity**

In 324, after disposing of the emperor in the East, Constantine became sole ruler of the Roman Empire, and then sought to use Christianity as a unifying force across his diverse and fractious realm. To make the increasingly dominant eastern half easier to govern, he founded a new city called Constantinople (now Istanbul), consecrating it with both Christian and pagan rites, but allowing only Christian churches to be built. Although it would take time for all Roman citizens to convert to Christianity, in Constantine’s reign, the higher ranks of society, seeking political advancement and personal favor with the emperor, flocked to the Church, and the emperor built basilicas across the empire.

Christianity, however, was not a single, uniform religion at this time, and splits, or schisms, formed. In 325, Constantine convened the Council of Nicaea—the first universal council of the Christian Church—mainly to settle the Arian schism, a theological dispute over whether Jesus was of the same substance as God.

**Rome is Christianized**

In the mid-300s, Emperor Julian, an adherent of the old religion, tried to revive paganism, but it was too late: Christians had become a majority, at least in the East. The faith was increasingly bound up with empire, as the Roman state adopted and molded the Church into an instrument of social and political control, unity, and stability.

Under Emperor Theodosius I (reigned 379–395), pagan temples and cults were suppressed, heresy was outlawed, and Christianity became the official religion of the Roman Empire. Eventually, it also became the faith of the barbarian successor states in the Roman Western Empire, as well as of the Byzantine Empire in the East. Over the course of many centuries, the western (Catholic) and eastern (Orthodox) churches grew apart in doctrine and organization, but Christianity endured.
**THE CITY WHICH HAD TAKEN THE WHOLE WORLD WAS ITSELF TAKEN**

**THE SACK OF ROME (410 CE)**

**IN CONTEXT**

**FOCUS**

**Nomad invasion**

**BEFORE**

9 CE Germanic tribes secure their independence with victory at Teutoburg Forest.

285 The Roman Empire is divided into East and West.

372 The Huns defeat the Ostrogoths in Eastern Europe.

378 Visigoths destroy a Roman army and kill the emperor at the Battle of Adrianople.

402 The Western Roman capital moves to Ravenna.

**AFTER**

451 A Roman–German coalition defeats the Huns at the Battle of Chalons.

455 Vandal pirates loot Rome.

476 The last Western Roman emperor is deposed.

489 Theodoric of the Ostrogoths conquers Italy, with Byzantine consent.

---

"In 410 CE, Rome fell to an army of nomadic Germanic peoples—Visigoths—who pillaged the city over the course of three days. Although Rome had already ceased to be the capital of the Western Roman Empire and the destruction was relatively restrained, the sack sent shock waves across the world. Changes known as the Migration Period, or the Barbarian Invasions, were then taking place, with great movements of peoples across all of Eurasia, from China to Britain. Barbarian peoples began to invade settled empires such as those of Rome and China from around 300 to 650. They carved out new..."
In Destruction (c.1935) by Thomas Cole, invaders overrun a once-great city often likened to Rome. Citizens’ bodies litter monuments that were built to celebrate the now fallen civilization.

**The barbarian “other”**

Barbarian was a Greek word signifying the unintelligible babble of those who did not speak Greek, and therefore could not be considered civilized. Romans adopted this “them-and-us” construction. However, by the 4th century, the boundaries between Rome and its barbarian neighbors were blurred, both culturally and geopolitically: the barbarians had become more like the Romans, and vice versa. The Roman army comprised mostly barbarians—either Germanic auxiliaries and mercenaries, or Roman citizens who were actually Gauls, Britons, or one of the hundreds of other groups and ethnicities. Nevertheless, much Roman culture survived the invasions. For instance, although much of Italy, Gaul, and Spain fell under the sway of the “Germanic” Goths, Suevi, and Vandals, their languages resisted Germanic influence and remain Romance languages—that is, languages that have evolved from the Latin spoken by Romans in Rome.

The Western Empire had however been in decline since at least the 3rd century. Its population and economy had diminished, making it increasingly financially dependent on the Eastern Empire; weakening central authority had given more autonomy to the provinces. The military, obliged to recruit from barbarian tribes, was losing its core strength. In reality, the Barbarian Invasions were probably part of a process: a transition, rather than a fall. Roman customs, culture, language, and particularly its religion in the form of Christianity, endured across the provinces, and many of the new ruling elite saw themselves as continuing in the tradition of Rome. The city itself survived sack by Alaric and his Visigoths, and by the Vandals in 455, and flourished under Theodoric the Ostrogoth (489–526).

In their turn, the successor states formed by Germanic tribes over the following centuries eventually found themselves under attack by further waves of invaders such as the Magyars and Vikings.

Barbarians at the gates

In Europe, the arrival of the Huns in the lands east of the Rhine and north of the Danube displaced Germanic tribes who had long lived in delicate balance with the Roman Empire. The Visigoths moved into Roman lands, eventually storming Rome in 410, while other tribes including the Vandals, Suevi, Alans, Franks, Burgundians, and Alemanni invaded and settled territory from Gaul to Spain to North Africa. In the 440s the Huns, under Attila, ravaged Eastern Europe before being defeated by a coalition of Romans and Germans. The Western Roman Empire shrank to encompass little more than Italy itself, its puppet emperors controlled by barbarian generals. In 476, the last nominal emperor was deposed by one such general, Odoacer, marking the end of the Roman Empire in the west.

Kingdoms, which in many cases gave rise to the nations of the modern era. Climatic changes in Central Asia drove the nomadic horse tribes of the steppes to seek better pastures, which in turn forced neighboring nomads to invade the so-called civilized empires. China was ravaged by the Xiongnu, Persia by the Hepthalites, and India by the White Huns.

In *Destruction* (c.1935) by Thomas Cole, invaders overrun a once-great city often likened to Rome. Citizens’ bodies litter monuments that were built to celebrate the now fallen civilization.
THE INDUS VALLEY CIVILIZATION COLLAPSES
(c.1900–1700 BCE)

The Indus Valley Civilization (c.3300–c.1700 BCE) was based around large cities with planned streets and impressive drainage and water-supply systems in what are now Pakistan and northwestern India. By 1900 BCE, this civilization was in decline and no longer producing the elaborate jewelry and fine seals for which it was famous. By c.1700 BCE, the great Indus cities of Harappa and Mohenjo-Daro were virtually empty. The reason is unclear, but the most likely explanation is a combination of crop failure and a decline in trade with Egypt and Mesopotamia. There is also some evidence of flooding due to a change in the course of the Indus River.

THE PELOPONNESIAN WARS
(431–404 BCE)

The Peloponnesian Wars were fought between Athens (initially the most powerful Greek city-state and the center of classical civilization) and the more militaristic Sparta. Sparta first launched land-based attacks on Athens, while Athens used its superior sea power to suppress revolts along the coast. In 413 BCE, an attack on Syracuse, Sicily, went wrong, leaving most of the Athenian force destroyed. Then the Spartans, allied with Persia, supported rebellions in a number of Athenian subject states and finally wiped out the Athenian fleet at Aegospotam (405 BCE). The war deeply damaged Athens, ending the golden age of Greek culture and leaving Sparta dominant.

EMPEROR WU CLAIMS THE MANDATE OF HEAVEN
(1046 BCE)

The idea that the emperor of China rules with the approval of heaven dates to the Zhou dynasty, which was founded when Wu and his ally Jiang Ziya defeated the long-ruling Shang at the Battle of Muye in 1046 BCE. The Shang had presided over a long period of peace and prosperity but by the 1040s had become corrupt. The Zhou concept of the Mandate of Heaven aimed to prevent this from happening, placing good government above noble birth, and sanctioning others to overthrow the ruler if he did not display these qualities. It influenced the way the Chinese regarded their rulers for thousands of years.

JUDAH DEFIES THE ASSYRIANS
(c.700 BCE)

In the 9th century BCE, the Hebrew state of Judah (west of the Dead Sea) was part of the large Assyrian empire. In the 8th century, the Judaean ruler Hezekiah refused to pay tribute to the Assyrians. The Assyrian king, Sennacherib, laid siege to Jerusalem (an event described in the Bible), but the Judeans resisted their mighty enemies, who failed to take the city. Although this was a relatively small setback for Assyria, it was a triumph for the Judeans, who attributed their victory to Yahweh. This was a major factor in the Hebrew peoples’ adoption of monotheistic religion soon after.

HANNIBAL INVADES ITALY
(218 BCE)

By the 3rd century BCE, Carthage, in Tunisia, had established itself as a major regional power, extending along the coast of North Africa before invading Spain in
the 230s BCE. In 218 BCE, Hannibal, Carthage’s commander in Spain, took his army across the Alps to attack Italy. Despite a series of victories in what became known as the Second Punic War, Hannibal could not take Rome itself and in 202 BCE, he returned to Africa. The Romans had proved their strength, put an end to the idea that Carthage was invincible in the Mediterranean, and paved the way for their own rise to power.

**VERCINGETORIX IS DEFEATED AT ALESIA**

(52 BCE)

In 52 BCE, the Gaulish chieftain Vercingetorix led a revolt of local tribes against the Roman conquest of Gaul (modern France). At the Battle of Alesia, in Burgundy (eastern France), Roman forces under Julius Caesar built an ingenious donut-shaped fortification around the town, blocking Vercingetorix inside while also creating a stronghold against Gaulish reinforcements. The chieftain was forced to surrender, and after five years in captivity he was strangled on Caesar’s orders. The battle resulted in an all-embracing Roman Empire stretching right across Europe.

**ROMANS OCCUPY BRITAIN**

(43 CE)

In 43 CE, on the command of the emperor Claudius, a Roman invasion force landed in Britain. In spite of opposition from local chieftains such as Caratacus, and a later revolt by the Iceni tribe under their leader Boudica, Roman rule eventually extended across England to the Scottish border and into Wales. The Romans governed Britain until c.410, founding towns, developing a system of roads, and introducing such innovations as underfloor heating and the use of concrete for building. Many Britons benefited from Roman rule and from strong trading links with the empire in products such as metals and grain.

**CHINA IS Divided INTO THREE Kingdoms**

(220 CE)

The last years of the Han dynasty in China were marked by bitter divisions and fighting that led in 220 CE to the country being divided between three rival emperors, all claiming to be the rightful successors of the Han. These Three Kingdoms—the Wei in the north, the Wu in the south, and the Shu in the west—reached a fairly stable agreement over territory until fighting broke out from 263, when the rival Jin dynasty challenged and then conquered them. The wars had a devastating impact on the population.

**THE MAYA Classical Period Begins**

(250 CE)

The Maya civilization reached its Classic phase in the 3rd century CE, with a large number of cities across Mexico and Guatemala that featured distinctive temples shaped as stepped pyramids, carved monuments inscribed with dates from the complex Maya calendar, and a large and extensive trade network. The largest city was Teotihuacan in central Mexico, although lowland cities such as Tikal were also powerful. Maya civilization left a lasting mark in North and Central America, its culture influencing later peoples, such as the Aztecs.

**OBELISKS ARE ERECTED IN THE Kingdom Of AXUM**

(4th century CE)

In the 4th century CE, the people of the Ethiopian city of Axum erected tall stone obelisks that would be a feature of their civilization. Axum dominated the maritime trade routes around the Horn of Arabia and into the Indian Ocean, offering traders a vital link between Asia and the Mediterranean making the kingdom an impressive income. The obelisks are up to 108 ft (33 m) tall and are thought to be memorials to prominent people. They testify to the power of this early African kingdom and its development of a distinctive civilization. The obelisks have become symbols of enduring African culture.

**CLOVIS UNITES GAUL**

(late 5th century CE)

The end of Roman rule in Gaul (modern France) came about when Clovis, leader of the Salian Franks, defeated the Roman leader Syagrius in 486 CE. This victory, which added to those of Clovis’ father Childeric, brought virtually all of France north of the Loire under the rule of his dynasty, called the Merovingians, after his grandfather Merovech. The Merovingians ruled France for some 300 years, making real the idea of a united France independent of outside rulers.
THE MEDI WORLD
500–1492
Historians call the period from 500 to 1500 “the Middle Ages,” seeing it as a separate era sandwiched between the ancient world and modern times. In reality, there was never a clear break with the ancient world. In the eastern Mediterranean, the Roman Empire continued for almost 1,000 years after the fall of Rome, although it was rebranded by historians as the Byzantine Empire. The ancient tradition of a united China ruled by an emperor was revived in the 6th century and continued to the Ming dynasty, albeit with interruptions. Even in Western Europe, where the breakdown after the Roman Empire’s collapse was most evident, Christian religion survived in Rome as the key marker for the distinction between what were considered “civilized” and “barbarian” societies.

The rise of Islam
The dominance of two mutually hostile monotheistic religions—Christianity and Islam—was the most distinctive characteristic of this period across much of Eurasia. The founding of Islam in the 7th century was a transformative event, and Arab armies inspired by the faith altered the political landscape: Muslim rule spread from Spain in the west to central Asia in the east. Although a united Islamic caliphate could not be sustained, the religion ensured a continuity of civilization even when power shifted from the Arabs to other peoples such as the Turks. The great cities of the Muslim world surpassed any in Christendom in size and sophistication, and Muslim scholars preserved the science of the ancient Greeks and built upon it. Islamic civilization remained dynamic and expansive throughout the entire medieval period.

Western European fortunes
In Western Europe, civilization fell drastically from the level achieved under the Roman Empire. Warrior kings ruled over a thinly spread population sustained by subsistence agriculture, and the area remained prey to non-Christian raiders and invaders, such as the Vikings and the Magyars, into the 10th century. A nostalgia for ancient Rome led to King Charlemagne being crowned emperor in 800, but the Holy Roman Empire, based on the tradition Charlemagne founded, failed to unify Western Europe politically. In the absence of strong centralized state systems, feudal relationships held societies together.

The army of the Eastern Roman Empire, led by Belisarius, retakes Rome, driving out the Ostrogoths.

The Abassid caliph al-Mansur’s founding of Baghdad marks the start of the Islamic golden age. The city is a center of Muslim scholarship.

Frankish king Charlemagne is crowned emperor in Rome. As secular leader of Christendom, he unites much of Western Europe.

In Cambodia, work begins on the vast Hindu temple Angkor Wat, which becomes the world’s largest religious structure.

Muhammad announces that he has received a divine revelation and founds Islam. Within 20 years, the religion will come to dominate the Arabian peninsula.

Viking warriors mount a brutal raid on a monastery on the holy island of Lindisfarne, northern England—the first of many Viking raids.

Christian knights seize Jerusalem from the Muslims, and go on to found crusader states in Palestine and Syria.

Minamoto Yoritomo becomes shogun, establishing a line of military rulers who would govern Japan for 650 years.

74 INTRODUCTION
From the 11th century, a revival of Western European culture, trade, and urban life gathered pace. The “Medieval Warm Period” (950–1250), when Europe experienced above-average temperatures, improved yields from agriculture; it was also a time when great cathedrals and castles were constructed. But even when the Christian crusaders fought their way to Jerusalem at the heart of the Muslim world, the flow of civilization was the other way, with Islamic scholars far advanced in medicine, philosophy, astronomy, and geography.

**Expansion and contraction**

By the 13th century, the world’s population is believed to have risen to around 400 million—double its total at the high point of the ancient empires. A wide-ranging network linked Europe to China and the thriving trading kingdoms of Asia, by land along the Silk Road and by sea across the Indian Ocean. Cairo and Venice both became wealthy cities as focal points at the western end of this trade.

However, civilized life remained precarious. The Mongols—nomadic warriors from the Asian steppes—seized major cities from the Middle East to southern China, carrying out large-scale massacres. Lethal diseases were also highly prevalent. Carried along the trade routes in the mid-14th century, the Black Death epidemic may have killed a quarter of the world’s population.

**Inventions and progress**

Technological progress was slow but cumulatively substantial. As the world’s most advanced country, China was the ultimate source of most inventions, from paper and printing to the magnetic compass and gunpowder. Even relatively backward Europe benefited from improvements in shipbuilding and metalworking, and the invention and spread of the plow and the windmill transformed agriculture.

By the end of the Middle Ages, Western European kingdoms had developed from “feudal” states, based on oaths of loyalty, to more stable and centralized states, able to channel their key resources into the large projects of colonization and exploration. In the Americas, meanwhile, civilizations such as the Aztecs and Incas continued to evolve independently, untouched by developments in Eurasia and Africa, until the Spanish conquistadors arrived in the 16th century.

BELISARIUS RETAKES ROME (536 CE)

IN CONTEXT
FOCUS
The Byzantine Empire

BEFORE
476 CE Barbarian general Odoacer deposes the last emperor of the Western Roman Empire and rules as independent king in Italy.

493 CE Ostrogothic ruler Theoderic overthrows Odoacer and becomes king, notionally subject to Byzantine rule.

534 CE Byzantines end Vandal rule in North Africa.

AFTER
549 CE Byzantines recapture Rome from the Goths for the third and final time.

568 CE Lombards (a barbarian tribe) invade Italy and seize land that Justinian had recaptured for the Byzantines.

751 CE Lombards capture Ravenna—the last remaining major Byzantine holding in northern Italy.

On December 9, 536 CE, the army of the Eastern Roman (or Byzantine) Empire, led by general Belisarius, entered the city of Rome through the ancient Porta Asinaria gate. The Byzantine’s arrival forced the rapid departure of the city’s current defenders, the barbarian Ostrogoths, who were fleeing northward through the Porta Flaminia. Almost precisely 60 years after Italy had fallen out of imperial hands, it appeared that the empire’s ancient birthplace might be restored to Roman rule.

The survival of Byzantium
While the Western Roman Empire finally fell in 476 after a century of barbarian invasions, the eastern portion—the Byzantine Empire, with its capital at Constantinople (modern Istanbul)—weathered the storm, its retention of rich provinces, such as Egypt, enabling it to mount a successful defense of its territory. However, the loss of the empire’s birthplace was a blow to the prestige of the Byzantine emperors, who refused to accept it. In 488, the Emperor Zeno despatched one tribe of Germanic barbarian mercenaries, the Ostrogoths, to remove another, led by Odoacer, who had been responsible for deposing the last Western Roman emperor. In return the Ostrogoths would be allowed to rule Italy as subjects of the Byzantine Emperor. Furthermore, the Goths had been encroaching on imperial lands, and so Zeno hoped their removal to Italy would neutralize both problems.

The Gothic War
For the following 40 years, the Goths’ rule of Italy was relatively untroubled. However, the accession of Justinian (c.482–565) as Byzantine emperor in 527 changed things.

“To find money in Italy for the war is impossible, since the country has been largely reconquered by the enemy.”

Belisarius, 545
and forth between the two sides as the war in Italy dragged on for almost 20 years.

Twice the Goths retook Rome but, lacking the resources to hold it, lost it again both times to the Romans. Finally, the last major Gothic army was defeated in 552.

**The impact of the war**

Although the Byzantines had won the war, the victory was hollow. Italy was devastated—the cities had lost much of their population and the rural economy was in tatters. The traditional Latin-speaking ruling classes found that Greek-speakers from Constantinople were given all the key positions. Rome was treated as a provincial outpost of the Byzantine Empire, and hopes that the city might be restored as the center of imperial power were dashed.

The effects of the war, together with a plague that killed one-third of the empire’s inhabitants in 542, made it hard to find troops that could garrison Italy. The new province provided little tax revenue and it became a major financial drain.

The optimism that greeted the capture of Rome was replaced by a profound gloom—a mood confirmed when in 568 the Lombards, another barbarian group, invaded Italy and took most of the Byzantine land in north and central Italy.

Although the Byzantine Empire survived a further nine centuries, it was never again able to make another serious attempt to restore the Roman Empire in the west. Instead, it focused on defending its Greek-speaking core in the east, leaving the Germanic kingdoms in Italy, France, and Spain free to develop unhindered.
Around 610 CE, in a cave in the hills above the town of Mecca, central Arabia, Muhammad—a 40-year-old man from a merchant family—declared that he had received a divine message from the angel Gabriel. This was followed by similar revelations over the coming months and years and led to the founding of a new monotheistic religion: Islam. Within 20 years, this creed had come to dominate the Arabian peninsula, and a century later its followers had shattered the ancient Byzantine and Persian Empires, creating a state that stretched from Spain in the far west to Central Asia in the east.
Arabia before Islam

From the first millennium BCE, there were sophisticated kingdoms in southern Arabia, which derived their wealth from the spice trade. In the early days, the trade routes ran along the northwest coast, but by the 7th century these had diminished as merchants increasingly used a maritime route up the Red Sea, leaving many places that had been relatively prosperous in decline. There were a few scattered towns, such as Medina, which were dependent on more local trade in wool and leather, along with a few key imports such as grain and olive oil. The central desert regions of the Arabian peninsula were very poor: Bedouin tribes followed a nomadic lifestyle, and competition for scarce resources shaped a society in which primary loyalty was to a kinship group, or tribe.

At the time of Muhammad, Arabia was in a state of religious and political ferment. Strong Jewish communities had become established in Yemen in the south and in northwestern oasis towns, such as Medina, while Christianity had gained footholds in Yemen and eastern Arabia. Although monotheistic faiths were making inroads against the traditional polytheistic paganism of the Bedouin Arabs, paganism still remained strong. Conflict between tribes was also common, and in Mecca, in the sacred enclosure known as the haram, a truce was enforced so men of different tribes could trade freely without violence.

Muhammad in Mecca

The Meccan haram was controlled by the powerful Quraysh clan, of which Muhammad was a member. Muhammad’s rejection of paganism, and his bold proclamation that there was but a single God, and that believers needed to follow a prescribed set of religious observances—including praying five times a day and fasting during Ramadan—set his followers apart. His preaching of a single religious community that cut across social boundaries was perceived as threatening by the traditional leaders, who felt it undermined the source of their authority.

The flight to Medina

By 622, the atmosphere in Mecca had become so tense that Muhammad and his handful of followers fled north to Medina—an event called the hijra (meaning emigration), which marked the real foundation of the Islamic community. The Medinans, who resented the power of the Mecca-based Qurayshi, were sympathetic to Muhammad’s cause and allowed him to preach freely, giving him the opportunity to attract further converts.

The Qurayshi were not content to see Muhammad’s powerbase grow in Mecca and within two years when he began to preach against pagan polytheism and practices such as female infanticide. Muhammad’s flight to Medina in 622 marked a key moment in the spread of Islam, as its acceptance outside Mecca showed that its appeal might transcend traditional kinship structures. Muhammad proved an inspirational leader, and his adept handling of the challenges facing the new religion meant that by the time of his death in 632, two years after his return to Mecca, its adherents had spread throughout Arabia.
years violence had broken out between the established powers there and Muhammad’s supporters. Muhammad outmaneuvered the Qurayshi, first by raiding their caravans, then defeating them in a pitched battle in 627, and finally negotiating the right to return to Mecca on a pilgrimage in 629. By the time he died in 632, Muhammad was re-established in Mecca, and his diplomatic and military successes in attracting other tribes to his cause had made his position unassailable. As his authority spread, so too did the reach of his religious message and the numbers of new Muslim converts.

After Muhammad’s death, Islam entered a crisis and the fledgling religion might easily have been crushed. Tribes in the east broke away from the Muslim religious community (the umma) and declared allegiance to their own prophet, while the Medinans were unhappy about the dominance of Meccans in the movement. The choice of Abu Bakr, Muhammad’s father-in-law, as caliph (successor) signaled that the leadership would remain in the Prophet’s family and this, together with a series of successful military campaigns against the malcontents, enabled the umma to survive.
Islamic society
The newly conquered lands became part of an Islamic caliphate. Many of its inhabitants converted, while those who did not were tolerated if they were Christians, Jews, or Zoroastrians, provided they paid a special tax. Islam transformed the lands it absorbed in many ways. As well as sweeping away the old imperial structures, it imparted a new sense of religious community, often uniting the conquerors and the conquered. Islamic scholars resurrected the works of Greek philosophers and scientists that had languished forgotten for centuries, translating them into Arabic, and beautiful mosques began to adorn the towns. Areas that had been marginalized under the Byzantine or Sassanid Empires now found themselves at the heart of a new, vibrant civilization.

Success, however, brought its own problems for Islam. Acquiring lands far more urbanized than Arabia meant that the caliphs had to adapt from being warrior chiefs commanding a tight-knit group of followers, to monarchs ruling over a huge area with complex economies and societies. In addition to this, Muslims were initially in the minority, and not wholly united.

Growing divisions
Tensions over the succession to the caliphate resulted in a major schism in Islam. A struggle between Ali, Muhammad’s son-in-law, and Muawiya, the Governor of Syria, led to a civil war that ended in Ali’s murder and Muawiya taking control of the caliphate in 661. While Muawiya’s descendants (the Umayyads) ruled from the Syrian city of Damascus, Ali’s followers opposed their authority, claiming the caliph should be chosen from among Ali’s offspring. After the murder of Ali’s son Husayn at Karbala in 680, the split between the Shia (those who supported the right of Ali’s descendants to rule the caliphate) and the more mainstream Sunni (who rejected this) became definitive—a division that continues to this day.

Islamic unity was fractured in other ways too; ruling over such a vast empire was almost impossible when messages from the eastern and western extremities might take months to reach the caliph’s court. Independent Muslim dynasties emerged in peripheral areas and rival caliphs appeared in the 10th century in Spain, Tunisia, and Egypt. Yet even though its political unity had been shattered, and its religious unity compromised, Muhammad’s creed was so popular and successful that by the 21st century there were about 1.5 billion Muslims worldwide.

Recite in the name of your Lord who created, Created man from a blood-clot. Qur’an (Surah 96)
The first words revealed to Muhammad (c.610 ce)
A LEADER IN WHOSE SHADOW THE CHRISTIAN NATION IS AT PEACE
THE CROWNING OF CHARLEMAGNE (800)

On Christmas Day, 800 an extraordinary event took place at St. Peter’s Basilica, Rome. Pope Leo III crowned the Frankish King Charlemagne with an imperial diadem, coronating the first emperor in the west for three centuries. The imperial crown established Charlemagne and his successors as secular rivals to the Papacy’s claim (as spiritual head of the church) to a position of authority over western rulers. In due course, Charlemagne’s empire (which later became known as the Holy Roman Empire) expanded to cover a vast area and laid the foundations for some of the future nation-states of Western Europe.

New rulers
In the half century before the Western Roman Empire finally collapsed in 476 CE, most of its

provinces were invaded by barbarian tribes who established smaller kingdoms on its former territory. At first, the Eastern Roman emperors did not recognize the legitimacy of these new kings’ right to rule in nominally Roman territory. But as the new kingdoms, particularly that of the Franks, became stronger and more unified, Eastern Roman recognition ceased to matter.

From kingdom to empire
Charlemagne, who came to the Frankish throne in 768, expanded his dominions extensively over time, conquering northern Italy and Saxony, gaining some areas from the Arabs in northern Spain, and taking Avar territories in the Danube. He strengthened Frankish administration, establishing a network of *missi domenici*—royal agents who would enforce his will in the provinces. For the first time in centuries, a powerful ruler controlled most of the former Western Roman Empire’s lands, turning them into a single political entity.

By contrast, the Papacy had experienced difficult times in the 8th century, snared in petty power politics as various Roman noble families sought to secure positions in the ecclesiastical hierarchy. After Leo was assaulted in Rome in 799, he fled across the Alps to seek help from Charlemagne, inviting him to bring order to Italy and restore the status of the church. A year later, Leo crowned Charlemagne, creating a Western emperor alongside the Eastern one.

### Carolingian Renaissance
Charlemagne pushed forward his program of reforms, issuing an edict in 802 that required an oath of loyalty to be sworn and laying out the duties of his vassals. He also invited distinguished scholars to court, and encouraged academic disciplines that had languished since the collapse of the Roman Empire, including grammar, rhetoric, and astronomy. Music, literature, art, and architecture also flourished during his reign.

After Charlemagne’s death, divisions were rife. The Frankish custom of dividing the kingdom between several heirs weakened central authority and led to civil wars; it also allowed the emergence of powerful landowners, who often challenged royal authority. Ultimately, the empire split into two main portions, which roughly equate to France and Germany today. The title of emperor was passed down to the immediate descendants of Charlemagne and then, from the 10th century, to more distantly related German princes. In this form, as the Holy Roman Empire, it was to survive to the early 19th century.

Charlemagne
Charlemagne (c.747–814) was the eldest son of Pippin III, who in 751 deposed the last Merovingian king of the Franks and assumed the royal office himself. Energetic and visionary, Charlemagne greatly expanded the Frankish kingdom. He was also a very strong ruler, implementing reforms that enhanced the authority of the monarchy and the church. In addition, he reformed the kingdom’s economy by introducing a new monetary system, standardizing weights and measures, and unifying an array of different currencies to encourage commerce and trade. His acquisition of the imperial title in 800 further consolidated his power, but at first he made no plans to pass it on. His first decision on the succession, in 806, divided the realm between three of his sons but made no mention of the office of emperor. However, the deaths of two of his sons led Charlemagne to bequeath his lands and title to a single heir—Louis the Pious.
In 618, the Tang dynasty succeeded the Sui as rulers of China, ushering in one of the most glittering eras in the country’s history. The early Tang emperors directed military campaigns that pushed China’s frontiers deep into Central Asia, and established a centralized government with a highly competent bureaucracy to administer the empire. Later rulers presided over long periods of peace, relative political stability, and economic growth that triggered a cultural and artistic renaissance and technological innovation.

But in 755, this golden age was violently interrupted by An Lushan, a discontented army general who led an internal rebellion against the Tang that plunged northern China into a devastating war, after which the dynasty was never again fully in control of the country.
An Lushan’s rebels conquered and occupied Chang’an, but the general himself remained in Luoyang, where he was later assassinated by one of his sons in a dispute over the succession.

The seeds of rebellion
Under Xuanzong (712–56), the Tang dynasty reached the zenith of its power and prestige, yet several key economic, social, and political issues threatened to destabilize it.

Firstly, the state was struggling to raise sufficient taxes to fund a sharp rise in military expenditure. The fu-bing, the cost-effective and self-supporting national militia system in which soldiers worked the land when not required for active military duty, was proving inadequate in the face of repeated invasions by neighboring groups. Xuanzong was forced to establish military provinces along China’s northern frontiers, headed by local governors who commanded huge armies, and who came to acquire considerable power and autonomy.

The Tang’s coffers were drained further by the failure of the “equal field” system, a program of land distribution and tax collection that protected small farmers from the depredations of wealthy landowners by periodically reallocating land to them. Its gradual demise enabled the nobility to grab land to increase their regional power bases, and led to unrest among the peasantry.

Lastly, earlier reforms made by Emperor Taizong (reigned 626–649) to the examination system used to recruit civil servants, which opened it up to able men from humbler backgrounds without connections, had created a bureaucracy based on merit that eroded the power and influence of the aristocracy. Xuanzong now had to manage rival factions in his court—potentially rebellious nobles, ambitious professional bureaucrats, and military governors, some of whom had begun to intervene in politics.

However, it was a series of military debacles that provided the spark for revolt against the Tang, including the defeat by Abbasid Arabs in 751 that halted China’s expansion into Central Asia.

Turning on the Tang
Discontent exploded among the military, which saw its position threatened now that the era of conquest was over. An Lushan, a prominent military governor who had become a court favorite, rose up against his masters. Claiming that the emperor had asked him to remove Yang Guozhong (the court’s chief minister, with whom An Lushan was engaged in an intense power struggle), he mobilized a rebel army and marched south.

At first the revolt looked set for success: it captured the eastern capital, Luoyang, early in 756—where An Lushan declared a rival dynasty, the Yan—before storming Chang’an, the primary capital. Xuanzong fled from his court, only just escaping An Lushan’s clutches.

After eight years of war, the Tang finally crushed the revolt, but the effort had fatally weakened it. Over the next century it lost more political power to the military, and further rebellions broke out. By 907, the empire had fragmented into local dynasties and kingdoms that vied for power for 50 years.
A S URGE IN SPIRIT
AND AN AWAKENING IN INTELLIGENCE
THE FOUNDING OF BAGHDAD (762)
In 762 the second ruler of the newly ascendant Abbasid dynasty moved the capital of the powerful Islamic Caliphate from Damascus to the newly-founded city of Baghdad. The move is often seen as marking the beginning of an Islamic golden age in which science, art, and culture flourished. The extent of Muslim technological development was demonstrated in 802 when the Abbasid caliph Harun al-Rashid dispatched an embassy to the Frankish ruler, Charlemagne, which included the gift of a water clock that chimed the hours by dropping brass balls onto cymbals at the mechanism’s base. This sophisticated timepiece was just one of the advances the Arabs had made—advances that left their European counterparts far behind.

### The rise of the Abbasids

After the death of the Prophet Muhammad in 632, his successors ruled over a growing Islamic empire (or caliphate). Following the murder in 744 of the caliph al-Walid, a member of the Umayyad family that had ruled from Damascus since 661, civil war broke out, ending only when the Abbasid dynasty came to power in 750. The Abbasids spent their first decade pacifying the empire, with the help of troops from Khurasan in northeastern Iran. These troops, a mixture of Arab-speakers, Persians, and central Asians, had been among the Abbasids’ principal backers and had provided them with a power base independent of the Arab tribes based in northern Arabia, Syria, and Iraq who had supported the Umayyads.

It was in part to provide land for his Khurasani soldiers that al-Mansur, the second Abbasid caliph, established the city of Baghdad in 762. He chose the site for its mild climate and its location on the trade routes between Persia, Arabia, and the Mediterranean. It was also just 20 miles to the southeast of the Persian royal seat at Ctesiphon, which it soon eclipsed, enabling the new dynasty to portray themselves as masters of a culture that stretched back to Cyrus the
Great in the 6th century BCE. The heart of the new capital was a mile-wide, circular enclosure in which sat the caliphal palace and main government offices.

Search for knowledge
The Abbasids laid claim not only to their predecessors’ political heritage, but also to their cultural and scientific achievements. Although the Umayyad Empire had included ancient seats of Greek learning such as Alexandria in Egypt, under their rule there had been little sponsorship of scientific endeavor. This changed under the Abbasids, who spent their time consolidating Islamic rule rather than on campaigns of conquest. They sponsored scholars to explore knowledge gained from foreign works, rather than relying solely on the guidance found in the Koran and the hadiths (the sayings of the Prophet Muhammad).

The earliest advances were made in medicine. During the mid-to late 6th century, a philosophical school at Gondeshapur in southwestern Iran became a center of medical scholarship. It was staffed mainly by Christians from the Nestorian sect, which had been persecuted in the Byzantine Empire. In 765, al-Mansur is said to have summoned staff member Jurjis ibn Jibril ibn Bukhtishu to Baghdad to diagnose a stomach complaint. So pleased was the caliph with his treatment that he prevailed upon Jurjis to stay on as his personal physician, and for eight generations until the mid-11th century, members of the Bukhtishu family occupied the position at the Baghdad court, bringing with them knowledge of Greek and Hellenistic texts and medical practices. In 800, Caliph Harun al-Rashid asked Jibril ibn Bukhtishu, Jurjis’s grandson, to head the new hospital in Baghdad, the first in the Islamic world.

Al-Mansur established a library in Baghdad to house his collection of manuscripts. This venture was made easier by the Arab adoption of paper as a medium for books, and the establishment in Baghdad in 795 of a paper mill. However, since Arabic speakers had no access to this learning, the library did little to advance an indigenous Arab scientific tradition.

House of Wisdom
To remedy this, Harun al-Rashid (caliph from 786 to 809) and al-Mamun (reigned 813–833) established the Bayt al Hikma (House of Wisdom), which not only housed the growing library, but also...
also acted as an academy for scholars and a center for the translation of key scientific works into Arabic. Among its leading scholars were Hunayn ibn Ishaq (808–873), a Nestorian Christian from al-Hira in Iraq, who translated more than 100 mostly medical and philosophical works; and Thabit ibn Qurra, a member of a pagan sect known as the Sabaeans, who translated *Elements*, Euclid’s great work on geometry, and the *Almagest*, Ptolemy’s key work on astronomy.

Translation became a highly prestigious endeavor. One Arab patron paid an extravagant 2,000 dinars a month to ensure his association with a translation of a work by the Greek physician Galen (a dinar, made of pure gold, weighed the same as 72 grains of barley). Within around 150 years, almost all of the key Greek texts that had been discovered had been rendered into Arabic. Many of them were not available in Western Europe at all, and even if they had been, knowledge of Greek had all but disappeared there. The Muslim world was therefore well set by around 850 to build on the scientific traditions of Classical and Hellenistic Greeks transmitted and developed under the Roman Empire—and to acquire a centuries-long lead over Christian Western Europeans.

**Complex calculations**

An understanding of mathematics and astronomy is essential to the calculation of the times at which Muslims must observe their five daily prayers (times that varied widely across the vast Islamic Empire), therefore both disciplines were studied assiduously. Another, separate, intellectual tradition contributed to the development of these calculation techniques, arriving in 771 with a delegation of Hindu scholars. The scholars were visiting al-Mansur’s court (which in itself illustrates the comparative openness and tolerance of the

The **House of Wisdom** played host to scholars who translated Latin and Greek works into Arabic. In doing so, they built upon classical knowledge and made breakthroughs in fields such as mathematics and medicine.

**Mathematical** advances made possible the use of algebra and decimal places.

Jews and Christians... translate these scientific books and attribute them to their own people... when they are indeed Muslim works.  

**Muhammad ibn Ahmad Ibn Abdun**  
Legal scholar (early 12th century)
early Abbasids), and brought with them India’s relatively advanced mathematics, including the use of trigonometry to help solve algebraic equations. Crucially, the Hindu mathematicians also employed a decimal notation, which one of the members of the House of Wisdom, Al-Khwarizmi (c.780–830), adopted and described in The Book of Addition and Subtraction According to Hindu Calculation. Furthermore, Al-Khwarizmi also explained a method of calculating the square roots of numbers, and pioneered work on algebraic equations. He and his fellow scholars made rapid strides in geometry, taking as their starting point Euclid’s and Archimedes’s work on spheres and cylinders.

**Astronomy and medicine**

Al-Khwarizmi compiled the first known tables of daily prayer times at Baghdad, his calculations assisted by direct astronomical observation. The early Islamic astronomers drew from Ptolemy’s Almagest, adopting his view that the Earth was at the center of the solar system, and that the planets rotated around it along the lines of eight spheres. They also learned from Hindu astronomers, translating and perfecting Indian zij, or tables of planetary positions, and continued to refine Ptolemy’s system, only occasionally (as in the work of the 10th-century astronomer al-Biruni) toying with a heliocentric system that had the sun at its center. Their calculations were made simpler when in the mid-eighth century they adopted the astrolabe, an instrument in which the celestial sphere was projected onto a flat plane marked with latitude and longitude lines.

By the 13th century, Islamic astronomy was at its zenith, and in 1259 a great observatory was constructed at Maragha in eastern Iran. Here Nasr al-Din al-Tusi and his successors made fine adjustments to account for slight discrepancies in the orbit of the planets, assisted by mechanical clocks that enabled them to record their observations in fine detail. Muslim scholars made advances in many other areas, too, first building on the base of Greek manuscripts translated into Arabic, and then making their own discoveries. They did not accept the theories of the ancients uncritically: al-Haythem (died 1039) produced a key work, the Book of Optics, in which he speculated that sight was the result of light traveling from an object to the eye, rather than the other way around as Ptolemy had theorized. Arab physicians continued to make progress, combining their practical observations with theoretical analysis. Al-Razi (died 925) produced the first description of smallpox and measles, as well as compiling a medical compendium that began a tradition of such encyclopedias, culminating in the **Canon of Medicine** by ibn Sina (who was known as Avicenna in the West). Composed around 1015, it included separate sections for diseases that are specific to one body part, and those that afflict the body as a whole.

**Islamic science spreads**

The Islamic expansion that began in the mid-7th century not only absorbed ancient centers of learning such as Alexandria, but also brought the Muslim world to the fringes of Western Europe through the conquest of Spain (from 711) and Sicily (from 827). A tradition of Islamic learning embedded itself in both areas, and particularly in the Iberian Peninsula, known to the Arabs as al-Andalus. The court established there in 756 by Abd ar-Rahman I, »
a refugee Umayyad prince who had escaped the Abbasid revolution, became a magnet for scholars from the East, and its libraries became a repository of precious ancient texts that had been translated into Arabic.

In 967, the French cleric and scholar Gerbert of Aurillac (who in 999 would become Pope Sylvester II) arrived in Spain for a three-year period of study at a monastery in Catalonia. There he had access to manuscripts that had filtered over the border from Muslim-held al-Andalus. He took back to France knowledge of Arabic technology such as the water clock and the astrolabe, and of a type of abacus that used a decimal system. This was the first example of the system’s use in medieval Europe. It was a small beginning, and one paralleled in southern Italy where a medical school was established at Salerno in the 9th century. A few Islamic manuscripts reached the school in the early years, but many more arrived in the late 11th century when Muslim doctor Constantine the African returned from Qairawan in Tunisia. He had gone there to study medicine, and brought back with him works such as the *Complete Art of Medicine* by Ali ibn al-Abbas al-Majusi (known in the West as Haly Abbas), parts of which he then translated into Latin. This translation gave Western doctors and scholars access to comparatively advanced Muslim medical knowledge.

The ancient Greek thinker Aristotle teaches Muslim students how to measure the positions of the Sun, Moon, and stars in this imagined scene from an Arabic manuscript. Classical Greek texts arrived directly from the Byzantine Empire to the West (in particular Pisa, which had a trading quarter in Constantinople), including works by the philosopher Aristotle. The main channel for the transmission of Islamic learning into Europe, however, continued to be Spain. As Islamic Spain shrank, pressurized by the Reconquista, the flow of materials accelerated. The Christian reconquest spread increasingly into Muslim emirates until, in 1085, Alfonso VI of Castile captured Toledo. The city became a center for the translation of Arabic works by an international group including the Englishman Herbert of Ketton, Slav Hermann of Carinthia, the Frenchman Raymond of Marseilles, Jewish scholar Abraham ibn Ezra, and Italian Gerhard of Cremona. In the mid-12th century, the group
translated many Arabic texts into Latin, including works on mathematics, medicine, and philosophy. Western Europe now had access to Ptolemy’s *Almagest*, and to the medical works of Galen, as well as access to new works by Arabic writers who had built on or summarized the work of their ancient predecessors, such as ibn Sina’s *Canon of Medicine*. This five-book encyclopedia became one of the most widely used treatises in European medical schools until the 16th century.

**Royal patronage**

This transmission of knowledge to the West mirrored the process by which the Islamic world had absorbed Greek learning during the great period of translation into Arabic in the 9th and 10th centuries. Noble and royal patrons played similar roles in both phases of the transmission. King Roger II of Sicily (which by 1091 had been reconquered from the Muslims) invited Arab scholar al-Idrisi to his court in 1138 with a commission to construct a map of the world based on Islamic geographical and cartographic works. The result, which took more than 15 years to complete, was by far the most accurate world map yet available to Europeans, and showed areas as far east as Korea. The map was accompanied by the *Book of Pleasant Journeys into Faraway Lands*, in which al-Idrisi’s royal patron could have read of wondrous things such as cannibals in Borneo, and the gold trade in Ghana.

**A tradition of learning**

Roger’s grandson Frederick II, Holy Roman Emperor from 1220 until 1250, continued his grandfather’s tradition of sponsoring translations of Arabic texts. A remarkable polymath who knew at least four languages, Roger so impressed his contemporaries with his learning that he became known as Stupor Mundi (“the Marvel of the World”). Among his protégés were the Scottish scholar Michael Scot, who translated key works of Aristotle on zoology, and the Pisan Leonardo Fibonacci, who had been sent by his merchant family to study mathematics at Bougie in Muslim North Africa. There Fibonacci learned of the decimal system, and in 1202 he published the *Book of Calculations*, the most detailed account yet seen in Europe of the Arabic system of numbering.

By the early 13th century, the Abbasid Empire had all but collapsed. The difficulties of ruling such a far-flung empire and the effects of a series of civil wars had led to key provinces such as Spain, Tunisia, and Egypt breaking away to be ruled by their own caliphs. Even in Baghdad, where the Abbasid caliphs clung on, they were only notionally sovereign. Real power was held by other dynasties such as the Shia Buyids, and, from 1055, the Seljuqs, a Turkish group originating in central Asia. The final blow was dealt by the Mongols, who surged westward into the Islamic world in the early 13th century. In 1258, the Mongol Great Khan Möngke unleashed an army against Iraq, which laid siege to and then sacked Baghdad, inflicting an appalling massacre on its inhabitants. The last ruling Abbasid caliph al-Musta’sim was executed, and political and cultural leadership of the Islamic world passed first to the Mamluks in Cairo and then, after their conquest of Egypt in 1517, to the Ottoman Turks.

By this time Europeans had rediscovered Greek and Roman learning in almost every field of scholarship through the medium of Arabic texts. It had taken centuries for the new material to be absorbed, and a further wave of interest in classical manuscripts in the 15th century to spark the Renaissance in Europe. The House of Wisdom founded by the Abbasid caliphs had played a key role in ensuring the survival of Greek and Roman science in the Islamic world, allowing its transmission centuries later to Christian Europe.
On a calm June day in 793, a party of men landed on the shore of the holy island of Lindisfarne in northern England, and mounted a ferocious attack on its monastery. The invaders murdered some of the monks, dragged others away into slavery, and plundered the church’s treasures before slipping away.

This unexpected assault was the first recorded raid by Vikings—pagan seafaring warriors from Denmark, Norway, and Sweden—and news of it sent waves of horror and fear across Christian Europe. Over the next 200 years, Vikings would ravage and loot settlements across large parts of the continent. But they were also colonists and traders with a sophisticated artistic culture who left a lasting imprint on the places they invaded and settled.

**An unstoppable force**

Within six years of the Lindisfarne raid, bands of Vikings—or “Danes” as they were known in Anglo-Saxon England—were targeting the wealth of other Christian sites in England, Scotland, Ireland, and France. Key to the success of these missions was the Viking longship, a slender vessel with a shallow bottom that enabled its crew to sail far up waterways and alight stealthily on shores. Each ship could carry up to 80 warriors, recruited by a warlord whose authority depended on his military prowess and his success in capturing booty for his followers.

No single motive drove the Vikings to venture across the sea. In parts of Scandinavia, population growth may have forced young men into a piratical lifestyle; in others, perhaps the increasing strength of local clan leaders sparked power struggles that pushed the losers into exile. And the newly rich trading towns in northern Europe...
were irresistible targets for a warrior society in which a reputation for valiant deeds was a great asset.

**Conquest and settlement**

As the Vikings’ raiding parties grew in size, many of the men started to settle in the territories they invaded, including those in Britain and France. In the late 9th century, England was divided into a number of kingdoms that offered no coherent resistance to the Viking challenge, while France was consumed by civil war.

This disunited opposition helped the Vikings to conquer northern and central England—where they established a kingdom that lasted almost 100 years—and to occupy land in northern France, where their descendants became French-speaking Normans. In the east, Vikings traded and raided along Russia’s rivers, which brought them silver from the Islamic world and contact with the Byzantine Empire.

By the 11th century, most of the Scandinavian kingdoms had adopted Christianity, and turned from raiding and pillaging to more organized settlement and conquest. Cnut of Denmark created a Viking North Sea empire that included Denmark, Norway, and England. Yet it did not survive his death, and in 1066, an unsuccessful attempt to claim the English throne by the Norwegian King Harald Hardrada, was the final flourish of the Viking age that began with the sack of Lindisfarne.

**Viking expansion in the North Atlantic**

The Vikings used their knowledge of winds and currents to navigate the seas and discover new lands. Around 800, they colonized the Faroe Islands, and used them as a stepping stone to explore the North Atlantic. By the 870s, their ships had reached Iceland, where settlers founded a colony that grew politically independent.

In 982, Erik the Red, exiled from Iceland for murder, stumbled upon Greenland and established a new colony there. A Norse saga tells how, 18 years later, Erik’s son, Leif Eriksson, was driven off course at sea and landed in a region teeming with hardwood forests and wild grapes that he called Vinland (Land of Wine).

Subsequent expeditions to this area, which is located in what is now Newfoundland in eastern Canada, led to a tiny Viking colony, but this was abandoned after attacks by hostile indigenous people. Nevertheless, Leif and his crew had been the first Europeans to set foot on North American soil.
F

or three days in 1078, the Holy Roman Emperor Henry IV stood penitent, barefoot in the snow outside the Italian fortress of Canossa, begging Pope Gregory VII for absolution. This event was the culmination of the Investiture Controversy, a struggle between the two men about the extent of secular authority over the Christian church, and the authority to appoint—or invest—bishops.

Both king and pope were rulers of particular domains, but they also had rival symbolic claims to lead all Christendom. An emperor had to be crowned by the pope before he assumed the imperial title. Pope Gregory VII asserted that the pope’s authority was supreme in spiritual matters, and that even in secular affairs it stood far above that of worldly princes.

When at last Gregory signaled forgiveness of the penitent emperor, it marked a bitter blow for imperial prestige and a huge triumph for the independence of the church.

The state of the church

By the early 11th century, the papacy was at a low ebb. It had failed to impose—or had lost—authority over national churches outside Italy.

IN CONTEXT

FOCUS
The medieval church and the papacy

BEFORE
1048–1053 Pope Leo IX issues decrees against simony and priestly marriage, beginning the reform movement.

1059 A college of cardinals to elect new popes is established.

1075 The Lateran Council decrees that only the pope can appoint bishops.

1076 Gregory VII deposes and excommunicates Henry IV.

AFTER
1084 Henry IV captures Rome, forcing Gregory VII to flee to southern Italy.

1095 The pope calls a Crusade, asserting papal leadership over Christendom.

1122 In the Concordat of Worms, Henry V gives up almost all rights to invest bishops.
Henry was refused entry when at last his long trek across the Alps brought him to the castle gates. Only after three days’ penitence was the emperor’s excommunication lifted.

and monarchs were appointing their own bishops, especially in Germany where the office often came with considerable territorial domains. The feeling that the church had lost touch with its roots was also widespread: monasteries had become storehouses of treasure, bishops were ruling their lands like secular lords, and clerical offices were openly sold. Itinerant preachers started to inveigh against these betrayals, and calls for reform were beginning to be heard from within the church itself.

Gregory vigorously promoted papal authority, and in 1075 a church council declared that only the pope had the power to appoint bishops or move them to a different area. Henry, facing the loss of authority over large tracts of Germany, continued to appoint bishops and called for the pope to step down. Gregory retaliated by excommunicating the king and declaring him deposed. German nobles, already feeling discontented at Henry’s attempts to centralize power, felt that this released them from their oath of loyalty, and many rose up in revolt. Caught between the papacy and the nobles, Henry eventually chose to take the road to Canossa in a humiliating retreat.

**Final agreement at Worms**

But Henry’s submission did not last. The issue of investiture was not explicitly settled and underlying dispute caused partisans of pope and emperor to clash repeatedly until 1122, when Henry’s son Henry V agreed to the Concordat of Worms. Squeezed between an increasingly assertive insistence on papal supremacy, and the growing independence of the German nobles, the emperor conceded virtually all investiture rights.

Energized by its success, the papal administration (or curia) consolidated. A growing thirst for education led to the foundation of universities such as that at Bologna where many students studied canon law. With rising confidence, popes ruthlessly persecuted heretics and swept away lax practices. The reforms strengthened the church, whose diplomatic stature grew to equal that of any monarch, and it survived in a united form until the Reformation in the 16th century. The blow to the prestige of the Holy Roman Emperors was commensurate. Secular lords seized the opportunity to magnify their own power, fragmenting the empire into a constellation of lordships and competing authorities who paid only lip service to the emperor.

**The new monasticism**

By the 11th century, many felt that monastic orders had also strayed from their original mission, accumulating wealth and abandoning spirituality. Men such as Bruno of Cologne led calls to return to a purer form of monasticism. Bruno joined a group of hermits near Grenoble in 1084. Their way of life attracted others to found similar groups, which became the core of the Cistercian Order. The Carthusians, established in 1098, had by 1153 nearly 350 houses, yet these enclosed orders did not fully answer the spiritual needs of a society that was becoming increasingly affluent, educated, and mobile. A new wave of mendicant friars appeared in the 13th century: committed to a life of poverty, they traveled and preached among the people. The Franciscans, founded in 1209 by Francis of Assisi, and the Dominicans, established in 1216 by Dominic de Guzman, represented the most successful exponents of this new apostolic form of monastic life.
A MAN DESTINED TO BECOME MASTER OF THE STATE
MINAMOTO YORITOMO BECOMES SHOGUN (1192)

When in 1192 the Japanese clan leader Minamoto Yoritomo became the military commander-in-chief, or shogun, it marked the ascent to power of a Japanese military class, the samurai, and established a line of military rulers who would govern Japan for the next 750 years.

The Japanese imperial court had been dominated since the mid-7th century by regents from the Fujiwara family, who had reduced the emperors to mere figureheads. The situation became entrenched after the capital moved (following the emperor) to Kyoto in 794. Non-Fujiwara nobles were denied preferment at court, so sought positions in the provinces. The gulf widened between the Kyoto-based bureaucrats and the regional nobility, the samurai, who assumed

1333 The Ashikaga family overthrows the Kamakura shogunate.

1467 The Onin Wars, the first of a series that plague Japan for over a century, break out.

When in 1192 the Japanese clan leader Minamoto Yoritomo became the military commander-in-chief, or shogun, it marked the ascent to power of a Japanese military class, the samurai, and established a line of military rulers who would govern Japan for the next 750 years.

The Japanese imperial court had been dominated since the mid-7th century by regents from the Fujiwara family, who had reduced the emperors to mere figureheads.

At the time of the Gempei Wars the Samurai fought as mounted bowmen, but by the 15th century the sword, in particular the long-bladed katana, had become their principal weapon.
a dominant role in local government. The Kyoto court appointed the most talented samurai as governors (zuryo), both to bind them to the imperial government and to prevent them from building their own power bases. However, the samurai developed loyalty to their extended family, or clan, and its leader rather than to the emperor, and fought one another from their power bases in the provinces. The Minamoto and Taira clans engaged in a series of these struggles which culminated in the Gempei War, during which the Taira were utterly crushed.

The shogunate
Following his victory, clan leader Minamoto Yoritomo established a parallel government based at Kamakura, about 250 miles east of Kyoto. Other clan chieftains became his vassals or gokenin, and he dispatched military estate governors to cement his control over the provinces. In 1192, Yoritomo accepted from the emperor the title of shogun, becoming the de facto military ruler of Japan.

Over the following centuries, the emperors made periodic vain attempts to reassert authority over the shogunate, but the shoguns in turn could not maintain control of the samurai and their warlords, who controlled their areas and fought among themselves. Japan dissolved into a patchwork of military warlords or daimyo, each with its own power base and retinue of samurai warriors.

Establishment of the office of shogun, which had seemed to offer Japan stability in 1192, ultimately led to the Sengoku, a civil war lasting almost 150 years. This war ended with the reunification of Japan under the new shogunate of Tokugawa in 1603.

Minamoto Yoritomo
A descendant of the royal emperor Seiwa, Yoritomo was the heir of the Minamoto clan, which had been crushed by the Taira clan after a civil war in 1159. After the war, the now orphaned Yoritomo was exiled to Hirugashima, an island in Izu province. Here he remained for 20 years before issuing a call to arms and rising up against the Taira. He established a headquarters in Kamakura, from which he began to organize the warlords and samurai into an independent government.

A decisive victory over the Taira in 1185 sealed Yoritomo’s military success, and he emerged the undisputed leader of Japan.

Yoritomo developed policies to relieve the strain between the military lords and the court aristocrats, and set up an administrative network that soon took over as the central government, but much of the remainder of his life was spent in suppressing those clans who had not accepted Minamoto dominance.
On June 15, 1215, King John of England signed a charter at Runnymede, a meadow beside the Thames. Designed to make peace between the king and a group of rebel barons, the Magna Carta, as a form of the document became known, at first seemed ineffectual. However, its assertion of the rights of subjects against arbitrary actions of the Crown—the essential principle of the rule of law—provided a blueprint which, more than eight centuries later, is still viewed as a fundamental guarantee of rights in the US and elsewhere.

Feudal society
When King John acceded in 1199, England was a feudal society, a land-based hierarchy headed by the king, who owned all the land. The tenants-in-chief (or barons) received land from the king in exchange for loyalty and military service. They in turn leased the land to their own armed retainers, who leased to peasants, or villeins. Yet monarchs, especially in England, were levying an ever-increasing series of taxes and additional financial burdens on their barons. English kings from Henry I (1100–1135) onward also sought to centralize administration, partly by establishing a series of royal courts. These royal courts raised revenue for the Crown through fines and charges—but at the expense of the barons, who had previously raised those funds from their own local tribunals.

The exactions of King John
The barons’ discontent at these growing demands intensified under King John. Ruinously expensive campaigns against the French in 1200–04 had already resulted in the loss of Normandy (and earned the

AFTER
1216 The Magna Carta is reissued on the accession of Henry III, and again in 1225 in exchange for a tax grant.
1297 The Magna Carta is again confirmed and written into statute law by Edward I.
1970 A bill repealing ancient statute laws leaves untouched four chapters of the Magna Carta, including Chapter 39.

The Magna Carta included clauses relating to royal forests: the barons aimed to limit the king’s rights under England’s Forest Law, regulate forest boundaries, and investigate officials.
king the mocking nickname “Lackland”). Scutage, a further cash levy that left many barons in debt to money-lenders, was bitterly resented. Not only was the king proving lamentably unsuccessful in war, but he had also broken the unspoken contract between himself and the barons, that allowed them to run their lands as they chose.

Hoping for support from the pope, who had excommunicated John in 1209, the rebellious barons confronted the king. Attempts at diplomacy failed, and by May 1215, the barons had occupied London, forcing John to enter into a treaty with them to avoid a civil war. After careful direction of negotiations by Archbishop Stephen Langton of Canterbury, the agreement—more a truce than a peace—was signed.

**Provisions of the charter**
The charter was known as the Magna Carta, or Great Charter, to distinguish it from a more restricted Forest Charter issued in 1217. Much of the Magna Carta dealt with redressing baronial grievances, but the section that has exerted the most influence down the ages was Chapter 39. This open-ended clause protected all “free men” from arbitrary actions by the Crown such as arrest or confiscation of land.

The charter survived the civil war that broke out soon after the Magna Carta was agreed, and the papal repudiation of the charter’s terms in August 1215, which led to the barons’ excommunication. Chapter 39 was extended under a 1354 law of Edward III to protect not only “free men” (a small minority in England where most people were technically serfs), but also any man “of whatever estate or condition he may be.” It survived longer than most of the other provisions, including the security clause that allowed barons to seize all the king’s land if he failed to fulfil his obligations under the agreement.

What had seemed a small concession that day in Runnymede provided a long-lasting rallying cry for opponents of royal tyranny.

---

**Influence of the Magna Carta**

The Magna Carta has acquired an almost mythical status as the constitutional bedrock of subjects’ rights. It contributed to the development of parliament from the 13th century, and was used by 17th-century rebels to argue against the divine right of kings propounded by the Stuart monarchs Charles I and James II. Several American colonies’ charters contained clauses modeled on it, while the design of the Massachusetts seal chosen at the start of the Revolutionary War depicts a militiaman with sword in one hand and the Magna Carta in the other. Revolutionary feeling was fueled by Americans’ belief that the Crown had breached the fundamental law enjoyed by all English subjects, and both the United States Constitution, enacted in 1789, and the Bill of Rights adopted two years later, were influenced by the Magna Carta’s limitations on the arbitrary powers of a government against its subjects.
In March 1279, Mongol warriors swept through southern China, capturing the last strongholds of the Chinese Song dynasty. This defeat, which heralded the start of the Yuan dynasty, marked the culmination of the Mongols’ rise in under 70 years from an obscure nomadic group from the Central Asian steppes to the masters of a vast empire stretching from China to eastern Europe. One of the major challenges they now faced was to make the transition from roving tribesmen to settled conquerors.

**The rise of the Mongols**

At the start of the 13th century, the Mongols had consisted of many different warring clans. However, in 1206 Temüjin—later known as Genghis Khan—proclaimed himself the ruler of a united Mongol nation. Shrewd and ruthless, Genghis diverted his people from inter-clan warfare and directed their energies to the more lucrative business of invading—first neighboring tribes in the steppes, then more organized states such as Persia, Russia, and northern China (1219–23). He gave the Mongol hordes a proper military structure and exploited the skills they had learned from their nomadic lifestyle: as expert horsemen, the soldiers were masters of mobile warfare and able to descend with devastating force and lightning speed on their opponents.

**The Mongols’ rule in China**

Genghis’s grandson Kublai Khan ruled China from 1260, but the challenges of mediating between the nomadic traditions of the Mongols and the complex culture of the conquered proved difficult.

Paper money was invented by the Chinese c.800. By the Yuan dynasty, banknotes (such as the one above from 1287) were issued by the government.
Grandson of Genghis Khan, Kublai Khan (1215–94) governed northern China for his elder brother Möngke, who became Great Khan (the senior Mongol ruler) in 1251. Kublai’s restoration of Chinese-style administration displeased many Mongols and he was nearly removed in 1258, but Möngke’s death led to Kublai achieving the position of Great Khan himself in 1260. Kublai established a bureaucracy staffed largely by Chinese officials, but he placed Mongol officers (darughachi) in key towns to ensure loyalty to the empire. He took measures to restore the economy, initially encouraged religious tolerance, and welcomed foreigners such as Marco Polo to the Mongol court, aware of the expertise they might bring. After the successes in China, Kublai dispatched armies to Japan, Annam (Vietnam), Myanmar (Burma), and Java; however, these either failed or did not establish a lasting Mongol presence. By his death, Kublai was a disappointed man, who drank to excess, suffered from obesity, and had to be carried to his final campaigns in a litter.

The old informal hierarchies of the steppes no longer sufficed to administer a land that contained great cities, and the immediate rewards of plunder were replaced by the deferred benefits gained by good governance and taxation. As a result, many Mongols missed the old ways. To appease his fellow Mongols, Kublai gave them greater rights and privileges than the native Chinese. Meanwhile, to gain favor with the traditional Chinese elites, he promoted Confucian scholars, funded Taoist temples, and had his son educated in Buddhist scripture. He also set up schools for peasants and introduced the Mongol postal system of using horses and relay stations to link up the empire, which benefited the merchants.

The end of the empire
The need to restore stability in northern China delayed Kublai’s attempts to subjugate the Song in the south until 1268. Although ultimately successful, the 11-year campaign was ruinously costly. To preserve their warrior identity, the Mongols needed the spoils of conquest to fund their huge army. Kublai’s successors failed to work out how to preserve their identity while also keeping their monopoly of power, and the Mongol military gradually declined. After decades of famine, lethal epidemics, and corruption at court, in 1368 the heirs of Kublai were defeated in a rebellion led by Zhu Yuanzhang, founder of the Ming dynasty. After more than a century of occupation, China was back in the hands of the native (Han) Chinese.
I did not tell half of what I saw, for I knew I would not be believed.

Marco Polo reaches Shangdu (c.1275)

Venetian merchant Marco Polo’s arrival at Shangdu, the capital of the Great Khan Kublai, in 1275 marked the end of a four-year journey. He had traveled from Italy to the Mongol capital Shangdu along the length of the Silk Road, an ancient network of routes that had been carrying precious goods between China and Europe for centuries. The Silk Road had first become a conduit for trade when the Chinese Han Dynasty pushed into Central Asia in the late 2nd century BCE. From then on, goods such as jade and silk were carried west, passed from caravan to caravan by a series of merchants,

The **collapse of Mongol rule** and rise of the Ottoman Empire render the route’s territory less secure.
to be met by caravans of furs, gold, and horses traveling in the opposite direction. Chinese inventions ranging from gunpowder and paper to the magnetic compass were also brought to the west along the route, arriving at Constantinople and the Black Sea ports, the western end of the route where Genoa and Venice chiefly traded.

**Mongol revival of the route**

By the 13th century, empires that had controlled sections of the Silk Road had fragmented. This left the route less secure for travelers, and so deterred merchants from using it. However, following Mongol conquest of the area between 1205 and 1269, the area was controlled—if loosely—by a single authority, the Great Khan, so a merchant could travel from Khanbalik (Beijing) to Baghdad without leaving Mongol territory. This renewed stability encouraged a revival of trade.

At around this time, European merchants’ horizons were also expanding. In the early Middle Ages, traders could work only locally, and transport their goods to points where they might connect to longer-distance trade routes. From the 12th century, Italian city States such as Pisa, Genoa, and Venice, pioneered maritime trade across the eastern Mediterranean, which enabled merchants to connect directly with sea routes that linked West Asia and Egypt to China via the Indian Ocean.

The profits for merchants taking advantage of the “Pax Mongolica,” or Mongol peace, could be huge. In the late 13th century, the costs of setting up a caravan might amount to 3,500 florins, but the cargo, once sold in China, could yield seven times that sum, and by 1326 Genoese traders were a common sight in the principal Chinese port of Zaitun.

**Decline of land trade**

The Silk Road flourished for another century, but the collapse of the Mongol Ilkhanate of Persia in 1335, and the overthrow in 1368 of the Yuan, the Mongol ruling dynasty in China, once again left the route divided between politically weak powers. It was also blocked to European traders at the western end by the growth of the Muslim Ottoman Empire.

A taste of the profits of long-distance trade in luxury goods encouraged European powers to seek alternatives to the now defunct Silk Road, this time by sea. In 1514, Portuguese merchants arrived off the coast of China, near Guangzhou, eager to take up the direct trading links with China that had been pioneered two and a half centuries earlier by their illustrious predecessor, Marco Polo.

---

**Marco Polo**

At just 17 years old, Marco Polo (1254–1324) set off from Venice to the court of the Mongol ruler, Kublai Khan. He traveled with his father and uncle, who had previously visited China and been entrusted by Kublai with a message for the pope. Polo was received with great favor at the Mongol court and stayed in China for 17 years. He traveled extensively throughout the country in the Khan’s service, leaving for home at last in around 1291.

During a naval battle in 1298, Polo was captured and imprisoned by the Genoese. The stories he told of his sojourn in the lands of the Great Khan attracted the attention of his cell mate, Rustichello, who wrote them down, embellishing them as he went along. The resulting book was translated into many languages and includes much invaluable information about late-13th-century China. After his release, Polo returned to Venice, where he lived for the rest of his life.

1071 Seljuk Turks defeat and capture Byzantine emperor, Romanus Diogenes.
1095 Byzantine emperor Alexios sends to pope for help.

AFTER
1120 The Order of the Knights Templar is founded.
1145 The Second Crusade is launched.
1187 Muslim leader Saladin captures Jerusalem, and the Third Crusade is launched.
1198 Baltic Crusade begins.
1291 Muslim forces complete the reconquest of Palestine and Syria.

On July 15, 1099, some 15,000 Christian knights surged into Jerusalem after a month-long siege. The victorious crusaders slaughtered Muslim defenders and Jews alike in a bloody act that marked the beginning of 200 years of Muslim–Christian warfare in the Holy Land.

Defending Christianity
Jerusalem had fallen into Muslim hands in 639. Neither the Byzantine emperors in Constantinople nor the Christian kings in Western Europe had the political willpower or the strength to reverse the conquest, although the city was sacred to both. Victorious crusaders flooded into Jerusalem, and in a ruthless assault seized the city from the Fatimid caliphate, laying the foundations for a new kingdom.

In the 11th century, however, the advances of a new group, the Seljuk Turks, disrupted the pilgrimage routes to Jerusalem, and the Turks’ defeat of the Byzantines at Manzikert threatened to push the frontiers of Christianity back to the gates of Constantinople. In 1095, Emperor Alexios I Komnenos sent emissaries to Pope Urban II asking for help to bolster the Byzantine retaliation.
The Just War
Pope Urban readily seized a cause that would enhance papal prestige. In a sermon of 1095, he described atrocities against Christians in the Holy Land, calling for an expedition to free them. Christian warriors rallied to the cause, eager to gain both salvation and plunder by joining a so-called Just War in God’s name. Some 100,000 crusading knights, mostly French and Norman, set out in 1096. Progress to Jerusalem was slow: the crusaders suffered several setbacks at the hands of the Seljuk Turks, and the long siege of Antioch severely tested their morale, yet they pressed on and, led by the French knight Godfrey of Bouillon, at last captured the Holy City.

In the area they had conquered, the crusaders established four states, at Edessa, Antioch, Tripoli, and the Kingdom of Jerusalem, known collectively as Outremer. To withstand the vigorous Muslim counter-attacks, the crusaders built a dense network of fortresses such as Beaufort, Margat, and Krak des Chevaliers, which dominated strategic routes into the Holy Land.

As the initial crusading impulse waned, Outremer began to suffer from a shortage of manpower. This was partly resolved by the founding of crusading orders such as the Templars and Hospitaller knights, organizations who swore monastic vows to defend the Holy Land.

Further Crusades
However, even this was not enough, and when Muslim armies captured Edessa in 1144, a Second Crusade was called. This, and the Third Crusade mustered in response to the catastrophic loss of Jerusalem in 1187, attracted participation at an even higher level, as monarchs such as Louis VIII of France, Richard I of England, and the Holy Roman Emperor Frederick Barbarossa assumed their leadership.

By 1270 there had been eight further crusades, and the movement had extended to include attacks on Muslims in North Africa; joining the Reconquista (the Christian reconquest of Islamic emirates in Spain); launching expeditions against pagan groups in eastern Europe, and even Christian heretics, such as the Cathars in southern France. In the Middle East, however, the emergence of stronger Muslim states, such as the Mamluks in Egypt, able to mount a strong resistance to crusader pressure, rendered the later expeditions largely ineffectual.

Jerusalem fell to the Muslims for a final time in 1244. The last crusader stronghold in the Holy Land, the city of Acre, was taken by the Mamluks in 1291.
In the early 12th century, much of mainland Southeast Asia, including Cambodia, and parts of Vietnam, Laos, and Thailand, was controlled by the Khmer Empire from its capital at Angkor (in the northeast of present-day Cambodia)—an impressive urban complex with residential areas, temples, and a network of water reservoirs, built by a succession of god-kings who ruled as the earthly representatives of the Hindu god Shiva.

Around 1120, the Khmer king Suryavarman II commissioned an ambitious new construction project—a 200-hectare (500-acre) temple complex dedicated to the Hindu god Vishnu that would also record the king’s achievements. His spectacular Angkor Wat, completed 37 years later, was enclosed by a huge moat, adorned with lotus-shaped towers, and decorated with an 2,600ft-long (800m) gallery of fine bas-reliefs depicting scenes from Hindu mythology and the king as the embodiment of Vishnu.

Angkor Wat is a testament to the remarkable productivity and creativity of one of the greatest powers in Southeast Asia’s history, yet its construction also marked the onset of its decline, as later kings faced foreign invasions, shifts in trade, and wars with rival kingdoms that shrunk its territory. The empire’s fortunes were revived under Jayavarman VII, who made Mahayanana Buddhism the state religion, and initiated a building spree at Angkor, but his death in 1218 left it fatally weakened.

Outside influences
The Khmer Empire was preeminent among the powerful states that had emerged in present-day Cambodia, Myanmar, and the islands of Java and Sumatra in Indonesia toward the end of the first millennium CE. During the states’ formation, their societies had been profoundly influenced...
After its rediscovery by Europeans in the late 19th century, Angkor Wat suffered decades of looting and unregulated tourism; it was made a UNESCO World Heritage Site in 1992.

**Maritime empires**

While the Khmer Empire held sway in mainland Southeast Asia, in the Indonesian archipelago, the empire of Srivijaya, with its base at Palembang in Sumatra, dominated commerce by controlling the two passages between India and China—the straits of Malacca and Sunda. Over time, it had grown rich from its trade in the spices, especially nutmeg, that Europe, India, and China craved, but by the end of the 12th century it had been reduced to a small kingdom, and was later eclipsed by the Majapahit in Java.

In the late 13th century, Mongol forces under the Chinese emperor Kublai Khan invaded Vietnam, Java, and Myanmar, and although these campaigns failed, in their wake, the Khmer lost control of eastern Thailand. In the early 1400s, the empire contracted further as armies from Champa (now in Vietnam) and Ayutthaya (now in Thailand)—seized more of its land. In 1431, the latter took Angkor, and the capital was later relocated to the coast, leaving Suryavarman’s spiritual masterpiece to be reclaimed by the jungle.

**Suryavarman II**

One of the Khmer Empire’s greatest kings, Suryavarman II ascended to the throne in 1113, after killing his rival, and reunited Cambodia after decades of unrest. He quickly resumed diplomatic relations with China, and in 1128 his kingdom was recognized as a Chinese vassal, which helped deter neighboring states from attacking it. Suryavarman was a warlike leader, waging campaigns in what is now Vietnam against the Dai-Viet between 1123 and 1136, and against the Khmer’s traditional enemy to the east, Champa, in 1145. He also pushed the empire’s boundaries deep into Thailand and made advances against the Pagan kingdom of Myanmar.

As well as the awe-inspiring Angkor Wat, which remains the largest religious structure in the world, the king also built other temples in the same style at the capital. His political and military achievements were less enduring, however—when he died in 1150, in the middle of a campaign against Champa, the empire was convulsed by civil war and pushed to the brink of destruction.

FOCUS
Islam and trade in West Africa

BEFORE
1076 Ghana is conquered by the Almoravids, who establish an Islamic Empire from Spain to the Sahel.
1240 Sundjata establishes the Muslim Malian Empire, capturing Ghana and gaining control of its strategic salt, copper, and gold mines.

AFTER
1433 Mali loses control of Timbuktu, which is incorporated into the Songhai Empire of Gao.
1464 Sonni Ali, king of Songhai, begins the expansion of his empire, as Mali contracts further still.
1502 Mali is defeated by the Songhai Empire.

Islam spreads into West Africa from the 9th century, in the wake of trans-Saharan trade.

Islam continues to take root throughout West Africa, even after the collapse of Mali.

Mansa Musa’s hajj showcases the wealth and power of the Muslim Malian kingdom.

Muslim scholars from other Islamic countries are attracted to Mali and it becomes a great center of Islamic learning.

The Muslim West African kingdom of Mali burst onto the world stage with a flourish in the early 14th century, when its fabulously wealthy ruler, Mansa Musa, made an unusually extravagant hajj (pilgrimage) to Mecca, supported by the huge profits made by Mali’s control of the trans-Saharan caravan trade. The emperor’s year-long expedition became legendary in the Muslim world, and even in Europe, and his subsequent promotion of Islamic culture and learning in his kingdom was symbolic of the faith’s gradual infiltration of the trading empires of West Africa.

African trade and Islam
States had begun to form on the fringes of the Sahel region (a semi-arid zone just south of the Sahara) around the 5th century,
beginning with the Kingdom of Ghana, which became known as “the land of gold,” a reference to the source of its huge wealth. In the 7th century, the Arab conquest of North Africa gave a new impetus to trans-Saharan trade—the Muslim states had a huge appetite for West African gold and slaves. As this trade grew, Muslim merchants, and with them Islam, were drawn to the area between the headwaters of the Niger and Senegal rivers.

However, peaceful trading was soon followed by conquest. The Almoravids, a Moroccan Berber dynasty, swept south in 1076 and sacked Ghana's capital, shattering its authority over the region.

Ghana's reduced power opened up a vacuum that was gradually filled by Mali, a state founded around the Upper Niger River, which began to expand in the mid-13th century.

Mansa Musa’s hajj attracted the attention of Europe’s cartographers: the emperor is depicted on this Catalan Atlas of 1375, bearing a gold nugget and a golden scepter.

Under Mansa Musa (ruled 1312–37), Mali reached its greatest extent and power, having forged highly lucrative caravan connections with Egypt and other important trade centers in North Africa. Gold, salt, and slaves were taken north in exchange for textiles and manufactured goods.

**A center of scholarship**

Mansa Musa was not the first West African ruler to make a hajj to Mecca, but the huge scale of his entourage—more than 60,000 people, including 500 slaves who bore staffs of pure gold—impressed his observers, and was a potent expression of his wealth.

The expedition had a purpose beyond advertising Mali’s prestige however, as the king invited Muslim scholars and a great architect, Abu Ishaq al-Sahili, to make the return journey with him. The latter built West Africa’s first mud-brick mosques at Timbuktu and Gao, trading posts recently captured from the neighboring Songhai.

Under Mansa Musa’s guidance, Timbuktu became Mali’s main commercial hub—boosted by its advantageous location at the junction of the desert trade and the maritime routes down the Niger—and began its rise as the region’s intellectual and spiritual capital. A teaching center grew around al-Sahili’s Sankore mosque, laying the foundations for the celebrated Sankore University and other madrasas (Islamic schools).

After Mansa Musa’s death, Mali initially thrived under his son, but thereafter, weak rulers, external aggression, and the need to keep rebellious tribes in check sapped its strength until it was eclipsed by the Songhai Empire of Gao: by 1550 it was no longer a major political entity. Mansa Musa’s great empire—one of the most prosperous states in the 14th century—may have been short-lived, but his celebrated hajj had longer-lasting effects, helping to spearhead the spread of Islamic civilization in West Africa.
GIVE THE SUN
THE BLOOD
OF ENEMIES TO DRINK
THE FOUNDATION OF TENOCHTITLAN (1325)
In 1325, a band of Central American refugee warriors, known as the Aztecs, saw a sign their patron god Huitzilopochtli had long ago prophesied—an eagle perched on a cactus, marking the spot they had been told to settle. Before long, they had built a temple that became the nucleus of their capital, Tenochtitlan. Within two centuries, the city was the center of the most predominant empire in the history of Mesoamerica—a large region that shared a pre-Columbian culture and extended from modern-day central Mexico southward to Belize, Guatemala, El Salvador, Honduras, Nicaragua, and northern Costa Rica. This progress was paralleled by the growth at much the same time of Cuzco, the capital of the Incas—an Andean people of humble beginnings, who in just a few decades created the largest state South America had yet seen.

Aztec foundations
The Aztecs may have begun their wanderings in northern Mexico around 1200. For the next 100 years they eked out a miserable existence as mercenaries or barely tolerated squatters, their plight not aided by their reputation as cruel warriors. Frequently, they had to flee after committing violent acts, at times involving human sacrifice; indeed, their flight to Tenochtitlan was prompted by one such incident. The Aztecs had asked their host, the lord of Culhuacán, whether he would give his daughter as a bride for their chief. He agreed, believing she would be greatly honored as queen; however, to his horror they killed and flayed her as a sacrifice to their deity Xipe Totec. Driven out by the lord and his soldiers, the Aztecs fled southward toward the future site of Tenochtitlan.

Although the soil around Lake Texcoco, on which the island of Tenochtitlan was situated, was marshy and there was very little timber available, the capital was easily defensible and the Aztecs used it to consolidate their position. Initially shielded by a treaty with the Tepanec ruler Tezozomoc, who dominated the Valley of Mexico from 1371 to 1426, the Aztecs went on to form a Triple Alliance with the cities of Texcoco and Tlacopan in 1428—a union that kick-started a period of imperial expansion.
The founding of Tenochtitlan is illustrated in the Codex Mendoza: a record of Aztec history and culture created c.1540 by an Aztec artist for presentation to Charles V of Spain.

whose chiefs, together with priests, ruled on important decisions. In 1376, the Aztecs chose for the first time an overall leader (tlatoani), who came to serve as war leader, judge, and administrator for the burgeoning empire. Under Itzcoatl (1427–40), Moctezuma I (1440–69), Axayactl (1469–81), and Ahuitzotl (1486–1503) Aztec armies subdued their neighbors in the Valley of Mexico and then spread outward, reaching Oaxaca, Veracruz, and to the edges of land controlled by the Mayan people in the east of modern-day Mexico and Guatemala.

As the Aztec Empire expanded, society was transformed. A warrior elite emerged, while at the bottom of society bondsmen (mayeques), who owned no land, were bound by labor service to their lords. The militaristic nature of Aztec society was accentuated by an education system in which all males received military training (in separate schools for nobles and commoners). This reinforced the warrior ethos and gave the Aztecs an incalculable advantage over neighboring tribes in Mexico.

The imperial system

Tenochtitlan was adorned by many temples to the gods of the Aztec pantheon. Each god had their own temple, with the Templo Mayor having twin shrines dedicated to Huitzilopochtli and Tlaloc, the rain god. At these temples a stream of human victims was sacrificed—up to 80,000 at the rededication of the Templo Mayor in 1487—by burning alive, decapitation, or cutting open the chest and removing the heart.

Many of the Aztec battles were “flower wars”: ritual affairs in which opponents were captured (rather than killed) and sacrificed to placate the Aztec gods, who were believed to need blood to sustain them and keep the sun moving across the sky.

Tenochtitlan also exacted tribute from its subjects. Although there was very little in the way of an organized government bureaucracy, there were tax collectors, who crisscrossed the 38 provinces of the Aztec Empire and levied tribute, which included 7,000 tons of maize, 4,000 tons of beans, and hundreds of thousands of cotton blankets.
each year. The empire depended on this tribute to reward the nobility and the warriors, who ensured that the towns subjugated by the Aztecs remained submissive—little mercy being shown to those who revolted.

While the Aztecs provided some security to their subjects, they gave little else. At Tenochtitlan, artificial islands (chinampas) were created at great expense to expand the land available to produce food, but no such works were carried out for the subject cities. Defeated states did not provide troops for the Aztec army, and so did not share in the spoils of future victory, and little effort was made to propagate the Aztec language. It was an empire built on fear and in the end it proved brittle: when it was invaded by a small party of Spaniards led by Cortes in 1519, the subject peoples rallied to the newcomers rather than defending the Aztecs, and the empire collapsed within two years.

Inca beginnings
The Incas, whose heartland lay high in the central Andes around Cuzco, in modern-day Peru, had similarly humble origins to the Aztecs, but their rise to imperial status was, if anything, even more meteoric. They began as a small, somewhat disregarded tribe and developed their own strategies to co-opt neighboring groups into a successful empire.

The Incas’ origin myth told of their emergence from a cave in the high mountains, from where their first leader—Manco Capac—led his people to Cuzco. It is generally believed that the Incas arrived in the region around 1200, and for two centuries they remained a relatively insignificant farming group, with their society divided up into clans (ayllus) of roughly equal status.

Inca expansion
The Incas began to make their mark as a major power around 1438, when the neighboring Chanca people attempted to push the Incas out of the Cuzco valley. By this time, the Incas had a supreme leader (the Sapa Inca), and although the incumbent Viracocha was unequal to the task, his son Pachacuti defeated the invaders, and then led Inca armies to conquer the rest of the Cuzco valley and the southern highlands around Lake Titicaca. Under Pachacuti’s son Topa Inca Yupanqui and grandson Huayna Capac, the Incas overcame Chimor (the largest coastal state) in about 1470. They then absorbed the rest of the northern highlands and extended to parts of modern-day Ecuador and Colombia and south to the deserts north of Chile.

Unlike the Aztecs, the Incas recruited troops from among the conquered peoples (placed under the command of Inca officers), thus providing them with the lure of plunder in return for their loyalty.

Inca communication
The empire of the Incas was highly centralized; censuses recorded the number of peasants, who all owed labor service (mitad) to the Sapa Inca. This level of organization enabled the construction of public works on a vast scale. Particularly vital was the extensive road network, which extended nearly 25,000 miles (40,000 kilometers) long and was dotted at regular intervals with resthouses that facilitated rapid transit for the army and provided a very efficient system of communication across the far-flung Inca domains. At the
same time, the Inca domestication of the llama as a beast of burden made it easier to transport heavy loads across the empire.

Unlike the Aztecs, the Incas actively sought to spread their own language (Quechua) and system of religious beliefs, which was initially based around the worship of Inti (the sun god), but which came to feature prominently Viracocha—a supreme creation god and therefore considered a more suitable deity for releasing a large proportion of their population to fight in the armies that conducted their campaigns of expansion. They also reorganized the traditional tribal structure to favor a warrior and noble elite. In both cases, the momentum of conquest demanded further wars to reward the warrior caste or to provide an incentive for newly conquered peoples to remain loyal and thus to gain the rewards of participation in new campaigns.

Neither the Aztecs nor the Incas survived long enough to govern after their expansion slowed down. Had they done so, they might have developed strategies to bring long-term stability to their empires, or might have declined to the status of competing city-states fighting to control limited resources. Instead, the Spanish conquest of the Aztecs in 1521 and their defeat of the last Incas by 1572 put paid to the ambitions of both empires and left the Spanish firmly established as colonial rulers in the region for the next 300 years. ■
SCARCE THE TENTH PERSON OF ANY SORT WAS LEFT ALIVE
THE OUTBREAK OF THE BLACK DEATH IN EUROPE (1347)

In late November 1347, a galley entered the Italian port of Genoa, having fled a Tatar siege of Kaffa in the Crimea. It bore a deadly cargo: the bubonic plague. Within a mere two years, this lethal pestilence had killed more than a third of the population of Europe and the Middle East, and altered the regions’ economic, social, and religious makeup forever.

**Spread of the Black Death**
Having probably originated in Central Asia or western China in the 1330s, the plague’s initial progress westward was slow, but after it reached Crimea and Constantinople in 1347 it spread rapidly along maritime trade routes. Having hit Genoa, it appeared quickly in Sicily and Marseilles; by 1348 it had struck Spain, Portugal, and England, and it reached Germany and Scandinavia by 1349.

The epidemic’s main vector was infected fleas and the rats that harbored them, both of which flourished in the unsanitary conditions of the time. The main symptoms of the disease were swellings, known as buboes, that appeared in the groin, neck, or armpits. These were followed by black blotches on the skin (hence “Black Death”) and then, in around three-quarters of cases, by death.

Contemporaries ascribed the causes of the pestilence variously to divine punishment for immorality, adverse conjunctions of the planets, earthquakes, or bad vapors. There was no cure, but preventive advice included abstinence from hard-to-digest food, the use of aromatic herbs to purify the air, and—the only effective measure—avoiding the company of others.

More than a hundred million people may have died of the plague; estimates put the world population

"Employees are refusing to work unless they are paid an excessive salary."

**The Ordinance of Labourers, 1349**
The plague’s catastrophic toll cast a long shadow over contemporary social attitudes. A landscape of mass graves, abandoned villages, and an all-pervading fear of death deepened the sense that God had abandoned his people, and diluted the claims of traditional morality. Crime rose: the incidence of murder in England doubled in two decades from 1349. Flagellants roamed the countryside, scourging themselves with knotted ropes, until a Papal bull banned the practice in 1349. Bequests to charitable foundations—hospitals in particular—rose as the rich gave thanks for their survival. Artistic production tended to the morbid: depictions of the Dance of Death appeared, showing Death cavorting among the living; and writers such as Boccaccio, who chronicled the plague in his Decameron, stressed the briefness and fragility of life.
I HAVE WORKED TO DISCHARGE HEAVEN'S WILL

HONGWU FOUNDS THE MING DYNASTY (1368)
surrounded by officials at the imperial palace in Nanjing, Zhu Yuzhuang, the son of poor peasant farmers, offered sacrifices to Heaven and Earth as he was proclaimed first emperor of China’s Ming (“brilliant”) dynasty.

It was the culmination of a remarkable rise to power by the monk turned rebel general, who had ousted the despised Yuan dynasty—founded by Kublai Khan, the Mongol conqueror of China—the country’s rulers since 1279. Zhu reigned as emperor Hongwu (“Vastly Martial”—a reference to his military prowess) from 1368 until his death in 1398, by which time he had firmly established one of China’s most influential, but also most authoritarian, dynasties. He and his successors brought three centuries of prosperity and stability to the country, establishing its government and bureaucracy in a form that would endure, with slight modifications, until the demise of the imperial system in 1911, and broadening the base of its economy.

Driving out the Mongols
Zhu’s new dynasty arose from the chaos that accompanied the decline of the Yuan. In the 1340s and 50s, factionalism in the Mongol court, rampant government corruption, and a series of natural disasters, including plagues and epidemics, resulted in wholesale breakdown in law and order and administration as peasant groups rose up against their faltering
foreign overlords. Zhu himself lost most of his family in an outbreak of plague in 1344, and after a few years spent as a mendicant monk, begging for food, he joined the Red Turbans, one of a constellation of native Han Chinese peasant secret societies in rebellion against the Yuan. Determined, ruthless, and an able general, the young rebel climbed the ranks to the leadership of the Red Turbans, and later overcame his rivals to become the national leader against the Yuan.

Zhu took control of much of southern and northern China and declared himself emperor before pushing the Mongols out of their capital at Dadu (Beijing) in 1368. The rest of the country was then subdued, although the Mongols resisted in the far north until the early 1370s, and the unification of China was not achieved until the defeat of the last Mongol forces in the south in 1382.

**Reform and despotism**

Zhu’s first priority as emperor Hongwu was to establish order—decades of conflict had ravaged China and impoverished its rural population. His humble beginnings may have influenced some of his early policies: responsibility for tax assessment was entrusted to rural communities, sweeping away the problem of rapacious tax collectors who had preyed on poorer areas; slavery was abolished; many large estates were confiscated; and lands owned by the state in the underpopulated north of the country were handed to landless peasants, to encourage them to settle there.

From 1380, Hongwu instituted government reforms that gave him personal control over all matters of state. After executing his prime minister, who had been implicated in a plot to overthrow him, he abolished the prime ministership and the central secretariat and had the heads of the next layer of government, the six ministeries, report directly to him, ensuring he oversaw even minor decisions.

From then on, Hongwu acted as his own prime minister. His workload was almost unbearable—in a single week-long stint, he had to scrutinize and approve some 1,600 documents—and as a result, the state became incapable of responding swiftly to crises. Although in time a new »
grand secretariat emerged—an advisory board through which the emperor responded to the six ministries and other government agencies—the Ming retained a more autocratic and highly centralized structure than that of previous Chinese dynasties. This was reflected in the protocol of the Ming court, too: under the Song dynasty (960–1279), the emperor’s advisers had stood before him to discuss matters of state, but under the Ming they were required to kowtow—kneel and knock their heads to the floor—before him, a reverential acknowledgment of his absolute power and superiority.

Curbing the military
In the later years of the Yuan dynasty, the state had been torn apart by competing power bases outside the central court, and in a bid to avoid this scenario, Hongwu diluted the strength of the army. Although he adopted the Yuan military system—establishing garrisons in key cities, particularly along the northern frontier, where the threat of nomad incursions was ever-present, and creating a hereditary caste of soldiers that supported itself on land granted by the government—he also ensured that military units were periodically rotated through the capital for training, and that a group of centrally selected officers shared authority in the army with the garrison commanders, thus preventing the rise of influential warlords with a strong local base.

Perfecting the civil service
Hongwu also had a deep mistrust of the elite scholar class that had been at the heart of government for centuries. However, he was aware that they played a vital role in the efficient running of the state, and

1 Meridian Gate The grand entrance had five gates. The central one was always reserved for the emperor.

2 The Golden Water Bridge Crossing points like the bridges were arranged in odd numbers. Only the emperor could use the central passage, with the next highest rank able to use the neighbouring paths.

3 Outer Court This area was reserved for state affairs and ceremonial purposes.

4 Inner Court Only the emperor and his family could enter the Inner Court.

5 The Palace of Heavenly Purity To fool assassins, the palace had nine bedrooms: the emperor slept in a different one each night.
He promoted education and trained scholars specifically for the bureaucracy. In 1373, he suspended the traditional examinations used to recruit civil servants and ordered the establishment of local county and prefectural schools. From these, the best candidates would be called for further study at a national university in the capital, where eventually 10,000 students from the original intake were enrolled. The civil service examinations were restored in 1385, when the emperor considered the well-trained graduates of the university ready to take them, and were so competitive that soldiers were stationed outside the cubicles where the examinees sat to avoid any collaboration or illicit use of reference materials.

The pool of potential recruits into the administration was thus widened, but civil servants still received a very conservative education based on the Four Books and Five Classics of Confucianism and a selection of neo-Confucian works that expounded the virtues of loyalty to the emperor and adherence to Chinese tradition. Innovation was discouraged and bureaucrats became set in their ways. Those who were perceived as having stepped outside their brief were publicly flogged, sometimes to death.

This maltreatment of public servants was a sign of the cruel side of Hongwu's personality. He was also violently paranoid, and vicious in his suppression of dissent. In 1382, he established a secret police, the Embroidered Brocade Guard, whose 16,000 officers stamped out all signs of resistance. The Guard's reach and influence was wide, and as a result, until the very last years of its rule, the Ming dynasty experienced no significant rebellions by either the military or the aristocracy.

**International diplomacy**

The dynasty's self-confidence appeared to grow even further under Hongwu's successor, Yongle (reigned 1402–24), who moved the capital from Nanjing to Beijing, and embarked on an ambitious program of reconstruction and public works, including measures to improve the navigability of the Grand Canal. He also built the extravagant Forbidden City, which housed an imperial palace complex containing more than 9,000 rooms.

Yongle's initially aggressive foreign policy led to four campaigns against Mongolia and an attack on Annam (Vietnam) in 1417 that resulted in its incorporation into the Ming Empire. He also sought recognition from the rulers of faraway states: between 1405 and 1433, he launched six large-scale maritime expeditions to Southeast Asia, East Africa, and Arabia. Led by the great fleet admiral Zheng He, their purpose was to confirm...
China’s domination over the area by exacting tribute and other gestures of homage to the emperor.

The later Ming
However, the enormous cost of Zheng He’s ambitious ventures put great strain on the treasury, and to ensure they would never be repeated, all records relating to them were destroyed. Official ideology regarded China as the center of the world, and the later Ming saw no reason to encourage further maritime contact. The Chinese did not regard relations with foreign powers as possible on an equal basis: where diplomatic relations were conducted, the foreigners were considered (by the Ming, at least) as tributaries. The confidence and stability of the Ming bureaucracy also created a sense of self-sufficiency, with little use for external influences.

Ocean-going vessels were made to report all the cargo they landed, and private maritime trade was periodically banned (until it was legalized again in 1567 for all except trade with Japan). In Beijing, a shopkeeper’s unauthorized contact with foreigners could result in the confiscation of his stock.

Diplomatic isolation was reinforced by military uncertainty: Annam became independent once more in 1428, while huge resources were devoted to containing the threat posed by the Mongol tribes on China’s northern borders. In 1449, Emperor Zhengtong personally led a disastrous expedition against the Mongol leader Esen Khan in which the majority of the 500,000 Chinese soldiers died of hunger, were picked off by the enemy, or perished in a final battle as they retreated.

Extending the Great Wall
In the 1470s, the building of the final stages of the Great Wall—begun by the Qin dynasty in the 3rd century BCE—was not only a bid to prevent a similar disaster, but also to compensate for the Ming’s waning energy. Like their predecessors, they were unable to absorb the lands of the nomadic groups to the north of the border, or to send out expeditions that had any lasting effect on discouraging their raids. Therefore, a fixed, strongly garrisoned border defense was the best compromise.

During the 16th century, a succession of short-lived emperors who were dominated by their consorts, mothers, or by eunuch (castrated) advisers, was capped by the long reign of Wanli (1573–1620), who simply withdrew from public life entirely: for the last decades of his reign, he refused even to meet with his ministers. The dynasty began to decline: the machinery of government faltered and the army had little strength to respond to the serious threat posed by the Jurchen in Manchuria (now in northeast China). In 1619, this tribal people, who later renamed themselves Manchu, began to encroach on China’s northern borders.

Global trade
Economically, however, Ming China’s great productivity was a magnet for European maritime states seeking new commercial connections in East Asia, and in the early 16th century, European traders finally reached the coast of China. In 1514, a Portuguese fleet

On taking the throne, Hongwu issued his own traditional bronze coinage, although a shortage of metal led to the reinstatement of paper money, made of mulberry bark.

Hongwu’s final resting place, the Xiaoling Mausoleum, lies at the foot of the Purple Mountain in Nanjing, and is guarded by an avenue of stone statues of pairs of animals, including camels.
appeared off Canton (now Guangzhou) in the south, and by 1557, Portugal had established a permanent base at Macao. Spanish and Portuguese merchants (the former operating from Nagasaki in Japan and Manila in the Philippines)—and from 1601, the Dutch—secured an important share in trade with China. 

Even though Ming policy discouraged foreign maritime trade, individual Chinese merchants had participated actively in the revived economy. Before long there were flourishing Chinese colonies in Manila and on Java in Indonesia, near the Dutch-controlled trading city of Batavia, and Chinese merchants controlled a large share of local trade in Southeast Asia. The technical sophistication of the Chinese porcelain industry under the Ming led for the first time to the mass production of ceramics for export to European markets. 

The effects, though, of this growth in trade were not wholly positive: while a huge influx of silver from the Americas and Japan, used by the Europeans to pay for Chinese goods such as silk, lacquerware, and porcelain, stimulated economic growth, it also caused inflation.

**Technological change**

Ming China had inherited a legacy of scientific and technological innovation from the Song dynasty, which had left the country at the forefront of many scientific fields, including navigation and the military applications of gunpowder—a substance discovered during the Tang era whose use had spread to Europe from China in the 13th century. Under the Ming, though, the pace of progress slowed and by the later part of the dynasty, ideas had begun to flow in from Europe.

The Chinese military began to use artillery of European manufacture, and knowledge of European mathematics and astronomy was introduced to the country through Jesuit missionaries, including Matteo Ricci, who lived in Beijing from 1601 to 1610. He translated the ancient Greek mathematician Euclid’s *Geometry* into Chinese, as well as a treatise on the astrolabe (an astronomical instrument used for taking the altitude of the sun or stars). In 1626, the German Jesuit Johann Adam Schall von Bell wrote the first treatise in Chinese on the telescope, bringing Heliocentrism (an astronomical model in which the sun lies at the center of the universe) to a Chinese audience.

**The Ming collapse**

The late Ming began to suffer many of the same issues that had led to the fall of the Yuan. Crop failures reduced the productivity of China’s vast agriculture, and famines and floods led to widespread unrest in rural areas. The army’s pay began to fall into arrears, leading to discipline problems and desertions, while localized peasant uprisings coalesced into more general revolts. Meanwhile, on the northeastern frontier, the Manchus had built a state along Chinese lines at Mukden in Manchuria—calling their regime the Qing dynasty in 1636—and were now poised to take advantage of the Ming’s imminent collapse. They were aided in this by a revolt led by Li Zicheng, a rebel leader whose forces entered Beijing in 1644 unopposed, prompting the emperor to commit suicide. In desperation, the Ming military called on the Manchus for help. The tribesmen swept into the capital and drove out the rebels, but then seized the throne, and proclaimed the Qing dynasty in China.

**An enduring legacy**

Although the Ming had fallen victim to an agrarian crisis that coincided with renewed nomadic activity on its frontiers, this was a combination that had also brought down dynasties before it. The bureaucracy that had given China centuries of constancy and reduced the possibility, or even the need, for internal dissent, was slow to adapt itself to times of fast-moving crisis. Yet even so, the Ming era had brought great wealth and success to China. The population expanded from around 60 million at the start of its rule, to around three times that number by 1600. Much of this growth was centered in medium-sized market towns, rather than in large cities, and an increase in agricultural production led to the rise of an affluent merchant class in the provinces. Many of the elements of orderly government that Hongwu had inaugurated were carried over into the succeeding Qing dynasty, providing China with a degree of unity, stability, and prosperity that the European states of that period could only envy and admire.
At midnight on January 2, 1492, Abu ‘Abd Allah, the Muslim Emir of Granada, handed over the keys of his city to King Ferdinand and Queen Isabella, joint rulers of the Christian Spanish states of Aragón and Castile. This act marked the end of nearly 800 years of Muslim rule in the Iberian peninsula and the eclipse of a great civilization renowned for its architectural splendors and a rich tradition of scholarship. At the same time, it signaled the birth of a self-confident, united Spain that would soon divert its energies away from crusading against its Muslim neighbors, turning them instead towards building an overseas empire in the New World.

**Christian conquests**

Muslim Spain (or al-Andalus) dated from the Islamic conquest of the Visigothic kingdom in 711. Christian resistance survived in Asturias, in the far north, but it took centuries for the kingdoms of Castile, Aragón, León, and Navarre to gain the strength to push slowly southward into Muslim lands. This gradual reconquest, known as the Reconquista, gathered pace during the 11th century, when the Muslim regions broke up into numerous competing emirates ("taifas") and lost the strategically important city of Toledo in central Spain, in 1085.

The growth of the crusading spirit in western Europe also accelerated the progress of the Reconquista. Formal crusades against the Spanish Muslims (or Moors) were declared several times from the mid-14th century and a military culture emerged, in which raids into al-Andalus acquired the air of righteous expeditions. From

---

**IN CONTEXT**

**FOCUS**

**The Reconquista**

**BEFORE**

722 Pelagius defeats Muslims in Asturias, northern Spain.

1031 End of the centralized Umayyad caliphate of Córdoba. Muslim al-Andalus breaks up into several small emirates.

1212 Battle of Las Navas de Tolosa, in which the Christians defeat the Almohad caliph.

1248 Ferdinand III of Castile defeats Muslims at Seville.

**AFTER**

1492 Ferdinand and Isabella decree the expulsion of all Jews from Castile and Aragón.

1497 Spanish seize Melilla on the coast of North Africa.

1502 All remaining Muslims expelled from Spain.

1568–71 Muslim converts to Christianity rise up against repressive Christian rule in the Revolt of the Alpujarras.
The 12th century, military orders, such as Santiago and Alcántara, were founded. They frequently spearheaded independent thrusts into Muslim territory, amassing great wealth in the process, which enabled them to sustain extended campaigns and ransom Christians taken prisoner in the wars. They also repopulated land conquered from the Muslims with Christians.

The end of Muslim Spain
In Portugal, the Reconquista was completed with the conquest of the Algarve in 1249, while in Spain the Muslims clung on to power in the south. However, this was not to last. In 1474, Queen Isabella ascended to the throne of Castile, in northern Spain. Her husband Ferdinand was already king of the neighboring state of Aragón, and they resolved to permanently expel the Muslims from the south. The union of the two crowns enabled them to devote more resources to completing the Reconquista. It also put an end to centuries of Christian infighting, and this unity coincided with a period of Muslim division. From 1482, the monarchs undertook a series of military campaigns to conquer Granada—the last Muslim emirate in the Iberian peninsula. The cities were put under siege and fell one by one, until finally the major city of Granada surrendered in 1492.

Despite an agreement reached at the capitulation of Granada, which contained guarantees for freedom of worship, in 1502 the monarchs decreed that any Muslims over the age of 14 who refused to convert to Christianity must leave Spain within 11 weeks. This edict, combined with the expulsion of the large Jewish community in Granada 10 years earlier, left Spain a more homogeneous and less tolerant place, and the crusading impulse, now shorn of obvious targets, would have to find other channels.

Christopher Columbus’s expedition to the New World in 1492—the same year as the fall of Granada—provided the Spanish with just such an outlet, leading to their colonization of the Americas and Spain’s subsequent emergence as the first global superpower.
In 1443, the Korean court of King Sejong announced the creation of Han’gul, a national alphabet for the Korean language, and launched a program of publications in the new script. The measure was one of a number of strategies encouraged by Korea’s king that were designed to stabilize Korea and improve prosperity, and enabled his Chosön (or Yi) dynasty to survive for another 450 years.

**Rise of the Yi dynasty**
The Mongol Yuan dynasty had controlled the Korean Peninsula from the late 11th century until 1368, when it was overthrown by the Ming dynasty. Korea was left in chaos as its Koryö kings tried to reverse the effects of a century’s authoritarian domination. The redistribution of land and the sacking of pro-Mongol ministers led almost to civil war, but in 1392 Sejong’s grandfather Yi Sŏngyye, a former general, stepped in, deposed the last Koryö king, and assumed the throne as King T’aejo.

King T’aejo’s immediate priority was to secure stability, and the installation of a state ideology based on neo-Confucianism was key to achieving that. This ideology sought to re-establish proper relations between the ruler and his people, and conferred privileged status on a bureaucratic class that would act as guardian of the social hierarchy. Buddhism had been the dominant ideology under the Koryö dynasty, but T’aejo undermined its hold in the region by breaking up large estates controlled by Buddhist temples and redistributing the land, some to Confucian shrines.
Neo-Confucianism

The neo-Confucianism that became dominant in Korea under the Choson dynasty had evolved in China during the 11th and 12th centuries as a means to revive Confucianism, which had declined in favor of Taoism and Buddhism under the Tang and early Song. A more rationalist and secular form of Confucianism, the new philosophy rejected superstitious and mystical elements that had influenced Confucianism during and after the Han dynasty. Writers such as Confucian scholar Zhu Xi stressed the importance of morality, respect for social harmony, and education as means of understanding the Supreme Ultimate (tai qi), the underlying principle of the universe. In practice, however, neo-Confucian virtues such as loyalty, determination, and the belief that a supreme monarch should rule the state to parallel the Supreme Ultimate that governed the universe, tended to favor a hierarchical, bureaucratic state staffed by scholars who jealously maintained the status quo.

Neo-Confucianism emphasised the importance of education as a way of producing a class of literati capable of ensuring the harmonious running of the state. T’aejo’s grandson, King Sejong (reigned 1418–1450) raised this principle to new heights, founding in 1420 the Chiphyon-jon (Hall of Worthies), an elite group of 20 scholars tasked with research that would promote the better running of the kingdom.

Encouragement of wider literacy was an important neo-Confucian ideal, and T’aejo had already ordered the foundation of government-sponsored schools. At the time, however, Korean was written in Chinese characters, which were not well adapted to express the sounds of the language. Sejong himself is said to have developed the simplified script, the Han’gul, whose principles were explained in Proper Sounds for the Education of the People, a book published in 1445. Having only 28 characters—later reduced to 24—the script was far easier than Chinese was to learn, but its introduction faced bitter resistance from traditionalist nobles. They feared it might open civil service examinations to people from other social classes, which would risk diluting their power. As a result Han’gul faded from use, relegated as the “vulgar letters” of the lower orders, until its rediscovery in the 19th century, since when it has thrived as a vehicle for Korean nationalism.

The reforms of T’aejo and Sejong, however, broadly survived, creating a class of yangban—elite government officials dedicated to the perpetuation of the state. The yangban also acted as a break on any tendency to autocracy among the Yi monarchs, which helped the resulting dynasty to endure for more than five centuries.
THE ARAB ADVANCE IS HALTED AT TOURS
(732)

By the 8th century, the Islamic people of the Arabian peninsula had conquered much of North Africa and crossed into Europe, occupying Spain and moving into southern France. Their northward expansion seemed unstoppable—until 732, when they met combined Frankish and Burgundian troops at Tours. The Franks and Burgundians won the battle, and the Arab leader, Abdul Rahman Al Ghafiqi, was killed. Although there was another invasion in 735–39, the Arabs never got further than Tours. The Franks kept their power in Western Europe, Christianity was preserved as the continent’s dominant faith, and only Spain remained under Muslim rule.

ALFRED RULES WESSEX
(871–99)

Alfred was an able ruler and military leader who successfully defended his kingdom from Danish invaders. He expanded his territory from his base in Wessex (central southern England), uniting a large part of southern England under him. He built fortifications, founded a navy, encouraged education, and promoted Old English as a literary language via translations of Latin books. Alfred became known as “King of the English” and, although the Danes still held the northeast, is seen as the monarch who first embraced the idea of a united England with a distinctive culture based on Christianity and the English language.

THE SPREAD OF THE MISSISSIPPI CULTURE
(c.900)

There was a long tradition, lasting several millennia, of native North American groups based around large earth mounds that had been built for use in rituals or to house the dwellings of the ruling class. These communities were mostly confined to local areas, from Ohio to Mississippi, but the Mississippi culture spread widely through eastern North America. They grew maize intensively, worked copper, and developed hierarchical societies. Recognition of this complex culture has been a key element in debunking the idea that American Indian peoples were primitive and in forming a clearer understanding of their civilization.

THE GREAT SCHISM
(1054)

During the late centuries of the 1st millennium CE, the Eastern and Western parts of the Christian church had several disagreements about authority (with the pope claiming seniority over the Eastern patriarchs, but the latter disputing this), the wording of the Creed, and liturgical matters. These disputes came to a head in 1054, when Pope Leo IX and Patriarch Michael I excommunicated one another, creating a split called the Great Schism. This division between what are now the Catholic and Orthodox churches has never been healed.

THE NORMAN CONQUEST OF ENGLAND
(1066)

In 1066, the English king Edward the Confessor died childless, and a dispute arose over who should succeed him. One of the claimants to the throne was Duke William of Normandy, who invaded England, defeated the English at the Battle of Hastings, and was crowned king. This event forged a long-standing
link between England and mainland Europe, in which England’s rulers held French lands and spoke French. The Normans introduced a new ruling class, built castles and cathedrals, and transformed the English language with many new French-based words, all of which are legacies that still endure.

THE HUNDRED YEARS’ WAR (1337–1453)

The Hundred Years’ War was a series of conflicts fought between England and France that began when Edward III asserted his right to the French throne, a claim that the French Valois dynasty disputed. By the end of the war, English possessions in France had been reduced to the coastal town of Calais and its immediate environs. This result transformed England from a power that aspired to be part of a larger European empire to an island nation separate from Europe. France, inspired especially by the leadership of Joan of Arc, gained a stronger sense of national identity.

THE MONGOL INVASIONS OF JAPAN ARE REPULSED (1274, 1281)

In the late 13th century, the Mongols were at the height of their power under their leader Kublai Khan. From their base in central Asia, they had moved east to take control of China. In 1271, they sent troops by sea to conquer Japan. The attack was unsuccessful, in part because the Mongol ships were caught in a typhoon, referred to by the Japanese as a kamikaze (divine wind). The Mongol defeat was decisive in checking their advance and shaping the idea of a strong, independent Japan, free from outside intervention or influence. This concept of Japanese nationhood lasted for centuries.

SCOTLAND UPHOLDS INDEPENDENCE AT BANNOCKBURN (1314)

The Battle of Bannockburn, Scotland, was a major clash in an ongoing war between England and Scotland. Despite being vastly outnumbered, the Scots, under King Robert Bruce, inflicted a heavy defeat on the English and their ruler Edward II. This left Bruce in full control of Scotland, from where he continued to lead raids on northern England. The war went on for decades, and Scotland remained independent until 1707. The battle was such a sweeping victory that it is still remembered as a key event in Scottish history, symbolizing the independence from the rest of Britain to which many Scots still aspire.

THE CONQUESTS OF TAMERLANE (1370–1405)

Timur, also known as Tamerlane, was the last of the great nomadic Mongol conquerors. In an attempt to revive the great empire of Kublai Khan, he roamed widely across Europe and Asia, from northern India to Anatolia and Russia. By the end of the 14th century, he had conquered Persia, Iraq, Syria, Afghanistan, and eastern Russia, destroying Delhi in 1398, and pushing on toward China in 1405 but dying en route. His empire did not endure, and Mongol horse-based fighting techniques were no match for the firearms that increasingly drove warfare in the 15th century.

THE HUSSITE REVOLT (1415–34)

The Hussites, followers of the religious reformer Jan Hus, were precursors of the Protestants who lived in Bohemia (modern Czech Republic, then part of the Austrian Habsburg empire) and fought their Catholic rulers for the freedom to worship in their own way. Hus was executed for heresy in 1415, sparking a series of wars that eventually led to the defeat of the Hussites. The area remained under Catholic Hapsburg rule, but most of the people of Bohemia stayed true to their Protestant beliefs. Their revolt against their Catholic rulers in 1618 triggered the Thirty Years’ War, when the Bohemian Protestants were again defeated.
THE EARLY MODERN 1420–1795
Lyrera
The course of world events always looks different in retrospect from the way that it appears at the time, but the contrast in perspective is rarely as extreme as in the Early Modern Era, which spanned the 15th, 16th, and 17th centuries. Today, this period is often viewed as the age during which Europe climbed toward world domination, but to Europeans living at the time it often seemed to be full of unprecedented disasters. The unity of Christendom was split by the Reformation, and sectarian conflict between Catholics and Protestants, combined with power struggles between competing royal dynasties, made Europe a place of frequent warfare—a continent tearing itself apart. Meanwhile, the Muslim armies of the Ottoman Empire threatened the heartland of Europe, seizing the Byzantine city of Constantinople and twice penetrating as far as Vienna.

Yet historical retrospect certainly recognizes changes underway that were to make European nations the founders of the modern world. The flowering of arts and ideas in the Renaissance meant that Europe ceased to be a cultural backwater. Printing and paper, both originally invented in China, were used by Europeans to create mass-produced books that went on to revolutionize the dissemination of information. Gunpowder weapons, also invented by the Chinese, were deployed most effectively by European armies and navies. Above all, explorers and sailors from Europe’s western seaboard established oceanic trade routes that laid the foundations for the first global economy.

The start of colonialism
The importance of Christopher Columbus’s transatlantic voyage in 1492 cannot be exaggerated. It established a permanent link between two entire ecosystems that had evolved in isolation from each another for almost 10,000 years. The initial impact on the inhabitants of the Americas was catastrophic. Eurasian diseases and the infamous brutality of the Spanish conquistadors decimated the population. A remarkably small number of European invaders conquered the most sophisticated American states with startling ease, laying potentially the entire New World open to European exploitation and colonization.

However, the arrival of European sailors in Asia did not have the same dramatic impact. Powerful

The Ottoman Turks conquer Constantinople, marking the end of the Eastern Roman Empire and creating a new Muslim capital.

Spain and Portugal sign the Treaty of Tordesillas, dividing the newly conquered lands in the Americas between them.

Abu Akbar becomes ruler of the Mughal Empire in India; Persian and Indian art forms merge to create a unique style.

Religious tensions between Protestants and Catholics come to a head at the Defenestration of Prague, leading to the Thirty Years’ War.

Brunelleschi designs the groundbreaking dome of Florence cathedral, signaling the beginning of the Renaissance.

Christopher Columbus reaches America, starting an era of European trade and colonization, and transforming the ecology of the Americas.

Martin Luther writes 95 theses against the Catholic Church, leading to the Reformation and the rise of Protestantism.
English religious separatists (pilgrims) set sail in the *Mayflower* to seek a new life; they found a colony in North America.

The Royal African Company is established in England; slaves are taken from the West African coast for sale in the Americas.

Tsar Peter the Great founds *St Petersburg* on the Baltic coast to encourage trade and modernize Russia along European lines.

The Battle of Quebec ends French rule in Canada; it was part of the Seven Years’ War, which involved most major European nations.

**Economic growth**

From the second half of the 17th century, signs of economic growth accelerated in Europe. Productivity of labor in trades and agriculture increased notably in areas like the Dutch Netherlands. New financial institutions, such as central banks and joint stock companies, laid the foundations of modern capitalism. Complex patterns of maritime trade linked European colonies in the Americas to Europe, Africa, and Asia. Slaves, mostly bought by European traders in West Africa, were transported in vast numbers to work on colonial plantations, so that in some parts of the New World people of African descent greatly outnumbered both Europeans and the native population. At home, Europeans consumed luxury goods from China and India, and products such as sugar and coffee from plantations in the Caribbean and Brazil. North America, the West Indies, and India were all regions of colonial contention—the precipitous decline of the Mughal Empire having opened up parts of India to European territorial conquest.

**Intellectual movements**

Even at this stage, the degree of European ascendancy should not be exaggerated. China had gone through difficult times in the mid-17th century transition from the Ming to the Qing dynasty, but in the 18th century, imperial China was enjoying a golden age of power and prosperity. The population of Europe had begun a steep increase to unprecedented levels—a result of improved food production and declining epidemic diseases—but China also experienced rapid population growth.

What really marked out Europe as unique at this time was the development of knowledge and thought. The 17th-century scientific revolution began a transformation of our understanding of the universe. The rationalist movement known as the Enlightenment challenged all preconceptions, traditions, and conventions. The modern world was under construction in the European mind.
In 1453, the Ottoman Turks attacked and took the city of Constantinople, the capital of the Byzantine Empire. The loss of this millennium-old Christian empire, which had once stretched virtually all the way around the Mediterranean, was a profound shock to the Christian world. As if to symbolize the Muslim victory, Sancta Sophia, one of the greatest cathedrals in Christendom, was converted into a mosque.

The Ottoman Turks had already conquered much of the surrounding territory before Sultan Mehmet II (1432–1481) laid siege to the city and bombarded it with heavy artillery. Having breached its walls, his army of more than 80,000 men then overwhelmed the small force.
inside. Constantine XI, the last Byzantine emperor, was killed, and with the fall of the city, his empire ended. Constantinople then became the capital of the Ottoman Empire, which lasted until 1922.

**A weakening empire**
The Byzantine Empire was already in terminal decline by the time Constantinople was taken. It had shrunk to include only the capital city, some land to its west, and the southern part of Greece. The decline began at the Battle of Manzikert (1071), during which the army of the Turkish Seljuk dynasty drove the Byzantines out of their crucial territory in Anatolia. From this point, rival claims for the Byzantine crown, disputes over tax, loss of trade revenue, and poor military leadership all contributed to the contraction of the empire.

In 1203, the Fourth Crusade—a western European expedition originally intended to conquer Jerusalem—became entangled in the empire's politics. Some of the crusade leaders pledged to help restore the deposed Byzantine Emperor Isaac II Angelos in return for support for their expedition. They were initially successful: Angelos' son was crowned as co-emperor but, in 1204, he in turn was deposed by a popular uprising. The Byzantine senate elected a young noble, Nicolas Canabus, as emperor, and he refused to back the crusaders. Denied their promised payments, the crusaders and their allies, the Venetians, responded with a ruthless attack on the city. They raped and killed civilians, looted churches, and demolished priceless works of art. Constantinople was all but destroyed.

**Rise of the Ottomans**
Before capturing Constantinople, the Ottoman Empire had already expanded from Anatolia into the Balkans. Afterward, in the 16th century, it expanded into the eastern Mediterranean, along the banks of the Red Sea, and into North Africa. The defeat of the Mamelukes in Egypt in 1536, and

**When lighted tapers were** put to the “innumerable machines” ranged along a four-mile section of the city walls, the world's first concerted artillery barrage exploded into life.

Wars against the Safavids, one of Persia's most significant ruling dynasties, gave the Ottomans control of a whole swathe of the Arab Middle East.

The Ottoman Empire was a Muslim State and the sultans saw it as their duty to promote the spread of Islam. Nevertheless it tolerated Christians and Jews in a subsidiary status and made extensive use of slaves. Many languages were spoken and faiths followed within its domains, but it dealt with the potentially conflicting religious and political differences by setting up vassal (subordinate) states in some regions. Territories such as Transylvania and the Crimea paid tribute (made regular payments) to the emperor, but they were not...
ruled by him directly, and acted as buffer zones between Muslim and Christian areas. Some vassal states, including Bulgaria, Serbia, and Bosnia, were eventually absorbed into the larger empire; others retained their vassal status.

**Government and military**

The Ottomans evolved a strong system of government that combined local administration with central control. The sultan—whose brothers were customarily murdered at his accession—was supreme ruler. He had a council of advisers, later a deputy, who ruled on his behalf. Local areas were ruled by military governors (beys) under the emperor’s overall control, but local councils kept the beys’ authority in check.

Non-Muslim communities within the empire were allowed a degree of self-rule through a system of separate courts called millets. The millets allowed Armenian, Jewish, and Orthodox Christian communities to rule according to their own laws in cases that did not involve Muslims. This balanced combination of central and local control enabled the Ottomans to hold together a large and diverse empire for much longer than would have been possible with a more wholly centralized system.

The Ottoman army was also crucial to the empire’s success. It was technically advanced—employing cannon from the siege of Constantinople onward—and tactically sophisticated. Its high-speed cavalry units could turn what looked like a retreat into a devastatingly effective flanking attack, surrounding the enemy in a crescent-shaped formation that would take them by surprise.

At the heart of the army were the Janissaries, a unit of infantry that began as the imperial guard and expanded to become the most feared elite force of the period. Initially, the unit was made up of men who, as children, had been abducted from Christian families in the Balkans. Under the *devşirme* system, which was also known as the “blood tax” or “tribute in blood,” boys aged from eight to 18 were taken by Ottoman military, forcibly converted to Islam, and sent to live with Turkish families, where they learned the Turkish language and customs. They were then given rigorous military training, and any who showed particular talent were selected for specialized roles ranging from archers to engineers.

### Mehmet II

Mehmet (1432–1481), the son of the Ottoman emperor Murad II, was born in Edirne, Turkey. As was usual for an heir to the Ottoman throne, Mehmet had an Islamic education, and at 11 years old was appointed governor of a province, Amasya, to gain experience of leadership. A year later, Murad abdicated in favor of his son, but shortly afterward was called back from his retirement in Anatolia to lend military support. “If you are the Sultan,” Mehmet wrote, “come and lead your armies. If I am the Sultan, I order you to come and lead my armies.”

Mehmet’s second, main, rule was from 1451 to 1481. His victory at Constantinople was followed by a string of further conquests: the Morea (southern Greece), Serbia, the coast of the Black Sea, Wallachia, Bosnia, and part of the Crimea. He rebuilt Constantinople as his capital and founded mosques there, while also allowing Christians and Jews to worship freely. Known for his ruthless military leadership, he also welcomed humanists to the capital, encouraged culture, and founded a university.
Naturalistic motifs in cobalt blues and chrome greens surround Islamic calligraphy in these Iznik wall tiles, commissioned for the Topkapi Palace during the classical age of Turkish art.

Janissaries were not permitted to marry until they retired from active duty, but they received special benefits and privileges designed to secure their sole allegiance to the ruler. Although they made up only a small proportion in the Ottoman army, they had a leading role and played a key part in many victories, including those over the Egyptians, Hungarians, and Constantinople.

The Ottoman heyday
The empire reached its peak under Emperor Suleiman the Magnificent. He forged an alliance with the French against the Habsburg rulers of the Holy Roman Empire, and signed a treaty with the Safavid rulers of Persia that divided Armenia and Georgia between the two powers and put most of Iraq into Ottoman hands. Suleiman conquered much of Hungary, and even laid siege to Vienna, although he did not succeed in taking it.

The Ottomans took their Islamic faith to their territories, building mosques everywhere—and with the mosques came scholarship and education. Ottoman cities were impressive. Constantinople itself was virtually rebuilt: the Ottomans reinforced its fortifications as well as adding many mosques, bazaars, and water fountains. The city’s dazzling centerpiece was the royal palace of Topkapi, commissioned by Sultan Mehmet II in around the 1460s. Masons, stonecutters, and carpenters were summoned from far and wide to ensure the complex would be an enduring monument. It contained mosques, a hospital, bakeries, and a mint among much else, and attached to it were imperial societies of artists and craftsmen who produced some of the finest work in the empire.

Gradual decline
This cultural flowering continued after Suleiman’s death, but the empire faced serious challenges in other arenas. A rising population was putting pressure on available land; there were military threats and internal revolts; and defeat by a coalition of Catholic forces at the sea battle of Lepanto in 1571 prevented the empire’s expansion further along the European side of the Mediterranean.

The Ottoman empire steadily lost prestige and influence until its decline earned it the title “the sick man of Europe.” Incapable of responding to the convulsions of the 19th century, it lost territory and struggled against a rising tide of nationalism among its conquered peoples. Its long history finally ended with defeat in World War I and the foundation of the modern Turkish state by Kemal Attatürk.
FOLLOWING THE LIGHT OF THE SUN
WE LEFT THE OLD WORLD

CHRISTOPHER COLUMBUS REACHES AMERICA (1492)
Christopher Columbus continued to explore the Caribbean, visiting Cuba, Hispaniola, and several of the smaller islands. He met with a mostly peaceful response from the native people, whom he observed might make good servants or slaves. He also noticed their gold jewelry, and took a sample of local gold, as well as some native prisoners, back to Europe.

Europeans develop a taste for Asian spices and luxury goods. Land routes to Asia are hazardous and blocked by the Ottoman Empire. The Portuguese explore Indian Ocean routes. The Spanish Crown supports the exploration of a potential route to Asia across the Atlantic Ocean. Columbus sets sail westward across the Atlantic to Asia, but instead reaches America.

Motivation to explore
The rulers and merchants of Western Europe wanted to explore the Atlantic for primarily economic reasons. Spices that would not grow in Europe’s climate, such as cinnamon, cloves, ginger, nutmeg, and pepper, were prized not only for their taste but also because they could help to preserve foods. There was also an enthusiastic market for luxury goods such as silk and precious stones, commodities that came primarily from the islands of the Indonesian group, such as the Moluccas, which were known in Europe as the Spice Islands.

Bringing such commodities across Asia by land was difficult and dangerous because of local wars and instabilities along the route; it was also costly, since during their journey goods would pass through many different merchants’ hands. There were certainly excellent economic reasons to develop sea routes: anyone who could find a more direct way of importing these goods to Western Europe would become very rich.
Another reason why Europeans started to explore sea routes in the late Middle Ages was to investigate the possibility of establishing European colonies in Asia. These could act not only as trading posts, but also as bases for missionaries, who could convert the locals to Christianity. This they believed would help to reduce the perceived threat of Islam.

By the 14th and 15th centuries, the Spanish, Portuguese, English, and Dutch had developed ocean-going ships, and trained sailors who could navigate over long distances. Explorers used various types of vessels, among the most successful of which was the caravel—a fast, lightweight, and extremely maneuverable ship that was usually equipped with a mix of square and lateen (triangular) sails. The lateen sails made it possible to sail to windward (into the wind), which allowed explorers to make progress even in variable wind conditions. Explorers also used the carrack, or nau, a larger vessel that was similarly rigged. On his first transatlantic voyage, Columbus took two caravels, each probably of 50–70 tons, and one carrack of about 100 tons, the extra capacity being useful for carrying stores.

Skills and technology quickly developed in both shipbuilding and navigation. Sailors used the cross-staff—a basic sighting device—or later a mariner’s astrolabe, to calculate a vessel’s latitude. They achieved this by measuring angles, such as the angle of the sun to the horizon. They used a magnetic compass to gauge direction, and their charts and knowledge of prevailing winds and currents improved with each voyage.

**Portuguese navigators**

European navigators had been striking out into the Atlantic for many decades. Sailors from Bristol, England, for example, were sailing in the 1470s in search of a mythical island called “Brasil,” thought to be west of Ireland. The Portuguese established trading colonies on Madeira, and Prince Henry the Navigator, son of Portugal’s King John I, commissioned numerous journeys of exploration to the Azores in the 15th century. Henry had started the first school for oceanic navigation, with an astronomical observatory at Sagres, Portugal in about 1418. Here he promoted the study of navigation, map-making, and science. Henry sent ships down the west coast of Africa, to which he was particularly attracted by the potential to trade in slaves and gold. His ships pushed southward, setting up trading posts along the coast.
way. Subsequent rulers continued to sponsor voyages and, in 1488, Portuguese captain Bartolomeu Dias rounded the southern tip of Africa. Soon another Portuguese navigator, Vasco da Gama, led the push to round the Cape and pressed on across the Indian Ocean, linking Europe and Asia for the first time by ocean route.

Since Portugal dominated the sea route along the African coast, Portugal’s European neighbor and rival Spain needed to find an alternative route, if it was to gain access to the riches of the East. Although educated people knew by this time that the Earth was round, they did not know about the existence of the Americas. An alternative way to the East seemed, therefore, to be to sail west across the Atlantic. This route seemed especially attractive to the many seamen—including Christopher Columbus—who believed the planet’s diameter to be rather smaller than it actually is.

**Seeking sponsorship**
In 1485, Columbus presented to John II, king of Portugal, a plan to sail across the Atlantic to the Spice Islands. John refused to invest in the scheme, however. This was partly because Portugal was already exploring the West African coast with some success, and partly because the experts John consulted about the proposal were skeptical about the distances involved.

Columbus cast his net more widely, seeking backing from the powerful maritime cities of Genoa and Venice, and sending his brother to England to do the same—but still he received no encouragement. He therefore turned to Ferdinand of Aragon and Isabella of Castile, the “Catholic Monarchs” who jointly ruled Spain. At first they turned him down, their navigational consultants also skeptical about the length of his proposed route, but eventually,

**Columbus’s voyage** was a bold undertaking. Despite a general understanding that the world was spherical, many believed the westward journey was doomed to fail, fearing the crew would die of thirst before ever reaching land.

---

**Provisions on board**
- The ships included vinegar, olive oil, wine, salted flour, biscuits, dry legumes, and salted sardines.

**Columbus calculated** that Asia was 2,400 miles away from Spain. In fact it is around 12,200 miles away.

**On August 3rd, 1492**, Columbus departed Spain with three ships: the Niña, Pinta, and Santa Maria.

**The voyage** to America and back lasted seven months, from August 3rd, 1492—March 15th 1493.

**The crew** consisted of 87 men—20 on the Niña, 26 on the Pinta, and 41 on the Santa Maria.

**On October 12th, 1492**, the ships finally reached the Bahamas.

---

_Bartolome De Las Casas_  
_Spanish historian (c.1527)_

Such inhumanities and Barbarisms were committed... acts so foreign to human nature that I now tremble as I write.
after protracted negotiations, they agreed to sponsor the voyage. Securing a new trade route would certainly bring material rewards, but Isabella also saw the voyage in terms of a religious mission that could bring the light of Christianity to the East.

**Columbus sails west**
Having been granted viceroyship and governorship of any lands he could claim for Spain, plus other benefits including 10 percent of any revenues they yielded, Columbus set sail westward in 1492. He called at Gran Canaria before sailing west, sighting land five weeks later. In early 1493 he returned to Europe with two ships, the third having been wrecked off the coast of present-day Haiti, and was duly appointed Governor of the Indies.

Columbus’s second expedition was organized just a few months later. This involved 17 ships loaded with some 1,200 people who would found Spanish colonies in the Caribbean. As well as farmers and soldiers, the colonists included priests, who were specifically charged with converting local people to Christianity. Religious conversion became a key part of European colonization, illustrating the colonist’s ambition to impose their own culture and exert control over newly colonized peoples. Columbus’s achievement in 1492 is often described as the European “discovery” of America. This is a problematic claim not only because Columbus thought he had reached Asia, but also because Vikings from Scandinavia had reached North America some 500 years earlier—archaeological remains at L’Anse aux Meadows in Newfoundland reveal that they even settled there. However, the Viking settlement was not long-lived, and was unknown to Columbus and his contemporaries.

Nevertheless, Columbus’s 1492 journey did inaugurate a lasting contact between the Americas and Europe. The pitiless destruction he and his men wrought upon the indigenous peoples of the West Indies, whom he encountered when he first arrived in the Americas, also began a process of decimation of American Indian populations that would continue for a century.
Spain and Portugal signed a treaty on June 7, 1494, at Tordesillas in Spain, that resolved the countries’ disputes about the possession of newly discovered territory. The rulers settled on a meridian 370 leagues west of the Cape Verde Islands as a line of demarcation. All the lands to the west of this line would belong to Spain; all those to the east would belong to Portugal. The line was chosen because of its location: it lies roughly halfway between the Cape Verde Islands, which already belonged to Portugal, and the Caribbean islands, which Christopher Columbus had claimed for Spain in 1492.
By the 1490s both countries were discovering substantial territories, including lands in the New World, although at this point the size and extent of the Americas was unclear to Europeans. In spite of the fact that the Spanish Crown had funded Columbus’s voyages, Spain’s claim to his discoveries was not clear-cut. The 1479 Alcaçovas treaty between the Catholic Monarchs of Spain and the rulers of Portugal gave all newly discovered lands south of the Canary Islands to Portugal. When Columbus landed at Lisbon after his first voyage, he told John II, king of Portugal, that he was claiming Hispaniola and Cuba for his Spanish backers. John wrote to Spain’s rulers immediately to say that he was preparing to send his own ships to claim the Caribbean for Portugal.

**Legalizing possession**

To prevent such disputes erupting each time a navigator made a fresh discovery, the leaders of both countries decided to review the terms of the Alcaçovas treaty. The papacy had been involved in the 1479 treaty, and now Pope Alexander VI (a Spaniard) proposed a combined north–south and east–west dividing line, suggesting that any lands west and south of a line 100 leagues west and south of the Azores and Cape Verde Islands be allocated to Spain. John rejected the proposition, considering it to be biased in favor of his rivals, and eventually all parties agreed on the meridian between the Cape Verde Islands and the Caribbean. The resulting treaty set the agenda for future colonization, and influenced the fate of vast swathes of the world.

**The Treaty of Tordesillas resolves territorial conflicts between Spain and Portugal.**

By the time the Tordesillas treaty was signed, Portugal had already made headway in exploring Africa and southern Asia. Working south from a North African base at Ceuta, explorers established a series of trading posts on the West African coast, gradually pushing south until, in 1498, Vasco da Gama rounded the Cape of Good Hope and sailed into the Indian Ocean. In the 16th century, Portugal had settlements in India, the Moluccas, Sumatra, Burma, and Thailand, and by 1557 they had established their long-standing enclave in Macau, which became a hub for their trade with many Asian communities.

The treaty line passed through South America, allocating a northwestern portion to the Portuguese. In 1500, explorer Pedro Álvares Cabral landed on the coast of Brazil and claimed it for Portugal. The conquistadors exploited their new colony, forcing indigenous peoples to cultivate sugar cane, and later to grow coffee, and mine gold. The laborers died in huge numbers, both from diseases introduced by
the colonists, and as a result of their ruthless treatment, and slaves were brought in from Africa to replace them. Brazil, ruled from the mid-16th century by Portuguese governors-general, remained a colony until the early 19th century.

The Spanish in America
Following Columbus’s transatlantic voyages and the settlement of the treaty, Spain turned increasingly to America, sponsoring expeditions that combined exploration with conquest and colonization. The first of these, led by Hernán Cortés, was to Mexico, which was then home to the small but rich Aztec Empire. The empire’s large, central capital was at Tenochtitlan (modern Mexico City). With just a small force of about 600 men, Cortés overthrew the million-strong empire, eventually killing its ruler, Moctezuma. Another Spanish leader, Francisco Pizarro, conquered the Inca Empire, which centered on Peru but also included Chile, Ecuador, and large parts of Bolivia and northwestern Argentina. Again with just a small force (180 men), Pizarro laid the foundations of another Spanish stronghold and source of great wealth in precious metals. Peruvian silver became the main source of Spain’s income from its colonies.

The siege of Tenochtitlan, the Aztec capital, was decisive in the Spanish conquest of Mexico, and brought the Spaniards a step closer to their goal of colonizing the Americas. Several factors contributed to Cortés’ and Pizarro’s astounding conquests. The Aztecs were overwhelmed by a kind of battle unknown to them, involving firearms and the single-minded slaughter of opponents—Aztec practice was to capture prisoners, whom they would later kill in ritual sacrifice. The Spanish were also helped by alliances they made with local peoples who were hostile to the Aztecs. The result for Spain was a flow of wealth across the Atlantic and a secure base for building on their involvement in the Americas. Further Spanish colonization followed, including that of Colombia, known to the Spanish as New Granada. By the end of the 17th century, much of western and central South America was in Spanish hands. Conquered areas, and the people who lived in them, were parceled out to the Spanish conquerors, who
undertook to convert the locals to Christianity. They did convert them, but they also made them perform forced labor, especially in the silver mines. Laborers fell victim to disease and exploitation—like their counterparts in Brazil, but on a lesser scale—and slaves from Africa were brought in to supplement their numbers.

The Spanish Crown tried to control this large empire, appointing viceroyos to rule over the settlers and the native American peoples, and taking a fifth of the profits from silver mining. Settlers increasingly resisted this external interference, however, and by the 19th century the empire was diminishing as areas from Colombia to Chile won their independence.

**Circumnavigation**

The Treaty of Tordesillas set the seal of approval on Spain’s activity in America, but this deterred neither Spain nor Portugal from looking for a westward route to eastern Asia, a potential source of spices, luxury goods, and great wealth for traders from Europe. Amerigo Vespucci, an Italian navigator working for the Portuguese Crown, was one of the first to take this exploration further. He explored the coast of South America, and is remembered because America is named after him. The Portuguese navigator Ferdinand Magellan was next to explore this route, this time on behalf of Spain. He believed that the Spice Islands could be less than halfway around the world when sailing west from the treaty line, which would give Spain a claim to them. In 1519 he set out with five ships in an ambitious attempt to make the first circumnavigation of the globe. Although Magellan himself died en route, some of the expedition survivors completed the voyage, giving Spain a basis for its claim to land in Southeast Asia.

In 1529 the rival Crowns signed another treaty at Zaragoza. This agreement assigned the Philippines to Spain and the Moluccas to Portugal.

**The treaty’s heritage**

European countries not party to the Tordesillas agreement simply ignored it, and soon began to move in to develop their own empires. Britain colonized North America, for example, the Dutch moved into the Spice Islands, and several European countries set up colonies in the Caribbean. The treaty did, however, influence a significant proportion of the world. It underlined a development that was already beginning in Europe in which wealth and influence were passing from the old central European powers (based in the Holy Roman Empire) to the coastal, maritime powers that looked to build empires in new territories. These empires brought both Spain and Portugal enormous riches, and their overseas empires left a significant cultural legacy: much of South and Central America is Spanish-speaking, and there is a major Portuguese heritage in parts of Africa and Asia, the greatest of all being in Brazil.

**Ferdinand Magellan**

Born into a noble Portuguese family, Magellan (1480–1521) was orphaned as a boy, and sent to the Portuguese royal court to act as page.

As a young man, he became a naval officer. He served in Portugal’s colonies in India and took part in the conquest of the Moluccas, but after a disagreement with the Portuguese king, he went to Spain to look for support for his venture westward. By 1518 he had the backing of the Spanish king Charles I, and set off the following year with five ships.

After losing one ship to the weather and another to a desertion, Magellan navigated the narrow sea route (named the Strait of Magellan in his honor) between what is now mainland South America and Tierra del Fuego. He emerged in an ocean he named Pacific, because of its calmness. He crossed this expanse of water, stopping at Guam, and then in the Philippines, where he was killed. Only one ship, under Juan Sebastien del Cano, made it back to Europe in 1522, having achieved the first circumnavigation of the globe.
In 1418, the wealthy Guild of Wool Merchants of Florence launched a competition to find a design for a dome to complete their unfinished cathedral—the Cattedrale di Santa Maria del Fiore, commonly known as Il Duomo. The city of Florence was one of the richest in Italy, a center of banking and trade and it was on the basis of this wealth that the city could afford to commission a cathedral dome of unprecedented size.

This lavish spending on art and architecture would soon be echoed across Italy, as the region’s growing prosperity meant that rulers and rich citizens could spend money to beautify their towns and enhance...
Il Duomo
At the time of the competition, Florence’s cathedral featured a vast octagonal space toward its eastern end, but since work on the building began in 1296 no one had worked out how to make a dome to cover it. The dome would have to be the largest cupola constructed since the late Roman period and the guild specified that it should be built without external buttresses, favored by their political rivals in France, Germany, and Milan and also considered old-fashioned. This seemed an impossible task. The young goldsmith and clockmaker-turned-architect Filippo Brunelleschi won the competition with his daring plan for a huge eight-sided brick dome, but many doubted that he would be able to construct it.

The main problem was being able to support the structure in such a way that it did not spread and collapse under its own weight. Brunelleschi’s ingenious solution was to construct two concentric domes—an inner supporting dome and a larger outer one. The domes were then joined together with huge brick arches and a complex interlocking system of “chains” made from rings of stone and wooden beams that were attached by iron clamps to prevent the dome from expanding outwards. The result—which was finally completed in 1436—remains the largest masonry dome in the world. Combining the style of antiquity with new engineering techniques, it exhibited the blend of ancient wisdom and modern knowledge that typified the Renaissance.

Dominating the skyline of Florence, Brunelleschi’s groundbreaking dome remains the tallest building in the city, rising majestically from the surrounding red-tiled roofs at 374 ft (114 m) high.

The Renaissance in Italy
Meaning “rebirth,” the Renaissance was a movement that started in Italy and began to spread across Europe from the mid-14th century. Its roots lay in the rediscovery of the culture of ancient Greece and Rome and it influenced all the arts, as well as science and scholarship. Painters, sculptors, and architects broke free from the traditions of medieval art. They visited the monuments of ancient Rome, looking at classical statues and the carvings on Roman buildings, and created works of art in the classical style. This new movement inspired architects, such as Leon Battista Alberti and Brunelleschi, and a wave of great artists, including Michelangelo and Leonardo da Vinci. Most of these figures were active in many fields—Brunelleschi was a sculptor and engineer as well as an architect; Michelangelo painted, sculpted, and wrote poetry; while da Vinci’s achievements spanned both the arts and the sciences.

"This enormous construction towering above the skies, vast enough to cover the entire population of Tuscany with its shadow.

Leon Battista Alberti
On Painting and Sculpture (1435)"

their prestige. The strong economy and deep civic pride in Italy laid the foundations for one of the most significant intellectual movements in history: the Renaissance.
Michelangelo’s painted ceiling at the Sistine Chapel in the Vatican combines the Renaissance interest in physical beauty and realism with religious subject matter.

Renaissance painters and sculptors sought to represent the physical world in a more realistic way than their Medieval predecessors: they valued anatomical accuracy and developed scientific methods of illustrating perspective. As in classical art, there was more focus on human beauty and the nude.

There was also a revival of interest in classical learning, which was influenced by Greek scholars from the Byzantine Empire, who settled in Italy when Constantinople (the empire’s capital) fell in 1453. The émigrés brought with them ancient Greek literary, historical, and philosophical texts, which had been lost to the West, and taught the Italians Greek so they could read and translate the works. This led to the emergence of Renaissance Humanism in Italy, which involved studying the humanities—grammar, rhetoric, history, philosophy, and poetry—and, more broadly, a high regard for the dignity and potential of the human race.

At the time of the Renaissance, life, business, and politics in Italy were dominated by a number of powerful city-states—mainly Florence, Milan, Ferrara, and Venice—together with Rome, from where the pope could exercise great secular (“temporal”) power as well as being the spiritual head of the Catholic Church. The city-states generated a lot of wealth from trade and—as in the case of Florence—banking. Their ruling families, such as the Gonzaga in...
Mantua, the d'Este in Ferrara, the Sforza in Milan, and the Medici in Florence, spent lavishly on palaces, churches, and works of art, and became patrons of many great Renaissance artists. These wealthy families also encouraged the revival of classical learning by employing scholars as tutors for their children. In addition, several members of the Medici family became popes.

Spread of the Renaissance
From the end of the 15th century, the Renaissance spread from Italy to other parts of Europe and a Northern Renaissance emerged. Northern countries, particularly the Netherlands and Germany, produced their own great artists, such as Albrecht Dürer (1471–1528) and Hans Holbein the Younger (1497–1543)—both gifted realists. Renaissance Humanism also spread northward, but northern writers and philosophers, most notably Erasmus of Rotterdam (1466–1536), tended to place more emphasis on Christianity, education, and reform than their Italian counterparts.

The invention of printing using movable type by Johannes Gutenberg in Germany in the 1430s enabled Renaissance ideas to spread even more quickly. Before Gutenberg, the only way printed text was possible was for each page to be carved by hand into a block of wood, but as this was so laborious books were invariably written out by hand. Gutenberg’s method involved arranging individual metal letters and punctuation symbols in lines and pages; when many copies of a page had been printed, the type could be taken apart and reused. He combined this new idea with the existing technology of paper-making and the kind of press used in wine production, and the result was the printing of multiple copies of books for the first time.

Gutenberg’s invention had a major impact. It meant that books, which had previously been costly and took months to produce, were now easily available and much more affordable, so ideas and information could circulate quickly and reach more people. While the church had used mostly Latin as its universal language, writers now wrote in their local tongues, and as a result literature in French, English, German, and other languages flourished. In addition, copies of the ancient classics were reproduced in quantity, thus helping to spread ideas that were central to both the Renaissance and Humanism.

The Renaissance's impact
By the mid-16th century, the influence of the Renaissance was waning in southern Europe, but it lasted slightly longer in the north. However, many great Renaissance works endured and they continued to inspire future generations of painters and architects. Indeed, the longstanding popularity of oil paintings and classical style of architecture, and the rise of Humanism, would all have been impossible without the movement that began with Brunelleschi in Florence in the 15th century.
In July 1453, John Talbot, Earl of Shrewsbury, marched out of Bordeaux with some 6,000 men towards the English-held town of Castillon, which the French were preparing to besiege. The French had constructed a fortified camp big enough to contain 10,000 men, and were armed with some 300 guns under the command of artillery expert Jean Bureau. Expecting reinforcements, Talbot signaled an attack but as the English approached, they found themselves outnumbered by a well-prepared army. The French artillery...
fired, their bowmen followed suit, and the English were mowed down en masse. It was the first field battle in European history to be decided by gunpowder.

**Hundred Years’ War ends**

The Battle of Castillon was the climax of the Hundred Years’ War, fought since 1337 by England and France, countries that had long been closely linked by their ruling families. By the time of Castillon, great changes had taken place in the fabric of European life, which profoundly altered the armies with which the French and English monarchs fought.

The Europe of the 15th century was principally a money economy, and everyone, including soldiers, expected to be paid. Kings were thus increasingly reliant on mercenaries who fought for pay. This was a sharp contrast to the feudal system that had existed previously, in which fighting men were provided by the nobility in exchange for land. Eventually, rulers began employing mercenaries on a permanent basis: a standing army. But it wasn’t until the later 17th century that this model became the norm.

---

**Cannons and guns**

The kings who fought for control of France relied increasingly on large armies and expensive artillery. Cannons, like those that secured the French victory at Castillon, transformed warfare. The stout walls of medieval castles provided little defense against a cannonball. To better resist artillery rulers began, from the 16th century, to build a new type of fortification, the star fort. These forts had walls sunk into ditches to strengthen them against direct fire and also used cannons themselves in an active defense.

At the same time, hand firearms that fired projectiles that smashed through the armor of mounted knights and required little skill to wield, gradually replaced the bow. Drilled infantry—wielding pikes and firearms—replaced massed ranks of archers, and formed the core of the new line of battle.

To pay for their new armies, rulers steadily began to centralize their domains. More efficient taxation systems and bureaucracies were established, curbing the power of an aristocracy whose influence was already diminished by the decline of the feudal system.

Victory at Castillon, guaranteed by gunpowder, ensured the survival of an independent France that was becoming more like a centralized state and less like a feudal country. As a result of the French triumph, France was able to consolidate the territory under its control and the map of this part of western Europe began to take on its modern form.

England, bereft of its European possessions, also became more centralized, and its rulers turned away from continental Europe, leveraging the country’s resources to begin maritime exploration of the Atlantic and North America.

*There is no wall, whatever its thickness that, artillery will not destroy in only a few days.*

* Machiavelli, 1519
AS DIFFERENT FROM OURS AS DAY AND NIGHT
THE COLUMBIAN EXCHANGE (1492 ONWARDS)

The arrival in the 1490s of the first Europeans in North and Central America reconnected ecosystems that had developed in isolation from one another for thousands of years. In the so-called Columbian Exchange, lives and economies that had altered only gradually over centuries were suddenly transformed by the influx of new crops, animals, technology, and pathogens. Many of the effects were unforeseen and misunderstood by both Europeans and American Indians at the time, but once the first landing had been made, there was no turning back.

Food and farming
When Europeans began to settle in the Americas, they brought with them their own domesticated animals and foods. The enormous range included citrus fruits, grapes, and bananas; coffee, sugar cane, rice, oats, and wheat; and cattle, sheep, pigs, and horses. To cultivate their crops and pasture their animals, the settlers cleared huge areas of woodland, destroying the habitats of some native wild species in the process, and unintentionally contaminating American fields with the seed of weeds such as dandelion and sow thistle. The exchange in the other direction brought potatoes, tomatoes, sweet corn, beans, pumpkins, squash, and tobacco to the Old World, as well as turkeys and guinea pigs.

The introduction of new staple crops transformed lives on both sides of the Atlantic. Potatoes and maize, carbohydrate-rich and easily grown, helped overcome chronic food shortages in Europe and, along with manioc and sweet potatoes, spread on to Africa and Asia. In the New World wheat, which thrived in the temperate latitudes of North and South America and in the

Christopher Columbus
highlands of Mexico, eventually became a fundamental food crop for tens of millions of settlers. The arrival of horses in the New World was also revolutionary, permitting more effective and selective hunting, as well as facilitating travel and transport.

**Biological catastrophe**
The most immediately devastating impact of the Columbian Exchange followed the introduction of new diseases into the Americas. The settlers and the chickens, cattle, black rats, and mosquitoes that accompanied them introduced contagious diseases to a people who had no biological defense against them. American Indians’ immune systems were not adapted to cope with alien diseases such as smallpox, measles, chickenpox, influenza, malaria, and yellow fever. Once they were exposed to them, they began to die in the hundreds of thousands. Half the Cherokee nation died in a smallpox epidemic in 1738, and some other tribes were wiped out entirely. European explorers encountered and brought back American illnesses such as Chagas Disease, but the effect on Old World populations was negligible compared with the consequences of Old World pathogens in the New World.

**Exchange economics**
From the start, the Columbian Exchange had a strong economic driver. Commodities ranging from gold and silver to coffee, tobacco, and cane sugar were transported on a vast scale, mostly to the benefit of European traders and plantation owners. Very soon, slave trading became a key part of this network too. The movement of people from continent to continent in vast numbers provided a continual supply of labor for expanding new economies at the cost of unspeakable oppression, misery, and early death to many generations. The dramatic and irrevocable changes brought about on both sides of the Atlantic by the Columbian Exchange continued to shape lives for centuries.
In the autumn of 1517, Martin Luther, a monk and teacher of theology at the University of Wittenberg in Germany, set off a chain reaction that would transform Europe. Deeply concerned by what he saw as corrupt practices in the Catholic Church, he wrote a series of 95 theses—arguments—against them, which he then circulated within the university. According to some reports, he also nailed them to the door of the Castle Church in Wittenberg. The theses were soon published more widely, prompting Pope Leo X to charge Luther with heresy. Luther responded by breaking with the Catholic faith,
so initiating the Reformation—the rise of churches based on reformed practices, and a focus on scripture rather than on priestly authority. Because of the churches’ origin in protests against Catholic practices and beliefs, they became known as Protestant churches.

**Spread of the Reformation**
Luther was not alone in seeking religious reform. Swiss preacher Ulrich Zwingli (1484–1531) led a Protestant church based in Zurich, and Frenchman John Calvin broke from the Catholic church in around 1530. Forced to flee France, he went to Geneva, Switzerland, where he supported the reform movement, eventually helping to shape Protestant doctrine.

Reformers’ beliefs did not necessarily concur. Calvinists were markedly different from Lutherans, and Anabaptists were persecuted by Protestants as well as Catholics for their radical views. Luther himself supported the brutal suppression of the Anabaptist-led Peasants’ Revolt in the 1520s. What the Protestants had in common was that their views brought them into fundamental theological conflict with the Catholic church. Reformers’ ideas spread via the relatively new technology of the printed word. Before movable type and presses made printed books possible in the 1450s, books were all written by hand in Latin, the international language of the church. Print allowed information to be reproduced cheaply and quickly, and demand rapidly grew for books written in the vernacular. Luther wrote his theses in Latin, but before long they had been translated and printed in German, French, English, and other languages. Books and pamphlets describing church abuses and outlining Protestant theology soon followed, and were printed in large numbers.

**At the Diet of Worms** in 1521, Luther refused to recant: "Unless I am convicted of error by the testimony of Scripture... I cannot and will not retract.... Here I stand. God help me!"

**Importance of The Word**
A central idea in Protestant theology was that authority came not from the priesthood, but from scripture itself. For this reason, access to the Bible was essential both for the reformers and their followers. Bibles printed in native European languages were appearing by the 16th century, Luther’s German translation of the New Testament was published in 1522, and a translated version of the whole Bible including the Apocrypha followed in 1534. A year later, Miles Coverdale (1488–1569), sometime friar, preacher, and Bishop of Exeter, produced the first complete Bible in English. A French translation by theologian Jacques Lefèvre d’Étaples (c.1450–1536) appeared between 1528 and 1532.

By the mid-16th century, Reformation ideas had been widely disseminated. Lutheranism spread across Germany and Scandinavia; Calvinism took hold in much of Switzerland, and made significant inroads in Scotland. There were »
also Calvinists in France, where they were called Huguenots, although that country was split between Catholics and Protestants, who fought in the Wars of Religion of the second half of the 16th century. Spain, Portugal, and Italy remained Catholic.

In England, the seeds of reform were sown early. Many people objected to abuses such as the use of church funds to pay for clerics—including the Pope and foreign bishops—to lead a life of luxury. However, Protestant ideas were not yet widely enough held for the faith to take hold. Things changed when Henry VIII of England broke with Rome in 1534, rejecting papal authority and proclaiming himself head of the church in England. As supreme ecclesiastical leader, he exercised his sole right to authorize the publication of the English Bible, the Coverdale Bible, but English religious practice and doctrine remained Catholic. A moderate form of Protestantism was later established in England under Henry’s daughter Elizabeth I.

Reformers risked their lives by speaking out at a time when heresy was punishable by death. Czech reformer Jan Hus had been burned at the stake in 1415, Zwingli died in a battle between Protestant and Catholic forces in 1531, and English Bible translator William Tyndale was executed in 1536. Luther, urged to recant by Pope Leo X in 1520, threw the written request on a bonfire, so church authorities handed him over to Frederick the Wise, Elector of Saxony and founder of the University of Wittenberg, for punishment. Frederick convened a formal enquiry or “Diet” at Worms, at which Emperor Charles V presided. The emperor rejected Luther’s arguments and banned his views in the empire, but Luther refused to recant. He was outlawed and excommunicated, but Frederick saved him from execution by faking his abduction, then hiding him at the Wartburg castle. Luther continued to write and organize, garnering increasing support.

**Powerful allies**

Support from people in positions of power assisted the spread of the Reformation. Like Henry VIII in England, the princes of Germany resented church wealth, taxation, and its independent law courts, and were also eager to strengthen their own power. Throughout the Middle Ages, popes had made alliances with kings and emperors, and intervened in secular affairs. Many German princes wanted to prevent such alliances by cutting ties with Rome and removing bishops from their princedoms, so their support for the reformers was motivated by political expedience as well as personal piety.

In what would become the first in a long list of religiously motivated conflicts between Catholics and Protestants, the Holy Roman Emperor Charles V invaded Lutheran territory in an effort to stamp out the movement. Luthers united against him and, despite his triumph at the Battle of Mühlberg in 1547, he was unable to suppress them. A temporary compromise was eventually reached at Augsburg in 1555 when the emperor conceded that each prince within the empire could choose how to worship in his own domain. The peace was not to last, however; bitter divisions drawn by the Reformation would cause people across Europe to take up arms again, and the continent was ravaged by more than a century of religiously-motivated conflict.

**Reform from within**

Even before Luther wrote his 95 theses, a movement for reform had begun within the church. Inspired partly by Renaissance Humanism, it brought on a resurgence of scholarship and philosophy, and motivated churchmen such as Spaniard Francisco Ximenes, who produced a Bible with texts in Hebrew, Greek, Latin, and Aramaic.
Has the Catholic Church been dead for a thousand years to be revived only by Martin?

Cardinal Girolamo Aleandro, 1521

However, Luther’s clear theological challenges prompted the papacy to prepare a more widely considered response. In 1545, Paul III called together the Council of Trent at which bishops and cardinals reaffirmed Catholic doctrines, from the importance of the priesthood and sacraments to the legitimacy of indulgences. But the council also introduced reforms: it forbade abuses such as the holding of multiple offices by one priest, set up training seminaries for priests, and, in an attempt to slow the spread of Protestant doctrine, established a commission to specify which books Catholics were forbidden to read. In addition, a number of popes from Paul III onward lived austerely, appointed like-minded bishops, and reviewed papal finances.

Counter-Reformation

The council met periodically for 18 years, and provoked a renewal and resurgence of Catholicism from within the church that is usually called the Counter-Reformation. The new Society of Jesus (also known as the order of Jesuits), founded by Spanish knight Ignatius Loyola in 1534, was approved by the pope in 1540 as an answer to the Reformation, and it spread a powerful Counter-Reformation message across Europe. The contemporary revival of Christian art, which coincided with the flowering of the baroque style in Italy, added a vibrant emphasis.

Corruption is widespread in the Catholic Church.

Martin Luther begins his reform campaign based on his 95 theses.

Luther’s reforming influence spreads across Europe and divides the Catholic church.

Some attempts are made at internal reform.

The Catholic church begins the Counter-Reformation.

The Ecstasy of Saint Teresa, a white marble altarpiece and one of the masterpieces of High Roman Baroque, by Gian Lorenzo Bernini, the leading sculptor of his day.

Baroque churches were imposing and ornate, filled with affecting sculptures, paintings, and strikingly posed biblical scenes. This potent propaganda served to underline the difference between Catholic churches and their Protestant counterparts, which were usually plain and undecorated. Baroque art, together with the zeal of reforming popes and Jesuit priests, helped to ensure that the Catholic church survived and flourished in countries such as Italy and Spain, even while the Protestant movement was gathering strength elsewhere. Europe, which had once been united under the pope in the Roman Catholic Church, was now irrevocably split into Catholic and Protestant states. The seeds were sown for over a century of conflict as subjects took up arms against their rulers, kings and princes clashed, and nations attacked nations in the name of religion.
HE BEGAN WAR IN BOHEMIA WHICH HE SUBJUGATED AND FORCED INTO HIS RELIGION. THE DEFENESTRATION OF PRAGUE (1618)
The trio landed some 65 ft (20 m) below in a dung heap stacked against the castle walls. Known as the Defenestration of Prague, this event began the Thirty Years’ War, a series of conflicts that devastated huge areas of Europe. Religious differencesThe Defenestration took place in the wake of long-standing disputes between Catholics and Protestants about whether people should be allowed to worship freely in their own way. These differences affected much of Europe, and before war ignited Bohemia, there were violent religious conflicts in several other parts of the continent.

The disputes also involved rivalries for power between royal and aristocratic families who favored the different sides and used the conflicts to promote their own interests. The Netherlands, for example, were home to many Protestants, but were ruled by Catholic Spain, whose ruler Philip II wanted to eliminate Protestantism. The largely Protestant Seven Provinces in the northern Low Countries revolted against the king’s rule. Religious clashes escalated into violence against the perceived repression of the Habsburg Crown, leading to the formation of the independent Dutch Republic in the north of the region.

Philip also planned to conquer England, which was moderately Protestant under Elizabeth I, and wanted to place a Catholic monarch on the English throne. In 1588, he sent his famous Armada to invade the country, but a combination of superior English
naval tactics and stormy weather foiled the attempt, and England remained independent.

These religious differences proved particularly devastating in 16th-century France, where the substantial Protestant minority generally known as the Huguenots were widely persecuted. Many Protestants, especially Calvinist ministers, had their tongues cut out, or were burned at the stake. In the so-called St. Bartholomew’s Day Massacre of 1572, a group of targeted assassinations followed by a wave of mob violence against the Huguenots lasted several weeks and left thousands dead.

There followed a series of so-called Wars of Religion that lasted some 36 years. After eight periods of fighting, punctuated by uneasy truces and broken agreements, the wars came to an end in 1598 when the French king Henry IV, who had been a Protestant leader before taking the throne, promulgated the Edict of Nantes. This agreement gave the Huguenots certain rights, including freedom of religion in particular geographical areas. It also maintained Catholicism as the established religion in France, and obliged Protestants to observe Catholic holidays and pay church taxes. Disputes between the two sides still flared from time to time, however, and many Huguenots left France to seek safety in other countries such as England and the Netherlands.

**Thirty Years’ War**

The religious wars and disputes in France, the Netherlands, and England formed a troubled backdrop to the Thirty Years’ War in Europe. Most people in Bohemia were Protestants, but the area was part of the large Holy Roman Empire, which also included Germany, Austria, and Hungary, and was ruled by Catholic Habsburg emperors. The emperors acted as overlords to local kings, princes, and dukes. Some of them, notably Matthias, who was on the throne when the Defenestration took place, granted their Protestant subjects the right to worship as they wished. Matthias achieved this by ratifying the Letter of Majesty, a charter that had been signed by the previous emperor, Rudolf II, which guaranteed Protestants religious freedom and certain other basic rights. However, Matthias’ successor, the ardently Catholic Ferdinand, felt no obligation to honor the Letter of Majesty. He suppressed Protestant churches and appointed Catholics to high positions. This reignited a dispute that had existed in Bohemia since the first stirrings of the Protestant Reformation in the 15th century.

After the Defenestration, both sides began preparing for war, but the process was accelerated when, in 1619, Matthias died. Ferdinand, who was already King of Bohemia, then also became Holy Roman Emperor. Bohemia’s Protestant leaders tried to reduce the Catholic emperor’s local power by deposing him as King of Bohemia and inviting their...
own candidate, the Protestant Frederick V, Elector Palatine, to rule in his stead.

Frederick’s credentials as a Protestant were excellent, not only because of his own faith, but also by marriage: his wife was Elizabeth Stuart, daughter of England’s Protestant king James I. However, in order to make Frederick king, the Bohemians had to depose a monarch who had been legally crowned, a move that deprived them of support from a number of their potential allies.

In 1620, the forces of Bohemia gathered to face those of the Holy Roman Empire at White Mountain, outside Prague. The forces seemed evenly matched: the Protestants under Frederick and Christian of Anhalt had a larger force, but the empire’s soldiers were experienced and well led by the Spanish–Flemish nobleman Field Marshall Tilly, and renowned general Albrecht von Wallenstein. After only one hour, Bohemian forces were crushed—4,000 dead or taken prisoner compared to 700 of the empire’s forces—and Tilly entered Prague. Frederick fled, and many of the Protestant leaders were executed; ordinary Protestants were ordered to leave or convert to Catholicism; and Bohemia was left devastated, depopulated, and almost powerless. The area remained overwhelmingly Catholic into the 20th century.

A destabilizing reform

What happened in Bohemia was a symptom of the instability of the wider Holy Roman Empire. In its history there had often been power struggles between emperors and local rulers, but a general balance of power had emerged in which the emperor resolved to respect the rights of the individual states that made up the empire. This balance was upset by the changes of the Reformation, when Protestant beliefs strengthened in some places (such as Saxony), and Catholicism prevailed in others (such as Bavaria). A series of struggles then escalated into armed conflict.

The [Protestant] wound is degenerated into gangrene; it requires fire and sword.

Fernando Álvarez, c.1560s

Most of the battles were in the German and central European lands. In a few years the Habsburg imperial army, raised for Ferdinand and led by skilled military leader Albrecht Wallenstein, had crushed its rivals in Germany, and gone on to overwhelm Denmark. By 1629, Ferdinand was in a position to reclaim the lands that had passed into Protestant hands.

However, the Protestants still had two powerful allies. One was Sweden, under King Gustavus Adolphus, an able military leader; the other was France, a Catholic country, but one that wanted to curtail imperial power. In 1630, Gustavus arrived in Germany with a large army and won a significant victory at Breitenfeld in 1631, with financial assistance from France.

In the mid-1630s the Habsburgs fought back, with the help of Spain. The conflict had now become an all-encompassing war involving virtually every one of Europe’s major countries in a struggle for power. The emperor wanted to win

Gustavus achieved his decisive victory at Breitenfeld with a new, combined-arms approach in which infantry, artillery, and cavalry worked together in self-supporting units.
As different powers intervened in the Thirty Years’ War, the conflict morphed from a split over religion into a clash for European supremacy between France and the Habsburgs.

back his lands in Germany, while the Spanish wanted their allies the Habsburgs in power so that they could cross Europe with ease in their hoped-for attack on the Netherlands. France, fearful of being surrounded by the Habsburgs and their allies, continued to try to reduce imperial power.

### The end and the aftermath

By the 1640s, anti-imperial forces were regaining the upper hand. France defeated Spain at Rocroi in the Oise valley in 1643, while in 1645, Sweden met the imperial army at Junkau, southeast of Prague. Around half the 16,000-strong imperial army was killed in this bloody battle, and it looked as if the Swedes would march on Prague or Vienna. However by this point, both sides were exhausted, and no advance was made on either city.

The battles of the Thirty Years’ War were conducted on a large scale. Forces of thousands came together in cavalry charges backed up by firearms, and large numbers of mercenaries were employed. The battles were fought with professional speed and ruthlessness, but what came after was sometimes even worse. Vast armies committed infamous atrocities as they pillaged huge areas of country to find food, and removed anything that might be useful to their enemies. Rural areas suffered particularly badly at the hands of the scavenging troops—Germany lost around 20 percent of its population—but trade and manufacturing were also affected by the damage and devastation left behind. Central Europe took decades to recover from the war, although countries with strong trade networks and sea power, such as England and the Netherlands, fared better.

Repeated artillery battles also wore down both armies. Exhausted, the sides eventually came together to make peace. Representatives of the empire, Spain, France, Sweden, and the Dutch Republic, as well as rulers of German princedoms and cities, and other interested parties, assembled in 1648 in two north-German cities, Osnabrück and Münster, to agree the Peace of Westphalia. The talks could not resolve basic differences between political and religious interests; they did however produce an agreement to end the war, and the Peace established an overall balance of power among a number of independent nations.

Although Europe was now permanently divided into states that were predominantly Catholic or predominantly Protestant, they had agreed to learn to coexist with one another. The Peace set the precedent of creating agreements between nations by means of high-level diplomatic meetings, the like of which have played a key part in international relations ever since.
In February 1556, Abu Akbar became the new ruler of the Muslim Mughal dynasty in northern India, founded 30 years earlier by Turkic-Mongol invaders from Central Asia. The emperor’s forces immediately confronted the army of Hemu, a rival claimant to the throne of Delhi, at the Second Battle of Panipat. The Mughals inflicted a crushing defeat on Hemu, and regained territory lost by Akbar’s father, Humayun. Akbar then gradually consolidated and extended his authority, annexing all of northern and part of central India. Rulers were deposed and killed and citizens massacred as once-independent kingdoms became provinces of his empire.
Support and survival

Akbar maintained the political unity of his sprawling realm by building an administration capable of expansion as new territories were incorporated. He created a network of highly paid nobles who served as provincial governors, or were employed as commanders of field armies or as part of the central military—the backbone of the empire. He also recruited talented men from across India (and Persia), both Muslim and Hindu, into his government, remunerating them with money or land.

This system rewarded individual merit and loyalty, but kept the administration from becoming too centralized—a distinct advantage in an empire that was difficult to hold together from a single center. The emperor himself was often on the move, traveling with his court and harem in well-appointed tents.

Another unifying factor was the spread of Islam, together with its arts and culture; however, Akbar believed in religious freedom and allowed the empire’s non-Muslim populations, which included a large Hindu majority, to live by their own faiths, laws, and customs.

Interaction with Persia

Babur, the founder of the Mughal dynasty, and Humayun, Akbar’s father, had developed diplomatic, cultural, and political links with another Islamic empire in the region, Safavid Persia, which stimulated Mughal interest in Persian fine arts such as miniature painting and the “art of the book.” Akbar set up studios to produce illustrated books in the cities of Fatehpur Sikri and Lahore (now in Pakistan), and Persian architects and artisans were brought to India to design and construct palaces, forts, mosques, and public buildings, including Humayun’s tomb in Delhi. This domed structure inspired major architectural innovations, and a unique Persian-influenced building style developed across the Indian subcontinent.

The Mughal Empire continued to prosper under Akbar’s son Jahangir, but later in the 17th century it declined amid religious conflict and economic problems. The emperors were defeated by Afghan invaders, then came under the control of the Marathas, Hindu warriors who dominated Indian affairs in the second half of the 18th century, and finally were taken over by the British after Britain defeated the Marathas in 1818.

In this miniature painting, the Mughals are seen battling their Hindu enemies at Panipat. As later conquests added money, men, and weapons to the imperial army, it became supreme.
In 1620, a group of English people who could not legally worship as they wished to in England set sail across the Atlantic to begin a new life in America. This group later became known as the Pilgrims. They set off on two ships, but one proved unseaworthy so they had to continue in just one, the *Mayflower*. Winter storms ravaged the 66-day crossing and the ship’s main beam fractured. While still aboard, the Pilgrims drew up the *Mayflower Compact*, which pledged their loyalty to the Crown but also asserted their right to make their own laws within the English legal framework. They settled at Plymouth and, although many died that first winter, their community endured.

**Early colonization**

At that time, England, like other countries, was competing to establish colonies in North America. Jamestown had been founded thirteen years before the Pilgrims landed at Plymouth, but it was not a religious community. The Colony of Virginia, centered around Jamestown, had been established by English colonists in 1607 under English Protestants seeking religious freedom sail to North America on the *Mayflower*.

More religious separatists follow, swelling the colony’s population.

Other English colonies are founded by companies granted royal charters from the Crown.

The colonists develop a form of government based on the pursuit of religious freedom, following the English parliamentary model.
a charter from the Crown, and was their first permanent settlement in the Americas. French explorers had established fur trading posts up the rivers of Canada; Dutch and Swedish colonists arrived in North America in the early 17th century, and in 1613 the Dutch established a trading post on the western shore of Manhattan Island.

**Government and trade**
Both Plymouth and Jamestown developed representative institutions in which colonists elected officials to govern their own affairs. Inspired by the English parliamentary model, and growing out of the assertion of rights articulated in the *Mayflower Compact*, these early developments established a model of self-rule that came to characterize English colonization in North America.

Each colony had a governor, appointed by the British monarch, and a legislature, elected by the colonists. There was often tension between the two, because the legislature had to work within the framework of existing English law. However, the king and government in London, working with the governor, saw the colonies as a resource, rich in raw materials, that they could exploit to their advantage.

To ensure America remained a ready market for British industry, colonial trade was restricted by the Navigation Acts, which required that all commodity trade take place in British ships crewed by British sailors. The colonists came to see these measures as a willful suppression of their trade and manufacturing. Tensions arose on both sides of the Atlantic as British and colonial merchants sought to protect their interests.

**Colonial growth**
Relations between the colonists and the indigenous peoples of the East Coast were also starting to strain. The increasing colonial population put pressure on land and resources, pushing people west to settle on land belonging to American Indians.

The groups struggled to coexist harmoniously. An uneasy peace, punctuated by violence, typified relations between settlers and American Indians for many years.

**Religious persecution**
In the early 17th century, the English were legally obliged to worship as prescribed by the Church of England. Although the English church had already broken from the Catholic Church, many people still felt that its hierarchical priesthood and set rituals, hymns, and prayers were Catholic features that should be swept away.

Puritans, so-called because of their desire for religious purity, hoped to reform the church from within. Other groups, known as Separatists, set up their own “separate” congregations, but when their leaders were imprisoned or even executed, they moved to the more tolerant Netherlands. Here they could adopt the simpler form of worship they preferred, but it was very hard to earn a living because the country’s professional guilds were closed to them. This is part of the reason that the Pilgrims, and later others, decided to seek a new life in North America.

1649 The Commonwealth of England (a republic) is formed.
1653 Cromwell takes the title Lord Protector for Life, giving him the power to call or dissolve parliaments.
1658 Cromwell dies and is succeeded as Protector by his son, Richard.
1660 The monarchy is restored: Charles II becomes King of England.

King Charles I asserts his divine right to rule.
The king needs to raise taxes to pay for wars.
Parliament attempts to limit the king’s authority. A civil war erupts between Crown and parliament for the right to rule.
Parliamentary forces, led by Cromwell, win the war.
The king is executed and an English republic is instituted.

During the 1640s, England was plunged into a series of wars, fought to decide the future of the country and known collectively as the English Civil War. On one side were the Royalists—predominantly landed gentry and aristocrats who supported King Charles I and his right to rule independently of parliament. On the other were the Parliamentarians—mainly smaller landowners and tradesmen, many of whom held Puritan beliefs and disliked Charles’s autocratic stance. By 1648, the Parliamentarians had beaten Charles on the battlefield and Oliver Cromwell, their leader, ejected from parliament all those who were prepared to negotiate
with the king, leaving the remainder (known as the Rump Parliament) to vote to end the monarchy. Charles was tried for treason against England and was beheaded in 1649, after which England began an 11-year period as a republic.

The causes of war
King Charles I and parliament were natural opponents. Charles was sympathetic to Catholics while parliament was Protestant, and he believed in the divine right of kings—the idea that the monarch’s appointment is approved by God and so he or she has absolute power.

The clash first came to a head over the king’s repeated attempts to raise money for a war in France. Parliament tried to curb his power to do so by introducing a Petition of Right in 1628, making it a necessity for its members to approve taxation. However, Charles got around this by levying taxes using antiquated medieval laws, selling trading monopolies to raise cash, and ruling without parliament. In 1640, the king was forced to call parliament for the first time in 11 years to raise money to quell a Scottish revolt. Once called, parliament tried to bring in further measures to limit his power, such as making it illegal for the king to dissolve parliament, but he responded by trying to arrest five MPs. The dispute escalated into the First Civil War in 1642.

The war and its effects
Initially, the Royalists gained the upper hand but in 1644 the Parliamentarians reorganized their troops under Oliver Cromwell. With their disciplined, professional approach, this “New Model Army” forced Charles to surrender in 1646. However, the king restarted the war two years later, and this Second Civil War—which ended in a Royalist defeat at the Battle of Preston in 1648—began the chain of events that led to his execution in 1649 and the formation of a republic under Cromwell called the Commonwealth of England.

Like Charles, Cromwell found relations with parliament difficult, but he tried to bring in reforms. He ruled with stern Puritan authority, imposing it ruthlessly on the Scots and the Irish. Soon after he died, the country—perhaps tired of Puritan austerity—welcomed Charles I’s exiled son home to reign. Charles II agreed to limitations on royal power and to uphold the Protestant faith, but his heir—his Catholic brother James II—clashed with Anglican bishops and offended Protestants by offering prominent positions to Catholics.

Fears of having another Catholic king mounted until, in 1688, in what became known as the Glorious Revolution, James was deposed. The king was sent into exile and replaced by his Protestant daughter Mary, who ruled with her Dutch husband William of Orange. In 1689, William and Mary accepted a Bill of Rights, which ensured their subjects had basic civil liberties, such as trial by jury, and making the monarchy subject to the law of the land. Britain has remained a constitutional monarchy, in which no king or queen could defy Parliament as Charles I did, ever since.

King Charles I of England
The son of Stuart King James I of England (King James VI of Scotland) and Anne of Denmark, Charles was born in 1600 and became king in 1625. From the start, he alienated both subjects and parliament with his demands for taxation (mostly to fund wars in France) and his assertion of his divine right to rule. He also clashed with the church because of his sympathies with Catholicism (he was married to the French Catholic princess, Henrietta Maria). In addition, he was unpopular in Scotland, where he tried to replace the prevailing presbyterian system of church governance (without bishops) with the more hierarchical episcopal system (with bishops, following the Anglican model), which led to political and military conflict in 1639 and 1640 (known as the Bishops’ War). During the English Civil War, he took an active part in leading the Royalist armies until he was captured; initially, he was put under house arrest, then he was imprisoned before his execution in 1649. He continued to assert his divine right to rule during his trial.
THE VERY BEING OF THE PLANTATIONS DEPENDS UPON THE SUPPLY OF NEGRO SERVANTS

THE FORMATION OF THE ROYAL AFRICAN COMPANY (1660)

In 1660, the Company of Royal Adventurers Trading to Africa was established in England. Its charter, endorsed by the king, gave its ships the exclusive right to trade on the West African coast, and permitted its members to set up forts there, in exchange for giving the English Crown half the resulting profits. Twelve years later, the company was reorganized as the Royal African Company and given still greater powers: to build forts and "factories" (where slaves were held before being shipped over the Atlantic), and employ its own troops. The company’s particular significance is due to its crucial role in facilitating and developing the

slave trade. It transported many thousands of Africans to a life of slavery, working with West African leaders to build a trade that lasted even after the company disbanded in 1752, and that would eventually see millions of Africans displaced to lives of toil in the Americas.

Foundation of the company
Soon after its foundation, the company became involved in the Second Dutch War, a trade conflict between the Netherlands and England during which the Dutch took many English forts, excluding them from the slave trade during the war. Involvement in the war almost brought the Company of Royal Adventurers to bankruptcy, but in 1672, with a new charter from the king, the company re-emerged, renamed, restructured, and granted the right to carry slaves for sale in the Americas. It prospered, transporting some 100,000 slaves between that year and 1698 when, royal power having been restricted by the Bill of Rights, the company lost its monopoly over the trade. After 1698, other merchants were allowed to join the trade but had to pay a levy to the company of 10 percent on all their African exports. The involvement of other merchants strengthened the trade to the point that it became part of the fabric of British mercantile life, continuing throughout the 18th century.

The slave trade itself was much older than the Royal African Company. Portuguese traders in the late 14th century were the first

English Crown needs revenue.

English merchants see profit in the slave trade.

Royal African Company is formed to organize trade to enrich merchants and the Crown.

Millions of Africans are displaced and enslaved in the growing transatlantic slave trade.
Europeans to ship slaves from West Africa. By the 16th century, the Portuguese were bringing slaves in huge numbers to Brazil to work on sugar cane plantations. Brazil remained the biggest destination for the import of African slaves until the outlawing of the trade. The first English slaving expeditions took place in the 1560s, in which merchants bought captured slaves from African rulers. During the 17th century, with the increase of English colonization, the market for African slaves grew and the Royal African Company took full advantage of it.

**Triangular trade**
The transatlantic slave trade soon became part of a larger triangular trading network, in which ships took slaves from Africa to the Americas; refilled the holds with goods to transport to Europe; then took European manufactured goods on to Africa for sale, completing the triangle. Ships carried commodities such as sugar, molasses, and coffee from the Caribbean to England; rice, indigo, cotton, and tobacco from the southern colonies in North America; and furs, timber, and rum from the northeast. On the England-to-Africa leg, they carried a range of items including cloth, guns, iron, and beer. Goods such as ivory and gold were carried directly from Africa to Europe, not as part of the triangular trade but still bolstering the system.

The trade network brought huge profits to plantation owners in the Americas, and to English manufacturers, as well as to the merchants who dealt in the slaves and other goods. Port operators, West African leaders who sold slaves, bankers who loaned money for expeditions, and even English factory workers whose jobs depended on raw materials imported from abroad, all benefited.

As a key part of this trading network, the slave trade made possible the rapid rise of Western capitalism in the 18th century. Even factories some distance away from England's trading ports became involved. A notable example was the business of arms manufacture, which was based in the English Midlands at population centers such as Birmingham, conveniently close to supplies of iron. Some 150,000 guns, mostly made in these Midland factories, were exported to West Africa every year; almost all of them were then exchanged with African merchants for slaves. English cutlery from Birmingham and Sheffield was also traded in the same way. So many people had vested interests in the triangular trade that it became difficult for European politicians even to criticize the system, let alone abolish it.

The number of people who were enslaved and traded was vast. It has been estimated that by the time the slave trade was outlawed in Britain in 1807, British merchants had forced some 3 million Africans into lives of slavery in the Americas. Unknown numbers of people did not even reach America, but died en route in the appalling conditions on board the slave ships. It is likely that even more were carried by Portuguese traders bound for Brazil; ships from other nations carried smaller numbers. Some historians have estimated the total number at around 10 million; others put the figure still higher.

---

The shrieks of the women, and the groans of the dying, rendered the whole scene of horror almost inconceivable.

*Olaudah Equiano, African writer and freed slave (1789)*
European colonies
Spanish, Dutch, and French settlers pioneered the plantation system in the Caribbean, producing crops such as sugar and coffee on huge farms, or plantations. Their principal Caribbean colonies included Cuba (a colony of Spain), Haiti (France), and the Dutch Antilles (the Netherlands). The use of slave labor on these plantations generated substantial profits for owners. The British presence in the area increased in the 17th century, when Britain’s most successful colony was Barbados, where there were 46,000 slaves by the 1680s. In the 18th century there was also a sugar boom in Jamaica.

Most of the native populations were wiped out in the European conquests, and European workers did not fare well in the local conditions, so plantation owners increasingly relied on merciless exploitation of slaves. Slavery was also prevalent in the colonies of North America, especially the southern areas where crops such as tobacco were grown on plantations. Slaves were often treated as non-human objects, forced into labor and subjected to cruelties such as beating, branding, and worse.

Slavery beyond the triangle
Colonists from Europe also practiced slavery beyond the Atlantic trading triangle. The Dutch pioneered slave trading in Southeast Asia, and also traded across the Indian Ocean with areas such as Madagascar and Mauritius. Most of this trading was conducted under the auspices of the Dutch East India Company, which had its eastern headquarters on the island of Jakarta, known to the Dutch as Batavia, as well as a base in Sri Lanka. From these points they sent slaves around the Indian Ocean, from eastern Indonesia to southern Africa. Once the Portuguese and English had set up bases, there was also further slave trading along the Indian coast.

The slave trade was not solely carried out by Europeans. Muslim merchants also transported slaves from East Africa for sale elsewhere in the Muslim world.

However, the triangular trade was a crucial element in the creation of a global economy run by Europeans and their colonial offshoots for their own profits. It permitted a phenomenal growth in the wealth of countries that ran the trade. In Britain, for example, the value of foreign trade rose from £10 million at the beginning of the 18th century to £40 million at the end. But the human cost of the trade in slaves, which influenced patterns of thought and behavior for centuries to come, remains incalculable today.
THERE IS NO CORNER WHERE ONE DOES NOT TALK OF SHARES

THE OPENING OF THE AMSTERDAM STOCK EXCHANGE (1602)

The Amsterdam Stock Exchange—the world’s first permanent market for stocks and shares—opened in 1602 under the auspices of the Dutch East India Company (known in the Netherlands as VOC). The company was a vast enterprise—in effect, the first international corporation—and it was created to facilitate trading expeditions to Asia. Unusually, the Dutch government had granted the company the power not only to trade, but also to build fortifications, establish settlements, raise armies, and enter into treaties with foreign rulers. Since the organization had a huge network of ships, ports, and personnel, it required considerable funding and many investors. The Amsterdam Stock Exchange was
An expanding economy

In the 17th century, the Netherlands was growing economically despite being involved in a long war with Spain. The northern part of the region (the Dutch Republic, which was Protestant) had split from the southern half (Flanders, which was Catholic) in the late 16th century. The Republic consisted of seven separate northern provinces, each with a great deal of independence but under the umbrella of a federal government called the States-General. Protestant merchants who had lived in Catholic cities, such as Antwerp, moved north to escape persecution, taking with them their capital and trading links. Also, many Flemish artisans who were skilled in textile production (primarily weaving wool, silk, and linen) emigrated to the northern cities of Haarlem, Leiden, and Amsterdam, boosting the Dutch Republic’s economy further.

As the 17th century progressed, the Republic really began to prosper. Various factors came together to make this small region successful. Most importantly, the nation had a strong tradition of seafaring, giving it a huge advantage over many other countries. In addition, its citizens had a strong work ethic—largely due to the Protestant belief that worldly work was a duty and a route to salvation—so productivity was high. There was also a growing population (especially of the urban middle classes) and an expanding major city—Amsterdam—which proved an ideal center for trade. All of these contributing factors resulted in the Dutch economy moving increasingly toward shipping, trading, and finance.

Agricultural revolution

The expanding population of the Dutch Republic in the 17th century encouraged farmers to make agriculture much more productive. In large part, this was achieved through continued land reclamation—a process that was already well underway by the late Middle Ages. The Dutch also changed the way they used their land. Instead of growing grain one year and letting the land lie fallow the next, farmers began planting certain nitrogen-producing crops (such as peas, turnips, and clover, which they could use as animal feed), in order to improve the soil ready for the next corn crop. Growing more fodder meant that farmers could keep larger herds, thereby increasing production of meat and milk as well as manure, which could be used as fertilizer. This greater productivity helped to sustain a growing population, although some wheat still had to be imported to make up the shortfall. It also freed up larger segments of the population to work in trade or finance rather than agriculture.
The expanding merchant class saw large potential profits in the spice trade with Asia and, as in other maritime cultures such as Spain and Portugal, navigators sought new sea routes to the east. The Dutch traveled all over the globe and set up colonies, including one in North America: New Amsterdam, which they officially settled in 1624 and was renamed New York when the British took over. In 1596, the Dutch explorer Willem Barentsz tried to find a northern passage to Asia and in the process discovered Svalbard (Spitsbergen), which later became a destination for Dutch whalers.

Most importantly for their prosperity, from 1595 the Dutch began to make regular journeys to Southeast Asia to trade in spices, particularly pepper, nutmeg, cloves, and cinnamon. They established colonies in the region and founded the city of Batavia, later renamed Jakarta. With this permanent base, the Dutch had the ability to trade long-term, producing a massive boost to their economy.

**A need for investment**

While the wealth generated by exploration and trade was injected back into the Dutch economy, at the same time investment was required to cover the considerable costs of overseas expeditions. A trading voyage to Asia in the 17th century was a very risky venture—the potential profits were high, but storms at sea, pirates, warfare, or an accident could lead to the loss of a ship, crew, or cargo and wipe out all the profits. It therefore made sense for many people to invest in each voyage and spread the risk, rather than one entity shouldering all the costs and responsibilities. Private trading companies were set up, each investing a small amount in a larger whole, and all being well they would then receive a commensurate share of the profits.

**Birth of the Exchange**

In 1602, these trading companies merged to form the Dutch East India Company, and shares in the enterprise were allocated at the new Stock Exchange in Amsterdam. It was established at the outset that the owners could buy and sell these shares, and very quickly other companies were listing their own shares on the Stock Exchange in order to raise money. The ease of buying and selling shares meant that the Stock Exchange became very busy indeed, fueling the growth of capitalism in this part of Europe; increased investment resulted in more industry, which then led to further investment and the generation of greater wealth.

**A history of trading**

The Amsterdam Stock Exchange did not develop in a vacuum. Buying and selling securities—tradable financial assets such as shares—already had a long history in Europe. By the 14th century, possibly earlier, merchants in rich Italian trading cities, such as Venice and Genoa, had traded in securities. However, the prevailing conditions in the Netherlands in the 17th century meant that the market was especially buoyant. Since the 16th century, there had
been a strong financial market in Amsterdam, where there was a tradition of trading in commodities and speculation in everything from whale oil to tulips. The idea of buying and selling shares therefore appealed in this entrepreneurial society, especially as there was a good prospect of healthy profits from the Asian trade. In addition, the unique way in which the exchange traded—opening for limited hours only—encouraged rapid buying and selling and produced a very fluid market.

**Boosts to the economy**

The opening of the Amsterdam Stock Exchange was followed in 1609 by the foundation of the Bank of Amsterdam—the forerunner of modern national banks. The bank provided a secure place to keep money and bullion, and it assured that local currency kept its value. It thus helped to make the Dutch Republic more financially secure, underpinning the vigorous and often risky trading activity that went on in this burgeoning market.

In 1623, the market had a further boost when the Dutch East India Company negotiated a new charter, paying investors a regular dividend and permitting those who wanted to leave the company to sell their shares on the Stock Exchange. This action further increased trade on the Stock Market, which was also pioneering other lucrative activities such as futures trading.

The insurance business was also thriving in Amsterdam during this time—particularly marine insurance, which had been created in the 16th century to protect ship owners and investors against the risks of long-distance voyages. When the Stock Exchange opened, a special area was set aside for the buying and selling of insurance.

---

**A flourishing culture**

The very buoyant financial activity prevalent in Amsterdam in the 17th century encouraged the expanding middle classes to buy consumer goods, including fine furniture and oil paintings, further fueling the economy of this already successful region. A particularly strong art market developed, allowing major painters—such as Vermeer and Rembrandt, as well as numerous lesser followers—to flourish. Many artists were specialists, satisfying a growing demand for portraits, landscapes, seascapes, and still lifes, although great artists like Rembrandt excelled in all genres and art forms, including painting, drawing, and printmaking.

The increasing wealth also led to the expansion of towns, with new town halls, warehouses, and merchants’ homes springing up. Numerous brick houses, owned by the middle classes, survive in cities such as Amsterdam and Delft, many of them set on the banks of the canals that were built during this period—a time of economic boom that combined elegance and artistic flair with success in trade.
On October 21, 1600 there was a momentous battle in Sekigahara, central Japan, between two warring factions—the Eastern and Western armies—who were both fighting for control of the country. The Eastern Army, under the leadership of the lord Tokugawa Ieyasu, won a decisive victory. Three years later, the Emperor of Japan awarded Ieyasu the title of shogun, granting him the power to rule the country on the emperor’s behalf.

Ieyasu brought stability and peace to Japan and transferred the nation’s capital to Edo (now Tokyo), creating a new focus for Japanese culture as well as a central power base.

**Factional struggles**

Since 1192, the Emperor of Japan had been little more than a figurehead. He delegated power to the shogun: a hereditary, high-ranking military commander who ruled with absolute authority. However,
by the 1460s the local feudal lords (daimyos) were so powerful that few shoguns had control over them, as they and their armies of samurai warriors fought to win the right to appoint the shogun's successor. By the time of the Battle of Sekigahara, Japan had endured bitter factional struggles between its ruling classes for over a century.

Ieyasu's victory at the battle put an end to this Warring States Period. His steady rule, followed by that of the Tokugawa shoguns who succeeded him, ushered in a 250-year period of stability.

**The Tokugawa shoguns**

In many respects, the Tokugawa shoguns modeled themselves on earlier rulers—particularly Toyotomi Hideyoshi. Although he was not sufficiently high-born to become a shogun, Hideyoshi (who ruled under the lesser title of imperial regent) had brought unity to Japan in the 1580s by imposing a military, feudal style of rule whereby he wielded great power through the daimyos and their samurai warriors. The Tokugawa shoguns decided to govern in the same way, with the daimyos keeping order in their local areas. As an extra precaution, Ieyasu made the daimyos spend alternate years in Edo to ensure they would not build up local power bases; he also suppressed rivals ruthlessly.

The shoguns encouraged an ethic of loyalty and developed an elite bureaucracy. They improved Japan's road network, promoted education, and standardized the currency. The shogunate also tried to reduce foreign influence in Japan by expelling foreigners and limiting contact with the outside world. Exceptions were made for strictly controlled trade with the Chinese, Koreans, and the Dutch East India Company; all other Europeans were distrusted, as the shoguns believed that they had plans to convert the Japanese to Christianity and gain political power. Furthermore, the Japanese people were forbidden to travel and build ocean-going ships. This policy of isolation virtually cut off Japan from Western influence until the mid-19th century.

**The “floating world”**

The capital Edo became the center of a thriving urban culture during the Tokugawa shogunate. Japanese literary forms, such as the haiku (a short poem consisting of three lines and 17 syllables) flourished, as did the distinctive theatrical forms of kabuki (which combines theater and dance) and the bunraku puppetry theater. It was also a time of major achievements in the visual arts, particularly landscape painting and woodblock printing.

The capital's elite became increasingly hedonistic, with their lifestyle frequently described as the “floating world” (ukiyo). Originally, Buddhists had used the term ukiyo to mean “sorrowful world,” reflecting their opinion that life on earth was transitory and expressing a desire to reach a more permanent place, free from suffering and all earthly desires. However, in the Edo Period the homonym ukiyo (“floating”) was used to describe the joyful aspect of the ephemeral material world, reflecting the pleasure-seeking mood of the day.
In 1644, the Manchu—a semi-nomadic people who had built a large state to the northeast of China’s Great Wall—seized Beijing from the crumbling Ming regime and established their own dynasty, the Qing, as the rulers of northern China. Seventeen years later, after fierce fighting on an epic scale, the Qing had overcome the determined resistance of Ming loyalists, and extended their power across mainland China. However, their dynasty was still not secure—in 1673, Kangxi, the second emperor, was forced to confront a major uprising, which became known as the Revolt of the Three Feudatories.

The Three Feudatories were vast areas of south China that had been granted as semi-independent fiefdoms to three turncoat Ming generals who had assisted the Qing in their conquest of China. Over time, the fiefdoms became increasingly autonomous, but when Kangxi declared that they would not be hereditary, the generals rebelled. The ensuing struggle was hugely costly in terms of loss of life and economic disruption, and for a while, it seemed that one general, Wu Sangui, would topple the Qing. However, he was finally defeated by Kangxi’s supporters, and in 1683, the Qing eliminated the last stronghold of Ming support on Taiwan, which they then occupied.

With the Qing now undisputed rulers of China, Kangxi embarked on military campaigns that added parts of Siberia and Mongolia to the Chinese empire, and extended its control over Tibet. Under his exceptional leadership, and that...
The Revolt of the Three Feudatories fails, marking the end of resistance to Manchu power.

The first three Qing emperors legitimize their foreign rule by adopting Chinese ways.

In the stability that follows, China triples in size and the economy expands rapidly.

In the 18th century, China becomes the biggest manufacturing power in the world.

By the end of the 19th century, the Qing are a power in name only, as the pressures of European imperial expansion and growing internal dissent fatally weaken the regime.

of his two immediate successors, China enjoyed a golden age of peace, economic prosperity, and political stability that lasted until the late 18th century.

A global superpower
During his 61-year reign, Kangxi won the cooperation and loyalty of his native Han Chinese subjects—who had once viewed the Manchu as barbarians—by preserving and honoring China’s cultural heritage. He also continued the preceeding dynasty’s form of government, and allowed Ming officials to retain their provincial posts alongside Manchu appointees, although the latter supervised most of the work.

Qing China became immensely powerful during the reigns of the next two emperors—Yongzheng (1722–35), who also kept a tight control on government and the bureaucracy and increased state revenues by reforming the tax system, and Qianlong (1735–96), under whom the empire’s borders reached their greatest extent and the population boomed. Qianlong was an avid patron of the arts who wrote poetry and sponsored literary projects that enhanced his people’s reputation—although at the same time, he banned or destroyed books that were judged to be anti-Qing.

Qing society
The era of the Three Emperors was conservative in many ways: Han Chinese men were required to wear the Manchu hairstyle, in which the front and sides of the head were shaved, and the remaining hair plaited into a braid; society was rigidly hierarchical, and there were strict conventions regarding the conduct of women, laws against homosexuality, and censorship. Yet the country’s economy grew substantially in the early part of the Qing period, thanks to a strong demand in the West for luxury products such as silk, porcelain, and tea.

However, by the beginning of the 19th century, the regime’s repressive treatment of the Han Chinese people, together with famine and widespread addiction to opium—which had been brought into China by European traders—had sent the country into decline. These factors sowed the seeds of rebellions, trading disputes, and wars with European trading partners in the mid-19th century.

The Jesuits in China
In 1540, Ignatius of Loyola, a Catholic theologian from Spain, founded the Society of Jesus—the Jesuits—with the aim of spreading the faith through the teachings of Jesus. The Catholic Church sent Jesuit missionaries to China during the Ming and early Qing periods, and initially they were welcomed. Kangxi was curious about the Jesuits’ knowledge of science (especially mathematics and astronomy) and technology (particularly the manufacture of weapons and pumps). He appointed Jesuits to the imperial board of astronomy, and it was a Jesuit who made the first accurate map of Beijing.

Kangxi gave Catholics freedom of worship in China, and the Jesuits allowed Chinese converts to continue their rites of ancestor worship (they saw these as commemorations of the dead rather than true acts of veneration). However, when a visiting Vatican envoy ruled against the ancestral rites, and the pope followed suit, Kangxi expelled Jesuit missionaries who opposed the practice.
English scientist Isaac Newton published the first edition of his *Mathematical Principles of Natural Philosophy*, or *Principia*, in 1687. The book examines the way objects behave in motion, describes gravity, and explains the movements of planets and satellites. Although it built on the work of earlier scientists such as Galileo, Huygens, and Kepler, the work was revolutionary. By illustrating how the same force—gravity—is responsible for movements both on Earth and in the heavens, it united two scientific realms that had previously been thought separate.

**A lasting influence**
Newton’s use of mathematics-based theory to explain phenomena was part of a wider scientific revolution. English essayist Francis Bacon insisted that scientists test their observations using reasoned argument, and French philosopher René Descartes championed the use of mathematics and logic to address scientific questions. By emphasizing the importance of human reason, such philosophers broke free from the notion that explanations of the physical world depended on Christian faith and church doctrine. This paved the way for the intellectual movement called the Enlightenment, and even for the work of later scientists such as Albert Einstein, who modified and refined Newton’s theories.

In 1768, British navigator James Cook sailed to Tahiti to make scientific observations of the Transit of Venus across the Sun, a rare event that could be seen only from the southern hemisphere. Having recorded the event, Cook sailed on in search of the rumored “unknown land of the South.” He mapped the New Zealand coast, and then traveled northwest, discovering the eastern coast of Australia in the process. Claiming the land for Britain, he named it New South Wales. Working closely with botanists Joseph Banks and Daniel Solander, he also produced unique records of the indigenous peoples, flora, and fauna.

An enduring link
Cook’s voyages were part of a wider tradition of European exploration of the Pacific by navigators such as Dutchman Abel Tasman, after whom Tasmania is named. Cook forged the enduring connection between Australasia and Europe, beginning a process that continued with colonization, the transportation of British convicts into exile, and the founding of cities such as Sydney and Melbourne.

In his later voyages, Cook used the chronometer, newly developed by Englishman John Harrison. It facilitated accurate timekeeping at sea, and so the calculation of precise longitude, which was invaluable to Cook in charting his discoveries.

“...how changed the scene!
Richard Pickersgill, Third lieutenant on the Resolution (1773)
On the death of his chief minister Cardinal Mazzarin, the 23-year-old Louis XIV of France declared that he would now rule alone, as an absolute monarch. During his 72-year reign (1643–1715), Louis dominated his subjects, cultivating the image of a “Sun King” around whom the country orbited. Louis saw his power as God-given, and himself as the embodiment of the state, with the nobility, the middle classes, and peasants dependent on him for justice and protection.

To maintain this position, Louis controlled the historically unruly aristocracy. He compelled them to attend his court, where he dispensed privileges and positions via a system of etiquette. He filled the treasury’s depleted coffers by appointing members of the upper-middle classes to collect taxes in the provinces. Taxation was extensive and the burden fell mainly on the peasantry. Louis’s finance minister, Jean-Baptiste Colbert, whose overhaul of France’s trade and industry helped to make the country Europe’s leading power, increased the efficiency of the revenue system.

Expanding France
Louis’s tax income paid for his court at the dazzling Palace of Versailles, an old hunting lodge extended into a royal palace, and the venue for extravagant entertainments. From 1682 it became the permanent base of the royal court, and the seat of government. Louis also waged a series of costly dynastic wars to make some territorial gains along France’s frontiers, leading the other European nations to form coalitions against him.

Peace was finally achieved at the Treaty of Utrecht in 1713, but brought few gains for France. The country was plunged into debt and opinion turned against the Crown. In spite of this, Louis established a pattern of absolutism in France that lasted, in a more enlightened form, for most of the 18th century until attempts to reform the system resulted in the overthrow of the monarchy in 1792 during the French Revolution.
On September 13, 1759, 24 British men scaled the cliffs below Quebec, opening the way for British forces commanded by General James Wolfe to capture the city. The crucial battle ended French dominance in Canada and was a key event in the Seven Years’ War (1756–1763).

The war involved most of the chief European nations in a struggle for territory and power. It centered on two main clashes: one maritime and colonial, involving land battles in North America and India between Britain and Bourbon France; the other a European land war that chiefly pitted France, Austria, and Russia against Prussia. Overseas colonies also became involved, making this the first true global conflict.

**Competing powers**

Britain achieved notable victories over France. A French invasion attempt on Britain was thwarted by Britain’s superior navy, and Britain scored colonial victories over France in West Africa, the Caribbean, and North America where there were major successes in Canada. Britain forced France to cede all of their territory east of the Mississippi River, effectively ending the threat France posed to Britain’s North American colonies.

There were similar victories in India. The British general Robert Clive, wrongfooted the French by defeating the Nawab of Bengal at Plassey in 1757 and acquiring his territory for Britain, paving the way for the British domination of India.

The end of the Seven Years’ War left Britain the leading colonial power.

FOCUS
The Enlightenment

BEFORE
1517 The Reformation begins, challenging the authority of the Catholic Church.

1610 Galileo Galilei publishes *Sidereus Nuncius* (*Starry Messenger*), containing his observations of the heavens.

1687 In *Principia*, Newton outlines a concept of the universe based on natural, rationally understandable laws.

AFTER
1767 American thinker and diplomat Benjamin Franklin visits Paris, and transmits Enlightenment ideas to the US.

1791 English writer Mary Wollstonecraft adds feminism to Enlightenment ideas in the pioneering *A Vindication of the Rights of Women*.

In the mid 18th century, the French philosopher Denis Diderot invited some of his country’s leading intellectuals—literary men, scientists, scholars, and philosophers to write articles for a huge “Classified Dictionary of Sciences, Arts, and Trades,” for which he was both editor-in-chief and contributor. The first volumes of his *Encyclopédie* appeared in 1751, and the full work was completed 21 years later, made up of 17 volumes of text and another 11 volumes of illustrations.

The *Encyclopédie* was not the first large encyclopaedia to be published, but it was the first to feature content by named authors,
and to give close attention to the trades and crafts. Its most striking feature, however, was its critical approach to contemporary ideas and institutions: its authors were champions of scientific thought and secular values. They sought to apply reason and logic to explain the phenomena of the natural world, and humankind’s existence, rather than religious or political dogma. As such, the work challenged both the Catholic Church and the French monarchy, which derived their authority from traditional ideas such as a divinely ordained, unchanging order.

**A revolution in thought**

The mission of the *Encyclopédie* was to catalog the collective knowledge of the Western world in the spirit of the Enlightenment. This was a multifaceted intellectual movement that took root around 1715, although its origins lay in work done by the pioneers of modern scientific and philosophical thought in the previous century. The work’s multidisciplinary articles, which numbered around 72,000, distilled the ideas and theories of France’s key Enlightenment thinkers—including the writers and philosophers Voltaire, Jean-Jacques Rousseau, and Montesquieu.

The articles were extremely wide-ranging, but centered on three main areas: the need to base society not on faith and the doctrines of the Catholic Church but on rational thought; the importance of observations and experiments in science; and the search for a way of organizing states and governments around natural law and justice.

Diderot organized the *Encyclopédie*’s articles into three main categories: memory (subjects connected to history); reason (philosophy); and imagination (poetry). Controversially, there was no special category for God or the divine—religion, like magic and superstition, was treated as part of philosophy. This approach was groundbreaking, and contentious. Religion had been at the very heart of life and thought in Europe for centuries: the *Encyclopédie*, and the Enlightenment itself, denied it this key position.

In spite of repeated efforts by the authorities to censor some of its articles, and to intimidate and threaten its editors, the *Encyclopédie* became the most influential and widely consulted work of the period. The ideas that it transmitted inspired the revolutions that exploded in France and the US at the end of the 18th century.

**Science and reason**

The Enlightenment movement was characterized by a focus on the power of human reason and skepticism of accepted knowledge. This marked a break from earlier generations in which beliefs about the world derived from religious teachings and the doctrines of the Church. These governed everything from the laws of marriage to the way people understood the movement of the planets and the creation of the universe. For Enlightenment thinkers, however, the evidence of a person’s senses and the use of one’s reason was far more important than their blind »
adherence to a faith. They argued that “truths” about the tangible world, which had been set down in antiquity by Aristotle and others, and upheld by the Church, should be tested through experimentation and observation, checked, and then discussed in a rational way.

This radical mode of thinking had its origins in the scientific revolution of the 17th century. Scientists and philosophers including Francis Bacon, Johannes Kepler, Isaac Newton, and Galileo Galilei had transformed the study of nature and the physical universe, making it more observational. They conducted careful experiments and subjected their results to mathematical analysis; in the process they drastically updated and expanded the fields of physics, chemistry, biology, and astronomy.

Enlightenment scientists took this investigation of reality further, making possible, for example, Swedish botanist Carl Linnaeus’s development of a proper, rational biological classification in the early 18th century. The inquiring, reason-based approach of the Enlightenment also triggered dramatic technological advances. In the 1760s, the Scottish physician Joseph Black discovered carbon dioxide, while in 1769, Scotsman James Watt made improvements to the steam engine that increased its efficiency, thereby enabling the improvement of factories. The Encyclopédie helped to publicize these, and other, achievements of 18th-century scientists, as well as those of their precursors.

The work also found an audience in the learned societies, academies, and universities that flourished in the Enlightenment period. Although many teachers and scholars at Europe’s older, Church-dominated universities remained deaf to the new scientific way of thought, more progressive ones helped to teach and promote it.

**Equality and freedom**

The scientific revolution and the Enlightenment also encouraged the belief that reason could reveal natural laws in human affairs. Instead of drawing fact from faith, Enlightenment thinkers believed that politics should be separated from religion, that neither should curtail the rights of the individual, and that people should be free to express their opinions, worship in their own way, and read what they want to. This political doctrine, which is often labeled liberalism, had roots in the work of 17th-century philosophers such as Englishman

---

**Voltaire**

François-Marie Arouet, who chose to be known publicly by the name Voltaire, was one of the greatest writers and social activists of the Enlightenment, renowned for his wit and intelligence. He was born in Paris in 1694, and spent much of his long life there, although he traveled widely and spoke several languages. He was a hugely prolific writer, producing works in almost every literary genre: novels, plays, poems, essays, historical studies, and philosophical books as well as countless pamphlets.

Voltaire was an outspoken supporter of social reform, including the defense of civil liberties and freedom of religion and speech; he also denounced the hypocrisy of the political and religious establishment. This led to the censorship of some of his work, and also to short spells of imprisonment and periods of exile in England—after which he converted his experiences into an influential book, *Philosophical Letters on the English*—and Geneva, Switzerland, where he wrote his most famous work, the philosophical novella *Candide*.

---

James Watt made improvements to the steam engine that increased its efficiency, thereby enabling the improvement of factories. The Encyclopédie helped to publicize these, and other, achievements of 18th-century scientists, as well as those of their precursors.

The work also found an audience in the learned societies, academies, and universities that flourished in the Enlightenment period. ---

*Scepticism is the first step towards truth.*

**Denis Diderot**

*Philosophical Thoughts (1746)*
John Locke—the father of liberalism. Locke asserted that there are certain intrinsic human rights that are not dependent on law or custom—in other words, they exist quite separately from what the Church or monarch might decree. These rights could be expressed in different ways, but included the right to life, the right to liberty, and the freedom to own what one has produced. These ideas were central to Enlightenment thinkers, following Locke, who felt that such natural rights should form the basis of any system of government.

Liberal ideas also found expression in the work of Enlightenment writers. For example, Voltaire, in books such as the *Philosophical Dictionary*, highlighted the injustices and abuses of the Catholic Church, and espoused values such as tolerance, freedom of the press, and the promotion of reason over doctrine and religious revelation. In his *Spirit of the Laws*, Montesquieu advocated the separation of governmental powers (legislature, executive, judiciary) and pressed for an end to slavery. In *The Social Contract*, Jean-Jacques Rousseau rejected the power of the monarch in favor of that of the people, who, he said, must balance rights with duties, and should be able to decide the laws that govern their lives. The contributors to the *Encyclopédie* also promoted liberal values in economics. They were critical of fairs—where goods were sold by visiting dealers at the expense of local traders, who often had to close their businesses for the duration—and favored markets, which allowed local traders to meet the needs of the local population.

Ideas such as these spread across Europe. Conversations and debates on philosophical, political, and scientific subjects took place in the coffee-houses that had sprung up in English, French, German, and Dutch cities a century earlier. These coffee-houses now served as information-sharing hubs where men from all walks of life, including writers, politicians, philosophers, and scientists, could congregate to exchange views.

**Into the light**

In Europe, the Enlightenment movement, and the *Encyclopédie* itself, which helped promote its ideals, had a profound impact on social, political, and intellectual life. Its proponents believed that they were sweeping away an oppressive medieval worldview and ushering in a new era that they hoped would be characterized by freedom of thought, openness, and tolerance.

The Enlightenment’s questioning, rational approach, and urgent demand for liberty, paved the way for the granting of new civil rights. The movement affected the policies of monarchical rulers, such as the freeing of serfs in the Holy Roman Empire in the 1780s. Monarchs who accepted Enlightenment values took on the movement’s name, titling themselves Enlightened Despots. Enlightenment thought also provided the intellectual fuel for the French Revolution of 1787–99—begun by citizens inspired by Enlightenment notions of individual freedom and equality—and the campaign to abolish the Atlantic slave trade in the 19th century.

Liberalism and other aspects of Enlightenment political philosophy began to influence leaders in many parts of the world when they came to draw up legal systems and to establish rights for their citizens—most notably in the fledgling United States, whose Constitution (1789) adopted Montesquieu’s idea of the separation of power into branches of government.

More generally, the movement promoted the pursuit of knowledge for its own sake and recognized that one person’s quest for understanding could benefit the entire human race.

The rise of Russia

BEFORE

1584 The emperor Ivan the Terrible dies. The following succession of rulers bring greater unity to Russia.

1696 Peter the Great assumes sole rule of Russia.

AFTER

1709 Russia wins a decisive victory over Sweden at the Battle of Poltava.

1718 Peter’s son Alexis, opposed to his father’s reforms, dies under torture.

1721 Russia and Sweden sign the Treaty of Nystad, pledging mutual defence.

1725 Peter the Great dies, ushering in an era of less competent emperors.

1762 Catherine the Great becomes empress and continues Peter’s work of reform and expansion.

Russian ruler Peter the Great founded St. Petersburg, on the estuary of the River Neva, on May 27, 1703. This new city, fortress, and port by the Baltic gave Russia direct sea access to Europe, opening new opportunities for both trade and military conquest. In 1712, Peter made his new city Russia’s capital, stripping the title from the ancient seat of Moscow.

An admirer of Western palaces, Peter employed European architects to design the government buildings, palaces, university, and houses in the fashionable baroque style. He also pressed 30,000 peasants each year into construction gangs, along with Russian convict laborers and Swedish prisoners of war. The regimen was strict, and living conditions stark: more than 100,000 workers died, but those who survived could earn their freedom.

St. Petersburg offered a new vision for the country. Its strategic location facilitated trade, its ethos encouraged education, and its architecture provided a showcase for Russian achievement. The lavish design and vast scale of Peter’s architecture showed not only his appreciation of European culture, but also his determination to be an exalted, absolute ruler in the manner of Western despots such as Louis XIV. Peter used his power to make significant changes in

Russia. He founded the Russian navy and reformed the army, which until then had relied on bands of men led by untrained village elders. He reorganized the army along European lines and developed new iron and munitions industries to equip it. By 1725, Russia had a professional army of 130,000 men.

**A new and modern culture**

Peter transformed his court, making his courtiers adopt French-style dress instead of traditional robes, and ordering them to cut off their long beards. He founded colleges, forced the nobility to educate their children, and promoted people to high rank according to their merit rather than their birth, as had previously been the case.

The emperor was also known for his harsh treatment of rebels, his aggressive foreign policy, and particularly for his successful war against Sweden, which gave him control of the Baltic Sea. This style of rule was continued under later monarchs, notably Catherine II, also “the Great,” who extended the modernizing trend Peter had begun. Influenced by the ideas of the European Enlightenment, she promoted education and the arts, sponsored translations of foreign literary works, and wrote books herself. She too increased Russia’s imperial strength, gaining military victories over the Ottoman Empire.

The rulers were also influenced by the example of Prussia, a north-German state that expanded in the 18th century due to an efficient bureaucracy, a powerful army, and strong leadership under kings such as Frederick II. Between Prussia and Russia lay Poland, whose territories these two powers and Austria carved up and took over in a series of partitions. This left Russia with influence over an area stretching from Eastern Europe to Siberia that it still largely retains today.

**Peter the Great**

Peter (1672–1725) became ruler of Russia in 1682, at first jointly with his half-brother Ivan as co-tsar and their mother as regent, and then as sole monarch. Well-educated and constantly curious, Peter travelled to the Netherlands and England to learn about Western life, government, and architecture. He also studied disciplines such as shipbuilding and woodworking, and practised many with distinction. His rule was greatly influenced by these travels and by Western advisers, leading him to carry out military reforms and adopt a dictatorial style of rule. The position and grand architecture of his new city illustrated how his focus had been directed towards Western European culture and power.

Although Peter forged lasting diplomatic ties with Western Europe, he failed in his attempt to form a European alliance against the Ottomans. He was more successful in his war against Sweden, his reforms, and in establishing himself as emperor of a vast empire and monarchy that survived until the revolution in 1917.
FURTHER EVENTS

THE FOUNDING OF THE SAFAVID DYNASTY, PERSIA (1501)

The Safavid dynasty rose to power under Shah Ismail I, a leader of the Twelver School of Shia Islam, which believes in 12 imams as successors to the prophet Muhammad. In a series of military campaigns lasting until 1509, Shah Ismail conquered Persia (now Iran) and areas of Iraq, in the name of Shia Islam. His son, Shah Tahmasp (r. 1524–76), defended these lands against the neighboring Ottoman empire, whose rulers followed the opposing Sunni School of Islam. The Safavid dynasty established strong Shia rule in Persia, created an efficient government and bureaucracy, and lasted until 1736.

CHARLES V BECOMES HOLY ROMAN EMPEROR (1519)

One of the most powerful European monarchs as Hapsburg king of Spain and ruler of Burgundy and the Netherlands, Charles V was elected Holy Roman Emperor in 1519, bringing much of central Europe and northern Italy under his rule. This gave him unprecedented power but also brought challenges from the empire’s neighbors—France on one flank and the Ottomans on the other—and from Protestants within his territories. When Charles abdicated, the Spanish crown passed to his son Philip and the title of emperor to his son Ferdinand.

HENRY VIII BREAKS WITH ROME (1534)

English king Henry VIII faced a dynastic crisis: he needed a male heir to ensure the succession, but he and his wife, Catherine of Aragon, were unable to produce one. Henry wanted to divorce Catherine, but the Pope refused him permission to do so. In response, Henry cut off ties with Rome and declared himself head of the church in England. Although under Henry the English church remained largely Catholic in doctrine and practice, the king’s move paved the way for England’s later acceptance of Protestantism. In addition, Henry dissolved the monasteries, which brought him a new source of land and wealth, and removed a key link with the Roman Catholic church.

CARTIER EXPLORES CANADA (1534–42)

French navigator Jacques Cartier explored the northern coast of Canada and Newfoundland, sailing up the St. Lawrence River as far as what later became Montreal. Although he did not establish a colony there, Cartier sparked the French interest in Canada, and his explorations were crucial when French travelers began to found settlements there and make claims on the land in the 17th century. Canada has had a significant French heritage ever since.

THE START OF THE DUTCH REVOLT (1568)

In 1568, the Protestant northern provinces of the Netherlands rebelled against their Catholic ruler, Philip II of Spain, and declared their independence, beginning an 80-year period of war before their Republic was recognized. Philip had imposed his Catholic beliefs uncompromisingly on his Dutch subjects, so many Protestants from the southern Netherlands, which remained loyal to the crown, moved north. This influx helped the Republic, which soon grew into a financially and culturally stable nation thanks to sea trade, scientific progress, and impressive artistic achievements.

THE ST. BARTHOLOMEW’S DAY MASSACRE (1572)

In 16th-century France, violent clashes, and, from 1562, civil war, erupted between Catholics and Protestants. One of the worst episodes took place in 1572, when the Protestant claimant to the French throne, Henry of Navarre, was married in Paris and several thousand Protestants were massacred. After Henry became king of France, he issued the Edict of Nantes in 1598, ordering religious tolerance. However, the edict was revoked in 1685 by Louis XIV, who ruthlessly oppressed France’s Protestant population;
under his reign many Protestants were imprisoned and many others fled from the country.

THE SPANISH ARMADA (1588)

In 1588, the Catholic monarch Philip II of Spain attempted to conquer Protestant England by sending a fleet of 130 ships to invade the country. After the English succeeded in destroying part of the fleet using fire ships, a defeat at Gravelines sent the remains of the Spanish Armada retreating northward toward Scotland, where many more ships were wrecked by storms. Only 86 vessels made it back to Spain. The defeat was a blow to Spain, ending this campaign to capture England for Catholicism and confirming England’s status as a secure Protestant nation under Elizabeth I.

THE JAPANESE INVASIONS OF KOREA ARE DEFEATED (1592–98)

The Japanese samurai leader Toyotomi Hideyoshi launched attempts to conquer Korea in 1592 and 1597, part of a larger campaign that was intended to culminate with an invasion of China. Both times, Japan made major advances, but the Koreans, with the support of Chinese forces, managed to fight back. However, they were unable to expel the Japanese completely, which led to a stalemate on land, although Korea’s Admiral Yi inflicted frequent naval defeats on Japan. Beaten at sea and confined to a few fortresses on land, Japan abandoned its attempts to invade.

THE SIEGE OF DROGHEDA (1649)

England’s parliamentarian leader Oliver Cromwell launched his campaign to conquer Ireland in 1649, after Irish Catholics took control of the country from its English administrators in 1641. Once Cromwell had taken Dublin, Drogheda became a base for Irish Catholic leaders. Cromwell laid siege to the town, massacring the people inside its walls when they refused to surrender. Most of the garrison of about 2,500 men, plus many civilians, were killed. Although the killings did not break the military code of the time, their ruthlessness and the sheer number of victims were both unprecedented, and they embittered future relations between the English and the Irish Catholics.

THE DUTCH ESTABLISH A COLONY AT CAPE TOWN (1650)

Although Portuguese explorers were the first Europeans to discover the Cape of Good Hope in the 15th century, it was the Dutch who founded Cape Town. In 1652, a group from the Dutch East India Company under Jan van Riebeeck established a colony there, creating a stopping point for Dutch ships on their way to and from Asia. The settlement became the center of a large community of people of Dutch origin, who dominated trade and agriculture in the region, evolved their own language—Afrikaans—and played a central role in the history of South Africa.

THE OTTOMAN SIEGE OF VIENNA (1683)

By 1683, the Turkish Ottoman Empire was at its greatest extent and included large areas of North Africa, the Middle East, and Eastern Europe. Austria was on the empire’s western border, and the Turks had already attempted to conquer Vienna. In 1683 they besieged the city for the last time: the forces of the Habsburg-ruled Holy Roman Empire and of Poland came to defend Vienna, and the Ottomans were vanquished. From this point on, the Ottomans’ power declined. No longer a threat to Christian Europe, they steadily lost their European territories.

THE BATTLE OF CULLODEN (1746)

At the Battle of Culloden, Scotland, an army being led by the Duke of Cumberland, son of the Hanoverian king George II, defeated a smaller force of Jacobites (including many from the Highland clans) under Prince Charles Edward Stuart. The Stuart prince had hoped to restore his bloodline to the British throne, but Culloden effectively put an end to his campaign. It also led to the disarming of the Scottish Highlands, where Jacobite support was strongest, the dismantling of the clan system there, and a ruthless suppression of Highland culture that included bans on wearing Highland dress and speaking Gaelic.
CHANGING SOCIETIES
1776–1914
From the late 18th century, history took on a perhaps delusory air of “progress.” Change accelerated and seemed to have a clear direction. The world population exceeded 1 billion in 1804 and was approaching 2 billion by 1914. This growth was made possible by tremendous increases in economic output. Agriculture became more efficient and large areas of new land were put to productive use. The exploitation of new sources of energy—especially steam power—the application of new technology, and organized industrial production in factories revolutionized the manufacture of commodities. Railways made it possible for humans to travel faster than a horse for the first time and cities expanded—for instance, the population in London increased from 1 million in 1800 to 7 million in 1910. Improvements in public health and medicine increased life expectancy in the most advanced countries.

**Human rights and equality**
Despite these advancements, it is debatable whether progress was detectable in the quality of life. At the start of this period, political revolutions in America and France enunciated principles of human rights and equal citizenship that radically challenged the existing order of society. By the early 20th century, liberals and democrats in Europe and North America could look with some complacency upon successes such as the widespread expansion of voting rights, the abolition of slavery, and freedom of speech. However, women remained mostly excluded from voting, and there was no economic equality. Extremes of wealth and poverty polarized the world’s wealthiest and most advanced societies, and conditions of life for industrial workers were often very miserable. Artists and intellectuals of the Romantic movement criticized the impact of mechanized industry on people and the environment, while socialist movements looked forward to further revolutions that would end the exploitation of man by man and create egalitarian societies.

**Western imperialism**
The most obvious losers in the new world order created by industrial capitalism were the inhabitants of countries at the periphery of the global economy. The industrializing countries of the West, needing places to invest their excess capital,

---

Raw materials for their factories, and markets for their new products, found them in Asia, Africa, and Latin America. They also sought land for their expanding populations to settle in thinly populated zones such as the North American plains and Australia. Peoples who stood in their way were swept aside. The Europeans started expanding the areas under their direct rule or control. The British takeover of the Indian subcontinent, more or less complete by the mid-19th century, was the most spectacular example of imperialism in action, and Sub-Saharan Africa was divided among the European powers as if the local population did not exist.

The world’s response to Western imperialism was mixed. Resistance was widespread in the form of wars and uprisings against European dominance. On the other hand, the growing superiority of the West in technology, science, military power, and social organization led several non-European governments to try to modernize based on the Western model. In the Muslim world, Egypt, Turkey, and Iran attempted, with only partial success, to pursue a modernizing agenda. In East Asia, Japan successfully transformed itself into an efficient modern state, becoming an imperialist power in its own right. China, by contrast, experienced turmoil and invasion, and imperial rule collapsed in the early 20th century.

**Rising nationalism**

Most Europeans and people of European descent gloried in a sense of their own racial and cultural superiority to the rest of the world, but Europe remained a deeply divided continent. Militant nationalism, unleashed by the French Revolution, was a threat to stability. By 1815, the Napoleonic Wars had generated battles of unprecedented scale. After the wars of the mid-19th century that created a unified Italy and Germany, the great powers maintained large conscript armies and formed mutually hostile alliance systems. These armies were equipped with high-explosive shells and rapid-fire weapons.

European military power, which was supported by highly organized state systems and economies, was certainly one of the key elements in European world domination. There would be disaster when European states turned this power against one another. ■

The American Revolution

BEFORE
1773 Boston Tea Party protests tax on tea imports.
1775 Armed clashes take place between patriot militia and British forces.

AFTER
1777 British defeat at Saratoga persuades France to support the American rebels.
1781 The British surrender at Yorktown, Virginia.
1783 Britain recognizes American independence.
1787 Drafting of the Constitution begins.
1789 George Washington is elected as the first president of the United States.
1790 The US Constitution is ratified.

There has been no more daring assertion of statehood than that proclaimed by the Declaration of Independence, adopted by the Second Continental Congress on July 4, 1776 and signed by all 56 delegates present. What would become the United States consisted of 13 British colonies, steadily established since the 17th century, and scattered along the east coast of North America. They were not just geographically remote from their mother country; most were also geographically remote from each other. Their economies were fragile, and they had no coherent political identity—citizens of
Virginia considered themselves to be Virginians, for example, not Americans—beyond an increasingly strained loyalty to the British crown.

However, the colonies were also remarkably self-aware and acutely conscious of Enlightenment notions of political liberty, and they were concerned that their freedom would come under threat as a result of British rule. Unable to assert their own natural rights, and subjected to what they considered unreasonably imposed taxes, the colonists questioned why a distant parliament and a distant king should impose their will on them. Impelled by a series of exceptional leaders, in 1776 they not only rejected British authority, but they set about establishing an entirely new kind of state in which government would derive from “the consent of the governed.” This explosively novel idea would lead to the creation of a new and enduring republican government.

Support for a formal assertion of American independence was far from universal in the colonies, however. Five states in particular—New York, New Jersey, Maryland, Delaware, and Pennsylvania—feared it would damage trade and, if unsuccessful, provoke harsh reprisals from Britain. In the same way, as many as 500,000 of a population of 2.5 million remained loyal to the British crown to the end of the conflict, many subsequently settling in Canada.

**The conflict takes shape**

It would take a drawn-out and bitterly fought war to make independence into reality. Britain was determined to assert what it saw as its legitimate rule, while the hastily assembled forces of the nascent United States were no less determined to assert what they saw as their right to independence. The two modest armies—Britain’s, because of the difficulties of sending forces en masse to America; the colonists’, because they consistently lacked the means to raise and equip any substantial fighting force—confronted each other in a series of minor engagements over six years.

At their peak, the American forces numbered scarcely 40,000 and had almost no navy at all. Britain deployed about the same number of soldiers but in addition had a vastly greater number of ships. In 1778, however, France declared support for the colonists and sent 5,000 troops and a substantial fleet. Facing certain »
defeat, in October 1781, the British surrendered at Yorktown, Virginia. The war would not formally end for another year, but in every important respect, the colonists—and their French allies—had dealt a huge blow to their British masters.

The French involvement in the creation of this new nation owed everything to a desire to reverse the humiliations of the Seven Years’ War. But the debts incurred would, ironically, be among the many causes of the bankruptcy of the French crown that led to the French Revolution in 1789. There was a profound irony, too, in absolutist France seeking to win Americans the freedoms that it was unwilling to accord its own citizens.

**Revolutionary ideals**

At the heart of the American Revolution was the new political philosophy encapsulated by the Declaration of Independence. It was the work of a distinctly patrician Virginian, a haughty, wealthy slave-owner named Thomas Jefferson. He was one of a committee of five charged with writing the Declaration, yet the two drafts it went through in June 1776 were almost entirely his own. It is hard to overstate the importance of the Declaration of Independence. It made, for the time, an astonishing claim: “that all men are created equal.” It further claimed “that governments are instituted among men deriving their just powers from the consent of the governed.” These were actively seditious sentiments that neither George III of England nor Louis XVI of France could have any sympathy with. They nonetheless formed the bedrock of what would become the United States and, indeed, liberal political systems across the Western world. These political creeds, derived from the work of British and French Enlightenment thinkers, led to the creation of the first modern state and, in doing so, changed the world.

**The destiny of America**

Jefferson remains an enigma. He loathed monarchy yet loved pre-Revolutionary France, where he was the United States’ first ambassador, delighting in its civilized elegance. He claimed to despise high office yet served two terms as President of the United States. And, as president, in 1803 he drove through the Louisiana Purchase, which saw a vast area west of the Mississippi transferred at a bargain price from France, its nominal ruler, to the United States.
He understood that the destiny of the US lay in its colonization of the vast lands to the west, he assented to the notion that its indigenous inhabitants should be driven off, and he owned slaves. “Blacks,” he asserted, “are inferior to the whites in the endowments both of body and mind.” Whereas George Washington, also a patrician Virginian, freed his slaves, Jefferson opted not to.

None of this, though, can diminish Jefferson’s significance in articulating notions of liberty that resonate today. And even though he felt slavery was wrong, his personal belief was that emancipation would be bad for both slaves and white Americans—unless they were returned to Africa.

**A new constitution**

Although Jefferson can readily be considered the guiding spirit behind the Declaration of Independence, he played no formal role in the drawing up of the next great document that shaped the nation: its Constitution. The United States was legally able to assert its independence from Britain in 1783. But for the next four years, it existed in an increasingly unstable political vacuum, its fate decided by an ever-more divided Confederation Congress, meeting variously in Pennsylvania, New York, and New Jersey.

There were serious reasons to believe the new nation might fail, torn apart by those arguing for the primacy of the rights of the individual states over the central government, and those in favor of a strong central government or even the creation of an American monarchy. In the spring of 1787, a Constitutional Convention took place in Philadelphia. The written, formalized Constitution proposed would not be provisionally ratified until June the following year, and then only after prolonged disputes. The result was an assertion of a new form of government. It was both a bill of rights and a blueprint for an ideal government, whose three branches—executive, legislative, and judiciary—would keep each other in check. It would have a profound influence on that issued in Revolutionary France in 1791 and remains a model of its kind.

**“Unfinished business”**

The founding fathers were rightly optimistic about the United States’ potential, but they had failed to resolve one crucial question. Jefferson’s first draft of the Declaration of Independence called slavery “an execrable commerce” and “a cruel war against human nature itself.” However, to placate the slave states of the south and the slave traders of the north, these radical statements were later dropped. Almost 90 years later, it would take a civil war and 620,000 dead to end the practice and complete what Abraham Lincoln saw as the “unfinished business” of the Declaration of Independence and the Constitution.

---

**George Washington**

Born in 1732, George Washington served the British crown with distinction during the Seven Years’ War (1754–61) against France. He represented Virginia in the House of Burgesses and in the Continental Congresses of 1774 and 1775. With the outbreak of the Revolutionary War, he was the unanimous choice to lead the Continental Army, which he did with imagination and great fortitude, especially in the very difficult early years of the conflict: his “skeleton of an army,” under-equipped and close to starving, was forced to endure an exceptionally harsh winter in 1777–78 at Valley Forge in Pennsylvania. From 1783, Washington sought to establish a constitutional government for the new nation. The nation’s first president, he served two terms, retiring in 1797 in the face of increasing disputes between Jefferson’s Democratic Republicans and the Federalists, who were led by the quick-tempered Alexander Hamilton. Washington died in 1799 and was buried at his Virginia plantation, Mount Vernon, overlooking the Potomac River.
SIRE, IT’S A REVOLUTION
THE STORMING OF THE BASTILLE (1789)
On July 14, 1789, an enraged Parisian mob, seeking weapons to defend their city from a rumored royal attack, stormed the crumbling fortress known as the Bastille and murdered its governor and guards. This violent defiance of royal power has become the symbol of the French Revolution, a movement that not only engulfed France but also reverberated around the world. The ideas articulated in the revolution spelled the beginning of the end for Europe’s absolute monarchies and inspired their eventual replacement by more democratic governments.

The French Revolution originally set out to sweep away aristocratic privilege and establish a new state based on the Enlightenment principles of liberté, égalité, and fraternité. But although it was introduced by a surge of optimism, the revolution soon degenerated into a violence that played out over several years and that would be brought to an end only by the dictatorship of Napoleon Bonaparte. It remains a story of confusion and chaos, of a collision between a privileged old order, the ancien régime, and a new world that struggled, often violently, to create a coherent new order.

**A country in disarray**
The French king, Louis XVI, well meaning but indecisive, was hardly the man to confront any crisis, let alone one as grave as that facing France in 1789. In the previous century, his great-great-great-grandfather Louis XIV, the Sun King, had established France as an absolute monarchy, with all power concentrated in the king’s hands, and his palace at

**Enlightenment thought** establishes a belief in a *new political order* based on *liberty*.

**A political crisis** arises in France, and the *overthrow of the old order* seems suddenly possible.

**The Bastille prison** is attacked by a *violent mob*.

**A sustained period of instability, rioting, civil war, and state-sanctioned executions** follows.

**Attempts are made to construct a *new society*: the monarchy is abolished and a *republic declared*.
The storming of the Bastille symbolized the start of the French Revolution. The prison held only seven prisoners in July 1789, but its fall had great importance.

Versailles as the most sophisticated court in Europe and a bastion of aristocratic privilege.

Louis XVI thus ruled over a country where nobles refused to surrender any privileges, and taxes were paid almost exclusively by an oppressed peasantry: France was effectively bankrupt. In the late 18th century, France’s population was expanding rapidly, but unlike England, France had not had an agricultural revolution and remained particularly vulnerable to any failure of the harvest, as happened in 1787 and, again, in 1788. These desperate summers were followed in 1788–89 by a bitterly harsh winter, leading to mass starvation.

The king’s response
The financial crisis critical, Louis was desperate to raise further funds while preserving his authority, so he summoned what was called the States General, a semi-parliamentary body that had last assembled in 1614. It consisted of clergy, the first estate; nobles, the second; and the commons (essentially a kind of bourgeoisie, lawyers predominating), the third.

The States General met at Versailles on May 5, 1789. Almost instantly, the nobles and clerics tried to assert that their votes should be worth more than those of the commons. In response, on June 17, the commons declared itself a National Assembly, vesting power in itself instead of the crown. In August, with peasant uprisings across rural France, the Assembly abolished feudal taxes and aristocratic privileges and issued what it called the Declaration of the Rights of Man, a statement asserting fundamental freedoms.

In October 1789, events were suddenly accelerated when a vast crowd, outraged by the lack of bread in Paris, descended on Versailles and forcibly removed the royal family to Paris, ransacking the palace for good measure. In what would become an unnerving foretaste of the violence to come, the severed heads of the guards at Versailles were paraded on stakes as Louis and his family were escorted to the capital.

It had been comparatively easy to overthrow the existing royal government, but it would prove infinitely harder to establish a new government. It was presumed that a kind of constitutional monarchy would be the most obvious solution. In the event, France found itself wrenched between those arguing for this more or less moderate option, and those in favor of a much more radical republican alternative.

The First Republic
Although in most important respects Louis’s reign seemed by now to be doomed, the king had not entirely »
abandoned hope of reasserting his authority. Large numbers of French aristocrats—emigrés—had already fled France, fearing the revolution had made it unsafe. In trying to persuade other European regimes—Austria above all, whose emperor was the brother of the French queen Marie-Antoinette—they stirred up opposition to the revolution, but their principal impact was to reinforce a determination in France to see the revolution succeed.

In June 1791, Louis attempted to escape, but was intercepted near the border with the Low Countries and brought back to Paris to the jeers of the increasingly violent, politicized common folk, the sans-culottes, their name a reference to their striped, baggy trousers. There was an increasingly hostile stand-off between political factions in Paris, such as the Girondins and more extremist Jacobins, which attracted the support of the sans-culottes, and the French government.

An external threat
Whatever the obvious instability, progress toward a new social order was being made. In September 1791, a constitutional monarchy was proclaimed. Similarly, the church’s privileged position was forcibly ended, though this, too, provoked lasting upheaval and violence. Equally critically, the freedom of the press was asserted.

At the same time, revolutionary France faced an external threat from Austria and Prussia, both determined to reassert the primacy of hereditary monarchy and to forestall revolutionary tendencies in their own countries. In April 1792, France declared war on both, a war that would continue, in different guises, for 23 years. By August, the combined Austrian and Prussian forces were within 100 miles (160km) of Paris.

A kind of hysteria gripped the city. A mob stormed the Tuileries, where the royal family was held, slaughtering its Swiss Guards. The following month, a further round of killings, the September Massacres, was unleashed against anyone suspected of royalist sympathies. September 1792 also marked the establishment of the directly elected National Convention and of the First French Republic. Almost its first act was to put Louis XVI on trial as a traitor. In January 1793, he was executed, an early victim of the guillotine, championed as a humane and egalitarian means of death.

The sense of crisis continued to grow. In April 1793, the Committee of Public Safety was created to safeguard the revolution. For a year or more, under the chairmanship of a provincial lawyer, Maximilien Robespierre, the most influential of the now-dominant Jacobins, it would effectively become the government of France. Its impact on France, however short-lived, was devastating. This was the Terror. Counter-revolutionary movements across the country were ruthlessly suppressed, most obviously in the Vendée region of the southwest, where up to 300,000 died. Churches proved particularly rich targets. The Terror’s victims were less likely to be remaining aristocrats and more anyone Robespierre suspected of impure thoughts, including almost all of his political opponents.

Louis XVI was executed in 1793. Using the guillotine as the only means of execution for all people—royals and paupers alike—was meant to reinforce the revolutionary principle of equality.
The French Revolution set out with the idea of building a new state that would take the Enlightenment principles of liberty, equality, and brotherhood as its foundation.

Robespierre’s single-minded pursuit of revolutionary purity reached an improbable climax with his creation in 1794 of a new religion, the Cult of the Supreme Being. It was intended as a focus of, and spur to, patriotic and revolutionary virtues, the superstition of the Catholic Church replaced by a belief dedicated to reason celebrating the natural laws of the universe. The megalomania it suggested contributed significantly to his sudden downfall, and at the end of July 1794, Robespierre was put to the guillotine.

Order restored
With the end of the killings—more particularly with the establishment of yet another government, the Directory, at the end of 1795—order of a sort was restored. Tellingly, it was achieved in part by the Directory’s willingness to use force against the Paris mob, ordered by Napoleon Bonaparte, then a young general in the revolutionary army.

Furthermore, France’s armies, boosted by mass conscription, were reversing early defeats, apparently poised to carry the revolution into new territories. Emboldened, France reinforced its assertion of what it claimed were its “natural frontiers” on the Rhine, which in reality meant an audacious extension of French rule into Germany. By 1797, it had inflicted crushing defeats over Austria in the Low Countries and in northern Italy. France was ready to re-assert what it saw as its natural primacy in Europe.

Historical significance
Whatever the importance of the French Revolution, it remains the subject of continuing and intense historical debate. Its notional goals were clear: the ending of repressive monarchy and entrenched privilege; the establishment of representative government; and the championing of universal rights. But the reality was confused and often violent.

Furthermore, by 1804 Napoleon had effectively swapped one form of absolutism for his own, albeit one vastly more effective than any France had known since Louis XIV. Yet the revolution’s consequences reverberated well into the 20th century. It remains a pivotal moment in the belief that freedom should underpin the civilized world.

Maximilien Robespierre
Robespierre (1758–94), a lawyer and a member of the third estate in 1789, was the chief architect of the Terror that gripped France between September 1793 and July 1794. He was a consistent champion of the dispossessed, as well as a remarkable orator, capable of astonishingly intense speeches that electrified his supporters and opponents alike. He was also a fierce opponent of the Revolutionary Wars, believing that a strengthened army risked becoming a source of counter-revolutionary fervor. Initially, at least, he was also opposed to the death penalty. His change of mind was startlingly absolute. When persuaded that terror was the most effective means of preserving the revolution, he embraced it implacably, arguing that it was the natural handmaiden of the virtue he felt should drive the revolution. He remains the original, chilling model for all those who have since championed state violence in the interests of a supposed greater good.
Napoleon’s defeat at the Battle of Waterloo, south of Brussels, on June 18, 1815 marked his final overthrow as Emperor of the French, ending 23 years of European warfare. It was an epic encounter, fought on rain-soaked ground, in which 118,000 British, Dutch, and Prussian forces finally prevailed over a French army of 73,000, hastily assembled by Napoleon. France’s Revolutionary Wars, which began in 1792, had been launched to extend Revolutionary principles to neighboring states and to defend France against its enemies. Under Napoleon,
they became, in effect, wars of conquest, despite being waged in the name of the Revolution.

**A continent reshaped**
During the Revolutionary Wars, France had established sister republics in northern Italy and the Low Countries; under Napoleon, many of these were reformed into kingdoms, whose monarchs came from the Emperor’s family. States across Germany were carved up, at the expense of Prussia, to become a French puppet state, while the 800-year-old Holy Roman Empire was abolished. From 1807, much of Poland was controlled by the French as the Grand Duchy of Warsaw. These were states recast on French lines: clerical power was reduced, serfdom abolished, and aristocratic privilege ended. But such reforms provoked inevitable resentments.

Napoleon’s conquests were the result not just of military genius but also of greatly enlarged French armies. Conscription, introduced in 1793, swelled the French army from 160,000 men to 1.5 million.

Only Britain, protected by the English Channel, remained undefeated, its position as the world’s leading maritime power underscored by victory at Trafalgar, off southern Spain, in 1805. But maritime muscle alone was not enough to beat Napoleon. Britain’s most significant role was financing the endlessly shifting alliances confronting the French.

In response, Napoleon imposed the Continental System, which forbade trade between continental Europe and Britain. However, Portugal and Russia continued to trade with Britain, prompting Napoleonic invasions in 1807 and 1812 respectively.

Resistance to Napoleonic rule was mounting; the Spanish began a brutal guerrilla war that drained French resources and came to be referred to by Napoleon as the “Spanish ulcer.”

**The final defeat**
Napoleon had bred a sense of French invincibility, and this made his eventual defeat all the more traumatic for the nation. Of the 450,000 men he led against Russia in 1812, barely 40,000 survived.

Napoleon had overreached himself. At Leipzig, Germany, in 1813, outnumbered three to one by forces from Austria, Prussia, Russia, and Sweden, he suffered his first major defeat. By Waterloo, his forces had recovered slightly, and the ratio was only two to one, but Napoleon’s military genius failed to redress the balance and his imperial ambition ended in the Waterloo mud.

**All Frenchmen are in permanent requisition for the services of the armies.**

*Declaration of Conscription, 1793*
LET US LAY THE CORNERSTONE OF AMERICAN FREEDOM WITHOUT FEAR. TO HESITATE IS TO PERISH
BOLÍVAR ESTABLISHES GRAN COLOMBIA (1819)

The establishment in 1819 of the Republic of Colombia, or Gran Colombia as it came to be known, by Simón Bolívar, the self-styled Libertador, marked a pivotal moment in the emergence of an independent Latin America.

By 1825, the continent had successfully ended almost 300 years of Spanish and Portuguese rule. In Brazil, which won its independence in 1822, the process was relatively easy and also largely bloodless. Elsewhere, it was complex, long, drawn out, and violent. It was a reflection of societies comprising a teeming range of classes and races—ruling Europeans, native...
Indians, black people, and those of mixed race—that were never likely to produce coherent political wholes. Plagued by bitter disputes, the short-lived republic of Gran Colombia would break up in 1830.

**Brazilian independence**

Though partly influenced by the liberal doctrines of the American and French revolutions, the drive to independence in South America was seldom the product of a desire for social justice or representative government. Aside from two abortive Mexican revolutions in 1810 and 1813, it was a struggle for supremacy between ruling elites, none of which had much interest in the kind of social change—society recast on liberal principles—that underpinned the French Revolution. That said, this drive was also significantly affected by the Napoleonic Wars. Napoleon’s invasion of Portugal in 1807 forced the Portuguese king, João VI, and his court to flee to safety in its Brazilian colony. João remained there even after the fall of Napoleon in 1815, returning to Portugal only in 1821. However, his son and heir, Pedro, stayed in Brazil.

As in Spain’s Latin American colonies, Brazil was dominated by a land-owning elite, a great many of whom, over many generations, had been born in South America.

**Simón Bolívar**

Born in Caracas, Venezuela, in 1783, Simón Bolívar came from one of the oldest and wealthiest noble families in the city. His education was completed in Europe, where he absorbed the republican ideals of the American and French revolutions. The idea of independence for Hispanic America accordingly took root in his imagination.

His revolutionary career began with an abortive uprising in Caracas in 1810. In 1814, the charismatic Bolívar declared himself “liberator” and head of state of the new republic of Venezuela. In 1817, he staged a daring invasion of Colombia and went on to complete the conquests of Ecuador and Peru in 1824. Bolívar’s dream was to unite all of South America—except Argentina, Brazil, and Chile—in a single great republic. However, his dictatorial tendencies and the brutality of his armies eventually led to dissent and the fracturing of Gran Colombia in 1830, the year of his death.
They came to resent the fact that ultimate authority was exercised by a distant monarchy, and saw no reason why they should submit to it.

There are clear parallels with the American Revolution. But while in North America it was the fundamental liberties of free-born men that were disputed, in Brazil the issue was narrower—it was simply a question of who would govern.

In 1822, to protect the interests of the native-born elite, Pedro declared Brazil an independent constitutional monarchy and himself its emperor. This was a revolution only in the sense that it produced Brazilian independence in the interests of those already ruling it. One of the more obvious consequences was that, with no change to the social or economic order, slavery remained legal in Brazil until 1888, later than anywhere else in the Western world.

**Governing Spain’s colonies**

In Spain’s colonies, the drive for independence stemmed partly from the desire of the native-born ruling class—the creoles—to assert their interests, not least in the face of Spain’s restrictive control of South American trade and punitive taxation policies, both to the disadvantage of the colonies. In the short term, however, it was a reaction to Napoleon’s invasion of Spain in 1808 and his deposition of the Spanish king, Ferdinand VII, in favor of Napoleon’s brother, Joseph. In effect, Spain’s colonies no longer had a legitimate ruler of their own, so it was their plain duty to become rulers themselves, at least until the monarchy could be restored.

While South American liberals saw Joseph as the harbinger of a new, more just social order in place of the absolutism of Ferdinand VII, monarchists in the colonies saw any such liberalizing tendencies as inherently destabilizing. The seeds of internal conflict were being sown.

**Social revolution in Mexico**

At the time, Mexico, which was known as the Vice-Royalty of New Spain, encompassed an immense area that extended almost from present-day Wyoming to Panama and that included most of Texas. Events there took a different turn. In 1810, a priest, Miguel Hidalgo, appalled at the obvious inequalities of Mexico, led a popular revolution that ended the following year in its brutal suppression and Hidalgo’s execution. Another popular uprising led by a second Catholic priest, José Morelos, between 1813 and 1815 was similarly put down. When, in 1821, Mexico did gain independence, it was by force against more or less token Spanish resistance, and under the leadership of Augustín de Iturbide, a Mexican general who proclaimed himself emperor of Mexico the following year. His rule lasted less than a year. By 1838, Mexico had lost all its Central American territories, and by 1848, it had lost all its North American territories.

**Gran Colombia**

Events in Spanish South America—which included the triple Vice-Royalties of New Granada, Peru, and Rio de la Plata—followed a very different course. The key figure here was Simón Bolívar. Born in modern-

> For my blood, my honour, my God, I swear to give Brazil freedom.

**Future Emperor Pedro I of Brazil (1822)**

Pedro I of Brazil, whose coronation is illustrated in this painting by Jean-Baptiste Debret, was the son of the king of Portugal. He had been left in Brazil to rule as regent.
The Battle of Ayacucho (1824) saw the defeat of the Spanish army at the hands of the South American liberation troops. It marked the end of Spanish rule in Peru and in South America.

Bolívar was an idealist and a passionate opponent of slavery. He believed in the kind of nationalism already surfacing in Europe, with the independence of Greece and the following year, of Belgium. More particularly, it was due to a failure to agree on the future of Gran Colombia. There were disputes over whether its government was to be liberal, conservative, or authoritarian. Venezuela, in particular, was subjected to bitter wars throughout the 19th century that cost the lives of an estimated 1 million people.

This lack of direction resulted in instability and a social inequality that would persist for a century or more. It would also produce a series of authoritarian military leaders acting in the interests of the landowners. An inevitable consequence was a persistently oppressed underclass, urban and agricultural, black and white. The hacienda—vast acres inefficiently worked by armies of peasants in the interests of a complacently cruel, land-owning elite—dominated.

In 1910, Mexico descended into another revolution. This was partly a result of being wrenched between ineffectual liberal regimes that sought to alleviate the obvious suffering of the poor but did little to address fundamental economic weaknesses and self-serving authoritarian regimes that cared more for bombast than real reform.

Bolívar’s visions of a recast, independent South America could never contend with the reality of an unequal society that shared no common belief in its own destiny and that was consistently the victim of competing, mostly violent efforts to assert special interests.

May slavery be banished forever together with the distinction between castes.

José Morelos
Leader of the failed Mexican Revolt of 1813–15
LIFE WITHOUT INDUSTRY IS GUILTY

STEPHENSON’S ROCKET ENTERS SERVICE (1830)
On September 15, 1830, the world’s first commercial passenger rail service to be powered by a steam engine—George Stephenson’s Rocket—was opened. This was the Liverpool and Manchester Railway, which was 35 miles (56km) long and served by locomotives, also designed by Stephenson, that were capable of reaching speeds approaching 30 mph (48km/h).

Stephenson’s Rocket symbolized what remains the key development in world history over the past 250 years: the transformation from an agricultural society that relied on windmills, watermills, horses, and other beasts of burden, to an industrial one, in which steam engines were capable of generating reliable power on a scale that was previously unimaginable.

**The background**

The industrialization process that started in Britain around the mid-to late 18th century was initiated by the scientific revolution in Europe in the late 17th century. Of similar importance were financial changes pioneered in the Netherlands, then imported to Britain: more readily available credit helped boost entrepreneurial activities. It had never been easier for members of the increasingly wealthy middle class, looking for ways to invest their money, to support new inventions and technologies.

A third factor was an agricultural revolution, which began in the Netherlands and Britain, where farmers realized that crop rotation made it unnecessary to leave land fallow every third year. In both of these countries, land reclamation increased the acreage available...
for farming. Crop yields were thus boosted, just as selective breeding produced larger and more profitable domesticated animals—sources of food and wool alike. With any likelihood of famine now receding, the population of Britain grew, between 1750 and 1800, from 6.5 million to over 9 million. This, in turn, meant new markets and an expanded workforce.

Finally, in Britain, an improved transport network allowed goods, produced on an ever-larger scale, to be transported faster and more reliably. Between 1760 and 1800, as many as 4,250 miles (6,840km) of canals were built in England.

Thinkers sought to understand the impulses behind these societal changes. The publication in 1776 of *The Wealth of Nations* by the Scottish philosopher Adam Smith underpinned what was becoming known as political economy, and the central role of the profit motive and of competition in increasing efficiencies and lowering prices.

This economic transformation also contributed to and was, in turn, boosted by the emergence of global markets—a consequence of burgeoning European colonial empires, which offered greater access to raw materials and also provided markets for finished goods. A better-mapped world, and improvements in ship types and position-finding at sea, also facilitated global trade.

**Steam power**
The overriding force behind the economic transformation, though, was the development of the steam engine. In an astonishingly short time, it would revolutionize Britain, making it the world’s first industrial power, and ultimately transform the world. Even so, it might never have had its dramatic global impact had Britain not had huge reserves of the fuel needed to make it work: coal. The replacement of wood as the prime source of fuel was critical to industrial development. In exactly the same way, the development of coke (processed coal that burns at much higher temperatures than coal) at the beginning of the 18th century would make the production of iron—the indispensable core material of the new technologies—faster and simpler.

Steam engines of varying degrees of reliability had been developed as early as 1712, when Thomas Newcomen built an “atmospheric engine.” But it was only with James Watt’s first rotating steam engine in 1781 that the extraordinary potential of machine

**Stephenson’s Rocket** was the steam engine on the world’s first passenger railway, which linked Liverpool and Manchester. This photograph shows it outside the Patent Office in London.
power became clear. The earliest steam engines had been used mainly as pumps. Watts's rotating engine, on the other hand, could power machinery. The engineering company he and Matthew Boulton established in Birmingham in 1775 produced over 500 steam engines.

When Watts's patents expired in 1800, others started producing their own steam engines. The textile industries in the northwest benefited in particular from the increased availability of steam power, and large-scale, almost entirely mechanized, factory production soon replaced small, home-based manufacturing. By 1835, there were more than 120,000 power looms in textile mills. No longer dependent on rivers as power sources, factories could be built anywhere, and they came to be concentrated in towns in the north and Midlands of England that rapidly grew into major industrial centers as the century progressed.

**Social changes**

Huge numbers of workers were drawn to these new cities, which became synonymous with poor living and working conditions for the workforce, many of whom were children. This influx led to the creation of an urban underclass. It took a long time before the workers saw any improvement in their lives, and the realization that they should share in the rewards of this social and economic transformation, rather than simply be exploited as mere drudges, came very slowly. In the meantime, however, the increasingly wealthy factory owners emerged as a significant political voice.

**The wider world**

As late as 1860, Britain was, by some way, still the world’s leading industrial and mercantile power, but other Western nations were quick to see how they too could benefit. In continental Europe, industrialization was initially uncertain, inhibited by the kind of political instability Britain had managed to avoid, such as the revolutions of 1848. Later, the pace of its development would rival Britain’s. In 1840, Germany and France each had around 300 miles (480km) of railway lines; in 1870, both had 10,000 miles (16,000km). Similarly, pig-iron output from each rose from about 125,000 tons in 1840 to 1 million in 1870.

---

**Isambard Kingdom Brunel**

No figure better encapsulates the determination, ambition, and vision that drove the first phase of the Industrial Revolution in Britain than the prodigiously hard-working Isambard Kingdom Brunel (1806–59). He was responsible for an extraordinary series of firsts: the world’s longest bridge (the Clifton Suspension Bridge), the world’s longest tunnel (Box Tunnel in Wiltshire), and the world’s largest ship (the Great Eastern). In 1827, still only 21, he was appointed chief engineer of the Thames Tunnel. In 1833, he became engineer to the newly formed Great Western Railway, which by 1841 linked London directly with Bristol, whose docks he had rebuilt from 1832. Believing it should be possible to travel directly from London to New York, Brunel also designed the world’s first practical ocean-going steamship, the Great Britain. He followed this with the screw-driven iron-built Great Britain. Despite his great vision, delays and cost overruns dogged many of Brunel’s projects, but his works include some of the grandest feats of engineering the world had yet seen.

---

**The Bessemer process**, devised by the English engineer of the same name to convert iron into steel, improved the efficiency of all industries—from transport to the military.

However, the most startling developments came in the United States, where there were around 3,300 miles (5,300km) of railway in 1840, almost all in the northeast. By 1860, this had increased to 32,000 miles (51,500km), and by 1900 it had soared to 193,000 miles.
(310,600km) of rail track. The production of pig iron rose similarly: in 1810, it was a little less than 100,000 tons a year; in 1850, it was approaching 700,000 tons; in 1900, it was over 13 million.

The role of steel
By about 1870, in both Europe and the United States, a second wave of industrialization began, in which oil, chemicals, electricity, and steel became increasingly important. The production of steel had been transformed after 1855, when English engineer Henry Bessemer devised a way to make the metal lighter, stronger, and more versatile; from that point forward, steel would prove the linchpin for industry. In 1870, total world steel production was 540,000 tons, but within 25 years it had risen to 14 million tons, and railways, armament production, and the shipbuilding industry all benefited from its ready availability.

While Germany was beginning to threaten Britain’s industrial preeminent position in Europe, quadrupling its industrial output between 1870 and 1914, the United States was rapidly becoming the world’s largest industrial power. In 1880, Britain was still producing more steel than the United States, but by 1900 the United States was producing more steel than Britain and Germany together.

At the same time, steam-powered ships were also being introduced. Sailing times, no longer dependent on the vagaries of the wind, became more controllable, and journey times were shortened. The ships were significantly larger, too. While the largest wooden ships rarely exceeded 200ft (60m) in length, the Great Eastern, launched in 1858, was 689ft (210m) long.

Total world steamship tonnage in 1870 was 1.4 million. By 1910, it had reached 19 million.

Winners and losers
The benefits of industrialization were unevenly spread. Southern Europe was slow to react to it, and Russia also struggled to catch up. The Chinese and Indian empires proved unwilling or unable to industrialize, Latin America did so only intermittently, and Africa was dominated by technologically superior powers. By contrast, after 1868, Japan’s single-minded pursuit of industrialization made it a world power.

Industrialization also made possible a new kind of warfare, one capable of bringing death on a scale never seen before. An enduring irony of industrialization is that the nations that benefited most from it turned it against themselves in two world wars, deploying weapons of extraordinarily destructive power.

The Industrial Revolution laid the foundations for the modern world. Fueled by an enormous sense of new possibilities, in some places it raised living standards across all sections of society in ways unimaginable in earlier ages. However, in the wealthy West, it also produced a sense that material superiority was equivalent to a kind of moral superiority, one that not merely made it possible for the West to dominate the world, but demanded that it do so.
YOU MAY CHOOSE TO LOOK THE OTHER WAY, BUT YOU CAN NEVER AGAIN SAY YOU DID NOT KNOW

THE SLAVE TRADE ABOLITION ACT (1807)

IN CONTEXT

FOCUS
Abolitionism

BEFORE
1787 The Society for the Abolition of the Slave Trade is founded in London.

1791 Slaves revolt in the French Caribbean island of Haiti (St. Domingue). Independence is successfully declared in 1804.

AFTER
1823 The Anti-Slavery Society is founded. It campaigns to abolish slavery throughout the British Empire.

1833 Slavery is outlawed throughout the British Empire.

1848 Slavery is abolished in France’s colonies.

1865 The Thirteenth Amendment outlaws slavery in the United States.

1888 Brazil abolishes slavery, the last country in the Americas to do so.

Radical notions of freedom in Britain combine with the religious belief that slavery is an abomination.

Merchants and plantation owners resist calls for an end to slavery.

After several parliamentary defeats, the Slave Trade Abolition Act is passed by an overwhelming majority.

Britain campaigns vigorously to persuade other nations to oppose the shipping of slaves.

Slavery is abolished in the British Empire in 1833. It does not finally end in the US until 1865.

The passing in 1807 of the Act Prohibiting Importation of Slaves in the United States and the Abolition of the Slave Trade Act in Britain marked a radical shift in Western thinking. Even as late as the 1780s, the trade in slaves was still regarded as a “natural” economic activity. Both the newly created United States, “conceived in liberty,” and the European colonies in the Caribbean depended on slave labor that was relatively easily obtained in West Africa. Portuguese-ruled Brazil was even more dependent on slaves. Yet Britain in particular found itself in an uncomfortably anomalous
Even so, Britain was also, by some margin, the West’s leading slave-trading nation. It was this contradiction that offended both religious and Enlightenment political sensibilities alike.

**Global changes**
To a number of high-minded and unusually active campaigners such as William Wilberforce and Thomas Clarkson, the abolition of slavery became an imperative. A remarkably effective campaign was launched that, despite entrenched opposition, rapidly won wide public and parliamentary support. For much of the 19th century, the Royal Navy would be at the forefront of the campaign to intercept those still engaged in slave trading.

While Britain took the lead, the movement had important supporters elsewhere. The revolutionary French National Convention outlawed slavery in 1794 (though this would partially be overturned by Napoleon in 1802). Brazil aside, where slavery would not be banned until 1888, all the newly independent states that emerged in Latin America after 1810 likewise outlawed slavery.

It wasn’t until 1833 that slavery itself, as opposed to the trade, was made illegal in the British Empire. Whatever the efforts of a new set of campaigners, not least Elizabeth Heyrick, the motive was not entirely humanitarian. The Haitian slave revolt, which began in 1791 and led to the emergence of an independent Haiti in 1804, had left the West uncomfortably aware that any such uprisings might prove difficult to suppress. A slave revolt in British-ruled Jamaica in 1831 reinforced the point: in the longer term, freeing slaves might prove less trouble than enslaving them.

The United States, forward-looking and expansive, remained the great troubling sore. The more abolitionists in its industrializing northern states denounced slavery, the more its southern states, their agrarian economies dependent on slave labor, were determined to retain it. It would take a four-year civil war and 670,000 dead to settle the question.

---

**The Haitian Revolt**

Few uprisings illustrate the contradictions of the revolutions that swept across the late 18th-century Western world better than that in Haiti (1791–1804). This French Caribbean colony, known as St. Domingue, owed its enormous prosperity to slave labor. The revolt, led by a freed slave, Toussaint L'Ouverture, was inspired by the American and French revolutions. Yet neither country supported it: The US was concerned it might inspire similar revolts in its slave states; France, despite its pledge to abolish slavery, was wary of the damage to its trade. Spain, which ruled the eastern half of the island, also opposed it, as did Britain, fearing it would spread to its own colonies. Even the South American colonies seeking independence refused to back it, fearful of its impact among their substantial slave populations. Yet the occasional combined resources of all these states were unable to quell the uprising. This was the only slave revolt to result in the emergence of an independent state.

——

The state of slavery is repugnant to the principles of the British constitution and of the Christian religion.

Thomas Fowell Buxton
British politician (1823)
SOCIETY WAS CUT IN TWO
THE 1848 REVOLUTIONS

On February 24, 1848, Louis-Philippe of France, the "Citizen King," abdicated as Paris erupted in protest at the government’s refusals to initiate reforms—demanded by the middle and working classes alike—to introduce political liberalization and to end inequalities. In his place, a Second Republic was declared. In June, fearful that one authoritarian government had been exchanged for another, the Parisian working classes rose again, but the uprising was savagely put down. In December, Louis-Napoleon Bonaparte—nephew of Napoleon, who had died in 1821—was elected president. In 1851, he staged a coup, and the following year he was proclaimed as Emperor Napoleon III.

France was plagued by political instability throughout the 19th century. The 1848 revolution came after a similar upheaval in 1830, and it would be followed by an even more violent uprising 23 years later, in 1871.

The spark for the revolution of 1848 was a famine during the previous two winters. This provoked widespread unrest among the dispossessed urban poor, along with demands from a burgeoning bourgeoisie for liberal political reforms. The ardor of the revolution sparked similar revolts across continental Europe, most obviously in the German Confederation, in multi-ethnic Austria, and in Italy. Every single revolt was subdued, in most instances by force.

The rise of socialism
Before and after the final defeat of Napoleon in 1815, and concerned about citizens rising up elsewhere, Europe’s statesmen met in Vienna to try to create a political order that would stifle such an occurrence.

FOCUS
Labor movements, socialism, and revolution

BEFORE
1814–15 The Congress of Vienna restores the French monarchy.
1830 Charles X of France is overthrown. Greece obtains its independence from the Ottoman Empire.
1834 An uprising of French silk-weavers is suppressed.

AFTER
1852 The Second French Republic, established in 1848, is dissolved. Louis-Napoleon is proclaimed Napoleon III.
1861 Victor Emmanuel II is declared king of a united Italy.
1870–71 The Franco-Prussian War ends with the unification of Germany under Prussia. The Paris Commune is overthrown, and a Third Republic declared.

This painting by Horace Vernet shows the barricades at Rue Soufflot, Paris. In June 1848, fighting erupted between the liberal republican government and Parisian workers seeking social reform.
Workers of the world, unite! You have nothing to lose but your chains!

*The Communist Manifesto*

Their goal was the preservation of aristocratic ruling elites, sustaining the old order, and holding frontiers. This desire, however, was to be countered by a new political reality informed by a number of factors, including the desire to ensure that the liberties championed by the French Revolution were upheld. This new reality was also the result of what came to be called nationalism: the right of peoples, however they were defined, to determine their own futures as independent nations.

*The old order is restored*

In the feverish atmosphere of 1848, however, these aims would prove irreconcilable. As chaos threatened, the liberally minded middle classes sided much more naturally with existing political elites in restoring order than with the radicals seeking to rebuild societies and create new nations.

The ultimate beneficiaries of the revolutions were the monarchies in Italy and Germany, which would exploit a kind of popular nationalism to unify their countries. But at the same time, as economic shifts brought social change in their wake, the gradual emergence of trade unions—at least in Western European liberal democracies—led to improving standards of living for the previously dispossessed.

*The Congress of Vienna* attempts to stifle nationalism and the threat of future revolt.

The promise of liberalism proves impossible to extinguish. Demands for national self-determination grow.

France, in particular, after the restoration of the monarchy, sees violent uprisings.

The French Revolution of 1848 spawns rebellions in Germany, Austria, and Italy. All are suppressed by force.

Conservative elites exploit nationalism to drive the unifications of Italy and Germany.

*The Communist Manifesto* was published in London in 1848, the same year as the revolutions that engulfed Europe. Although its impact on those upheavals was negligible, its resonance in years to come on social thought almost everywhere would be overwhelming. The pamphlet was the work of two Germans: Friedrich Engels, son of a textile manufacturer, and the similarly privileged Jewish academic Karl Marx. In 1847, both men had joined a semi-subversive French group, the League of the Just, which later re-emerged, in London, as the Communist League. Engels subsequently financed Marx’s seminal work, *Das Kapital*, its first volume published, again in London, in 1867. It was a detailed attempt to demonstrate how what Marx called capitalism contained the seeds of its own downfall, and the inevitability of the proletarian revolution that would create a classless society free of exploitation or want.
THIS ENTERPRISE WILL RETURN IMMENSE REWARDS

THE CONSTRUCTION OF THE SUEZ CANAL (1859–1869)
The ceremonial opening, on November 17, 1869, of the Suez Canal, linking the Mediterranean and the Red seas, was an emphatic declaration of European—specifically, French—technological and financial means. It was also a significant illustration of a rapidly emerging and increasingly interdependent global economy, featuring goods from all parts of the world being traded on an ever-larger scale. This was a process dominated by Europe’s colonial powers and the United States, overwhelmingly its principal beneficiaries. It was simultaneously a further boost to Europe’s imperial ambitions. The Suez Canal reduced the sailing route between London and Bombay by 41 percent, and the route between London and Hong Kong by 26 percent. The impact on trade was plain to see. However, reduced sailing times also greatly simplified the defense of India and its crucial markets, Britain’s key imperial goal. By the end of the 19th century, trade in the Indian Ocean, protected by no fewer than 21 Royal Navy bases, had become almost a British monopoly, a point further underlined when Britain gained control of the Suez Canal in 1888 after having invaded and occupied Egypt six years earlier. This “gunboat diplomacy” proved a remarkably effective means of protecting British interests.

**The Panama Canal**
The Suez Canal was just one of a number of similar massive engineering undertakings in the interests of imperial trade. An even more challenging project was the construction, begun in

1878 The Gold Standard is adopted in Europe; the US follows suit in 1900.

1891 The Trans-Siberian railway is begun. It is completed in 1905.

1899–1902 Britain aims to secure control of South Africa in the Second Boer War.

1914 The Panama Canal, linking the Atlantic and Pacific oceans, opens.

---

**The Industrial Revolution** allows the rapid development of Western economies.

New industries are hungry for more resources.

Technology and transport develop to support this new global economy.

Developed countries build empires and use their colonial muscle to feed their industries.

New classes of workers hanker for consumer goods.
The Suez Canal opened in 1869 and dramatically cut sailing times between Europe and Asia. This provided a massive boost for trade, which, in turn, spurred technological advances.

Roosevelt’s successor, William Taft, pursued a more legalistic variant of the policy—Dollar Diplomacy—by which American commercial interests, chiefly in Latin America and East Asia, were to be secured by the full backing of the US government, and huge overseas investments encouraged.

Trains and telegraphs
At the same time, major new railways were constructed in both the US and Europe. The east and west coasts of the US were first linked by rail in 1869, with the opening of the 1,907-mile (3,070-km) Central Pacific Railroad. By 1905, there were eight more transcontinental rail lines across the United States and one in Canada.

The building of the Trans-Siberian Railway in Russia, between 1891 and 1905, was undertaken in

May the Atlantic telegraph, under the blessing of Heaven, prove to be a bond of perpetual peace and friendship between the kindred nations.

President Buchanan
Telegram to Queen Victoria (1858)

The scheme in question is the cutting of a canal through the Isthmus of Suez.

Ferdinand de Lesseps
French diplomat on his proposals for the Suez Canal (1852)
the same spirit. A remarkable 4,600 miles (7,400km) long and spanning seven time zones, it remains the longest continuous railway in the world. It played a key role not just in the settlement of Russia’s vast Siberian territories, but in Russia’s encroachment on parts of northern China, too.

The impact of the telegraph was just as significant, allowing messages to be communicated along electrical lines. Samuel Morse devised the system in the United States in the 1830s, and the first telegraph line was inaugurated in May 1844. Within a decade, there were 20,000 miles (32,200km) of telegraph cable in the US.

The first telegraph cable across the Atlantic, laid in 1858, worked for only two weeks. But by 1866, a new cable had been installed, capable of transmitting 120 words per minute. By 1870, a telegraph link had been established between London and Bombay; this was then extended to Australia in 1872 and New Zealand in 1876. By 1902, the United States was linked to Hawaii. This was the first near-instant international communications system.

**The Great Eastern**

The ship responsible for laying the transatlantic cable in 1866 was the *Great Eastern*, designed by the most visionary engineer of the first phase of the Industrial Revolution, Isambard Kingdom Brunel. Designed to carry 4,000 passengers from England to Australia non-stop (and to return to England without refueling), the ship was overly ambitious in concept and a commercial failure.

However, it was indicative of a trend toward larger, faster, and safer ships. Unlike the *Great Eastern*, which was built of iron, later, steel-built, propeller-driven ships would prove more versatile. Their introduction coincided with the development of more powerful and efficient steam engines.

**Steamships and trade**

The decline of the sailing ship further transformed imperial trade. One notable result was the introduction of a series of ever-larger passenger ships. The transatlantic route saw the most obvious developments. In 1874, the British steamer *Britannic*, capable of generating 5,500 horsepower, set a new east–west Atlantic record of just under eight days. In 1909, the *Mauretania*, which generated 70,000 horsepower and carried over 2,000 passengers, set a new record of four days and 10 hours, cruising at an average speed of 26 knots, or 30mph (48km/h).

New types of merchant ships—mainly refrigerated vessels—were also being built. Such developments show how technology helped drive trade, making it possible to reach global markets. The cattle and sheep farms in South America (especially Argentina), Australia, and New Zealand were growing in size in line with their own populations. At the same time, the number of people in Europe was also increasing—for example, Britain swelled from 28 million to 35 million between 1850 and 1880. Feeding and clothing the populations were important priorities. Wool could be easily transported, but lamb and beef could not be shipped because it would rot en route—until 1877, when 80 tons of frozen beef were shipped from Argentina to France on board the world’s first refrigerated ship. By 1881, regular shipments of frozen meat were traveling between Australia and Britain. The first shipment of lamb from New Zealand was made the following year. There was a vast increase in the export of meat from all three countries—New Zealand, for example, exported 2.3 million frozen sheep in 1895, 3.3 million in 1900, and 5.8 million in 1910.

The demand for cotton—above all in the great textile mills of the northwest of England, which by 1850 were producing up to 50 percent of the world’s cloth—led to an enormous surge in cotton growing. In the southern states of the US, raw cotton production increased from
The Suez Canal greatly shortened travel times—and eased journeys—between parts of the British Empire, such as England and India. That distance of 10,800 nautical miles was cut by more than 40 percent, to just 6,200 nautical miles.

Global finance
This complex trading network could not have grown without developments in banking and financing. Throughout the late 19th century, new banks were established, their capital used to support enterprises across the world. At the same time, London emerged as the world’s financial capital. By the end of the 19th century, the British pound sterling, its value pegged at 113 grains of gold, was the currency against which all others were measured.

Western overseas investments dramatically increased. By 1914, the United States had overseas assets worth $3.5 billion, Germany $6 billion, France $8 billion, and Britain almost $20 billion. Between them, North America and northern Europe’s share of world income in 1860 was about $4.3 billion a year, 35 percent of the world’s total. In 1914, it was $18.5 billion, 60 percent of the world’s total.

Patterns of imperialism varied over the 19th century. In the British Empire, for example, clear and increasing distinctions were drawn between those colonies—in Africa and Asia, above all—whose native populations were governed by Europeans, and those—such as Canada, South Africa, Australia, and New Zealand—deemed capable of self-government. By 1907, all four had been granted dominion status. It was not a privilege extended to a single British African colony or to India.

The Great Mineral Rush
The search for new sources of minerals, both precious and industrial, reached new heights toward the close of the 19th century. Discoveries of diamonds and gold in the US, Canada, Australia, and—most significantly of all—South Africa sparked a frenzy of development. Diamonds were discovered in South Africa’s Orange Free State in 1867, and gold in the Transvaal in 1886. Both were independent Boer republics, established by the descendants of the original Dutch settlers of what had become the British Cape Colony. Their heightened economic importance reinforced Britain’s determination to annex them, which they could do only after the bitter Boer War (1899–1902), which stretched Britain’s military resources to their limits. The exploitation, both before and after the conflict, of the mineral resources of what in 1910 became the Union of South Africa by armies of underpaid black workers would later prove to be critical in the institutionalizing of Apartheid.

Working conditions in South Africa’s gold mines were harsh, and the work force—mainly young black men—was exploited and underpaid.
Perhaps the most important scientist of the 19th century, Charles Darwin originally intended to follow his father into medicine and was subsequently sent to Cambridge to train as an Anglican cleric. Endlessly curious, he was interested in almost any scientific question.

The publication of his book *On the Origin of Species* (1859) introduced a new scientific understanding of what gradually came to be known as evolution. In the book, Darwin asked a fundamental question. The world teems with plant and animal life: where and what had it come from? How had it been created?

Scientific advance

BEFORE

1831–36 The voyage of the HMS *Beagle* takes the young naturalist Charles Darwin around the world.

AFTER

1860 Thomas Huxley defends Darwin from an attack by the established Anglican church.

1863 Gregor Mendel demonstrates how genetics influence all plant life.

1871 Darwin’s *The Descent of Man* advances the view of sexual selection, whereby the most successful members of a species are naturally attracted to perpetuate the species.

1953 Discovery of DNA demonstrates how traits are passed on genetically.

Modern science decisively reinforces the evidence and conclusions presented in Darwin’s landmark text.
Charles Darwin was far from the first to propose that a process of change over vast periods had produced this diversity, but he was the first to suggest an explanatory theme, which he called “natural selection”.

**Natural selection**

At the heart of Darwin’s idea was his contention that all animal life was derived from a single, common ancestor—that the ancestors of all mammals, humans included, for example, were fish. And in a natural world that was never less than relentlessly violent, only those most able to adapt would survive, in the process evolving into new species.

These views were largely formed by the around-the-world voyage he made as the naturalist on the British survey vessel HMS Beagle between 1831 and 1836, most of it spent in South America. It would take him 10 years to work up his voluminous notes and to go through all the samples he collected on his voyage.

Darwin’s book inevitably generated controversy, outraging Christian views that the world had been created intact and unchanging by a benevolent deity. Yet however heated the initial debate, quite rapidly there was widespread acceptance of Darwin’s views and a realization that he had made a decisive contribution to the understanding of the world. In the process, the status of science generally was immensely boosted.

**The primacy of science**

Despite everything, it was possible for Darwinism to be warped. What came to be called “the survival of the fittest” would later prove to be influential in justifying imperialism, racism, and eugenics. _On the Origin of Species_ was published at a time when a growing understanding of the natural world and rapid technological progress meant scientific study had a greater practical worth than ever before. Darwin was one of the last amateur gentleman scientists in a discipline that was becoming professionalized as society came to view science more highly. Partly as a result of Darwin’s work, but also because of these changing attitudes, science began to have a more central place in public life. By the end of Darwin’s life, continual progress in scientific knowledge had become an almost standard expectation.

---

**Charles Darwin**

Charles Darwin (1809–82) was only the fifth choice for the position of naturalist on the voyage of the HMS Beagle in 1831. However fortuitous his selection, it would transform his life. Although he was constantly seasick during his time aboard the craft, Darwin proved himself an assiduous observer of the world around him. He would take as much amazed delight in the jungles of Brazil as he would in the pampas of Argentina or in the arid wastes of the Galapagos Islands. Upon returning to England, he settled into a life of persistent hard work—the model high-Victorian scientist, aided by considerable private means and a notably happy family life, despite the deaths of three of his ten children. Although his own health may effectively have been severely damaged by the time he spent on the _Beagle_, his output remained prodigious, as did his level of intrigue at almost any subject in the natural world. In the absence of the exotic, he was as fascinated by pigeons as by parasites, barnacles as much as earthworms.
LET US ARM.
LET US FIGHT
FOR OUR BROTHERS
THE EXPEDITION OF THE THOUSAND (1860)

On May 11, 1860, the Italian patriot and guerrilla fighter Giuseppe Garibaldi landed in Sicily, then part of the Bourbon-ruled Kingdom of the Two Sicilies, in southern Italy, leading a force of volunteers drawn from across Italy and just over 1,000 strong, hence their name, *I Mille* (The Thousand). Their goal was to overthrow the Bourbons, but there was much uncertainty as to what government would replace the ruling family.

Like the other great 19th-century stalwart of Italian liberty, Giuseppe Mazzini, who in 1849 had briefly established a Roman republic, Garibaldi was committed to ending royal, clerical, and aristocratic...
privilege. He was also driven by the goal of ending Austrian rule in the north of the country and by the idea of a united Italy. The desire to form new political entities based on common national elements such as geography and history came to be known as nationalism.

**Reaching a compromise**
In 1859, much of Italy had already been united under the state of Piedmont-Sardinia, in the northwest of Italy, a process directed by its shrewd and pragmatic prime minister Camillo Cavour and critically boosted by French military assistance in expelling the Austrians.

For Cavour, unification meant the creation not of a republican Italy, but of a centralized state under a constitutional monarchy. He believed this was the only way that Italy could realize its potential—above all, to press ahead with industrialization and compete with the leading powers of Europe.

The Redshirts’ forces, swelled by locals flocking to join them, soon overcame the ineptly led armies of the Kingdom of the Two Sicilies.

When it came to deciding upon a government for the newly united Italy—Venice and Rome excepted, though both would subsequently be incorporated, in 1866 and 1870 respectively—Garibaldi recognized the inevitability of Piedmontese domination. In November 1860, with Garibaldi at his side, Victor Emmanuel II of Sardinia entered Naples. In March 1861, he was crowned king of Italy.

**Divided goals**
The difference between Garibaldi’s and Cavour’s goals illustrates the contradictions at the heart of nationalism in 19th-century Europe. Prompted by the notions of liberty and equal rights promised by the French Revolution, nationalism developed an idealistic view of a more just society. National groups oppressed by alien rule believed they should be able to assert their independence as a natural right.
Nationalism was furthermore characterized by a romantic view of the right of peoples to lay claim to their historic destinies and rule themselves: independence. In place of loyalty to an established ruling dynasty, new loyalties to national groups defined by language, culture, history, and self-identity were formulated. The idea of the nation-state became increasingly common, and likewise a belief in the right to national self-determination. The failure of the revolutions of 1848 in central Europe and Italy, intended to advance these very goals, made plain the resolve of Europe’s ruling elites to oppose such initiatives and to preserve the Europe created by the Congress of Vienna in 1814–15, after the defeat of Napoleon—a Europe of monarchs, multinational empires, and pre-French Revolution frontiers. 

Metternich’s failures

The new Europe was far from stable, and the principal architect of the Congress of Vienna, the Austrian Prince Metternich, would later admit: “I have spent my life in shoring up rotten buildings.” By 1830, Belgium had revolted against the Kingdom of the Netherlands, of which it was a province; the next year, it secured its independence with British support. Similar nationalist uprisings followed in Poland in 1831 and in 1846, both savagely repressed by Russia.

German nationalism

Rising nationalism had momentous consequences, especially in the various states across Germany. The country’s unification under the chancellorship of Otto von Bismarck of Prussia in 1871 and the declaration of a German empire jolted Europe into a new era. For Bismarck, much as they had been for Cavour, the benefits of unification were clear. It would be the means by which a common German nationality could be expressed, allowing the country to fill the need to underline an overarching German character that the philosopher Georg Hegel had identified. It would also break the dominance of Habsburg Austria over the German-speaking world—in particular, to lever the southern Catholic German states, Bavaria above all, away from Austrian influence. In the interests of building this great German state, Bismarck pressed into service a kind of conservative nationalism. The goal was not social or democratic reform to establish a more just or liberal state; it was the creation of a country to challenge the world. German nationalism under Bismarck translated into a determined adoption of industrialization and the creation of ever larger and more efficient armed forces.

And it was military means that Bismarck single-mindedly deployed to create this new Germany. He mounted three major campaigns. The first, against Denmark in 1864, saw Prussia subsuming the southern Danish territories of Schleswig and Holstein, with Austrian support. In 1866, Prussian troops routed Austria itself, finally, in 1870–71, an army from across Germany comprehensively and humiliatingly defeated France, toppling Napoleon III’s government, and starving Paris into submission. These military victories underlined a seemingly irresistible German destiny whose logical consequence was a unified German empire under the Prussian king, now emperor, Wilhelm I. 

Nationalist aspirations

Nowhere were the conflicting impulses of nationalism more tangled than in the Habsburg Austrian Empire, an immense patchwork of ethnic groups across Central Europe under the nominal rule of Vienna. In 1867, following Austria’s defeat by Prussia the previous year, Hungary was able to secure almost complete independence from Austria. The “dual-monarchy” that resulted—the Austrian Empire, now the Austro-Hungarian Empire—

A people destined to achieve great things for the welfare of humanity must one day or other be constituted a nation.

Giuseppe Mazzini, 1861
The proclamation of Wilhelm I as Emperor of Germany took place in Versailles in 1871. It was heralded by a series of military campaigns, including one against France. Only greatly boosted an assertive sense of Hungarian self-identity but also secured Hungary significant territorial concessions from Vienna, notably in Transylvania and Croatia. Yet whatever the continuing tensions between Austria and Hungary, the two warily preferred to remain united precisely for fear of further nationalist agitations from their own splintered ethnic populations. The Hungarians, for example, were notably reluctant to concede the kind of political rights they demanded for themselves to their substantial Slovak, Romanian, and Serb populations. At the same time, waning Ottoman control of the Balkans also encouraged nationalist aspirations—Serbia, for example, had emerged as a more or less independent state as early as 1817. Wallachia and Moldavia, essentially modern Romania, could lay similar claims to independence by 1829. The Greeks, portraying themselves as the legatees of ancient Greek civilization, a role that won them support from liberals across Europe, had secured their independence by 1830 after a nine-year war.

Both Austria and Russia competed to fill the void left by the Ottomans. Austria's provocative occupation of Bosnia in 1878, which it peremptorily annexed in 1908, would create tensions that led directly to the outbreak of World War I in 1914. The Balkan Wars of 1912–13—in effect a bitter squabble for supremacy between Serbia, Bulgaria, and Greece—were further evidence of the destabilizing effect of nationalist-driven state building.

The consequences

The notion that social justice could be secured by peoples pursuing the right to self-determination would rarely be realized in the 1800s—Vienna would continue to rule over its multi-ethnic empire until its defeat at the end of World War I in 1918, for example. Likewise, the people of Poland were denied any means of exercising such nationalist rights to self-determination. And the Jews of Europe remained persistently oppressed, whatever the promise of Zionism from the 1890s to create a Jewish nation in the Holy Land.

Otto von Bismarck

Minister-president of Prussia from 1862 and chancellor of Germany 1871–90, Otto von Bismarck (1815–98), also known as the Iron Chancellor, towered over continental Europe after engineering the unification of Germany. Bismarck’s main goals were to ensure Prussian leadership of the German world at the expense of Austria and to contain the threat of renewed French hostility. A supreme opportunist, despite starting three wars, in 1864, 1866, and 1870, Bismarck thereafter worked tirelessly to maintain the balance of power in Europe, a task in which, juggling competing interests, he was remarkably successful. He committed Germany to a huge program of industrialization, oversaw the further growth of the German armed forces, and launched a program of colonization. Despite being socially conservative, Bismarck also introduced the world’s first welfare system, though his motive was as much to outflank his socialist opponents as to protect the interests of German workers.
THESE SAD SCENES OF DEATH AND SORROW, WHEN ARE THEY TO COME TO AN END?
THE SIEGE OF LUCKNOW (1857)

The Siege of Lucknow, which took place between May and November 1857, led to scenes that were duplicated across much of north-central India during the Indian Mutiny of 1857–58: of British enclaves enduring great suffering at the hands of previously loyal local troops. When the British began to restore order, the retribution was no less severe. The violence from both sides shocked the public and led to immediate calls for reform.

The mutiny began when the Indian troops—sepoys—became convinced that the cartridges of their new rifles had been greased with cow and pig fat, offensive to Hindus and Muslims alike. But its roots lay in the dislocation that many in India felt at British control—the uprooting of traditional rulers, the apparent threat to local religions, and the aggressive assertion of alien rule.

Britain’s initial response after the mutiny was intended to reassure India of Britain’s peaceful intentions toward it, but in reality it underlined the fact that India was now entirely subservient to Britain, both economically and politically.

As the number of European-educated Indian elites grew, they would challenge Britain’s rights over the subcontinent. Britain would continue to assert its imperial destiny, but increasingly had to confront the improbability that it could. If there was an enduring truth, it was that British rule in India was never as robust as it seemed.

We hold ourselves bound to the natives of our Indian territories by the same obligations of duty which bind us to our other subjects.

1824 The British conquest of Burma is launched; it is largely completed by 1886.
1876 Queen Victoria is declared Empress of India.
May 1857 The first revolt by Indian sepoy troops against British rule occurs at Meerut.

AFTER
1858 The rule of the East India Company in India is formally ended. Control of India passes directly to the British crown.
1869 The Suez Canal is opened, dramatically reducing sailing times to and from India.
1885 The Indian National Congress is founded—the first pan-Indian political movement. It later forms the core of a nationalist movement.
Alexander II’s emancipation of Russia’s 20 million serfs (unfree laborers) in 1861 was not a humanitarian act. Its goal was a further attempt to modernize a Russia that, regardless of potential, was being left behind by the industrializing nations of the West. To take what it saw as its rightful place in the world, Russia adopted wide-ranging reforms across political, social, economic, and military areas.

The effects of these reforms were mixed at best. Emancipation did very little to improve the serfs’ well-being or agricultural productivity, and Alexander refused to consider any real constitutional reform: he remained an autocrat to the last, convinced of his divine right to rule as an absolute monarch. However, his reforms had raised hopes that a degree of political liberalization might follow.

A police state
His assassination in 1881 provoked a predictably reactionary backlash. His successor, Alexander III, showed greater willingness to embrace industrial reform but also created a kind of police state: introducing strict censorship, suppressing protest, and making trade unions illegal.

Nonetheless, tsarist Russia was emerging into the industrialized world. The country could lay claim to substantial, if not always efficient, military means. Politically, however, its unwillingness to reform would ultimately ensure its complete destruction in a Soviet revolution.

We must give the country such industrial perfection as has been reached by the United States of America.

Sergei Witte
Russian minister

We must give the country such industrial perfection as has been reached by the United States of America.

The American Civil War

BEFORE
1820 An attempt is made, in the Missouri Compromise statute, to restrict slavery in the new states to a line south of the Missouri border.

1854 The Kansas-Nebraska Act sparks violence in Kansas.

1857 The Dred Scott Decision rules that even in non-slave states, slaves cannot be freed.

1861 The Confederate States are declared (February); in April, the Civil War begins.

1863 In July, the Confederates are defeated at Gettysburg and Vicksburg.

AFTER
1864 Lincoln is re-elected.

1865 General Lee surrenders; Lincoln is assassinated.

On November 19, 1863, little more than halfway through the American Civil War, in Gettysburg, Pennsylvania, US President Abraham Lincoln gave what came to be known as the Gettysburg Address. In it, he characterized the Civil War as a struggle both for national unity and to guarantee equality for all people.

Lincoln was talking at the dedication of the Soldiers’ National Cemetery, which commemorated the 7,058 soldiers killed at the Battle of Gettysburg, an encounter fought between July 1–3, the same year that had left 27,224 more wounded. Gettysburg had been the bloodiest battle of the American Civil War, as
The causes of the war
The American Civil War was not simply a war about slavery; it was a war about whether so divisive an issue could be allowed to break up the United States. The United States, as Lincoln said, was a nation “conceived in liberty and dedicated to the proposition that all men are created equal,” yet its Southern states had a population of almost 4 million black slaves. Under the constitution of the United States, they were legally owned property. For the abolitionists of the rapidly industrializing north—always a minority, but still exceedingly vocal—slavery was morally repugnant and an outrage against their Christian sensibilities.

However, slavery was not just the backbone of the agricultural prosperity of the Southern states; for slave-owning Southerners, it was a right. For them, “liberty” had an additional meaning: the liberty to possess slaves.

The disagreement underlined the question over States’ Rights—the extent to which the rights of individual states trumped the authority of the federal, or central, government in Washington. This question repeatedly resurfaced as territories in the west were settled and sought admission to the Union: would they be slave or “free” states?

The 1820 Missouri Compromise stated that slavery would be allowed only in new states south of a line extending westward from the southern border of Missouri. It was later agreed that the settlers of new states should decide for themselves whether theirs would be free or slave states—a decision that was reinforced by the »

Abraham Lincoln

When he arrived in Washington in February 1861 for his presidential inauguration, Abraham Lincoln (1809–65) was widely dismissed in political circles as an ignorant, socially awkward backwoodsman. By the time of his assassination just four years later, he had come to dominate America. Lincoln had not just won the Civil War, but he had also established himself as a kind of irresistible political oracle.

Born in a log cabin in Kentucky, Lincoln qualified as a lawyer by his late 20s. He became an increasingly articulate champion of what would emerge as the anti-slavery Republican party. Despite having no military experience, Lincoln proved an increasingly shrewd judge of how the Civil War should best be fought, actively arguing in favor of General Grant. He never lost sight of his wider aims: the maintenance of American liberties and the essential dignity of humanity. He pushed on with the war with unflinching determination, yet he understood precisely what loss of life on the scale of the Civil War meant.
Kansas-Nebraska Act of 1854. Since both Kansas and Nebraska were to the north of Missouri’s southern border, what followed, in Kansas above all, was a sudden inrush of pro- and anti-slavery settlers, each desperate to prevail. The two sides clashed repeatedly and violently.

**The South breaks away**
This conflict led to the founding of a new anti-slavery party, the Republicans, on whose ticket Abraham Lincoln, with practically no support from any slave state, was voted into office in November 1860. Lincoln’s victory prompted the almost immediate decision by South Carolina to secede, to leave the Union. By February, a further six Southern states had broken away, and the seven declared themselves a new nation: the Confederate States of America. By May, when Richmond in Virginia was made the capital of the new country, four more states had joined them. However, five slave states, the so-called Border States, opted to remain within the original Union.

The Confederacy argued that the Constitution had been freely adopted, and as such any state could legitimately break away from the Union if it felt oppressed. As free-born men, the citizens of the South had an “inalienable” right to shape their own destinies, just as the founding fathers had when they rejected the tyranny of British rule. In the minds of many Southerners, the US government was guilty of precisely the same kind of tyranny in seeking to limit these freedoms. It was a deeply held position. As Alexander Stephens, vice-president of the Confederacy, asserted, the cornerstone of this new state “rest[ed] upon the great truth that the negro is not equal to the white man; that slavery... is his natural and normal condition...”.

As a supreme political operator, Lincoln realized the need to proceed with caution. Initially at any rate, his position was that he sought only to restrict the expansion of slavery while preserving the Union. On the second point, Lincoln was immovable; he felt the authority of the federal government overrode that of individual states.

The United States, the only fully democratic country on Earth, had been created as what Lincoln called “a great promise to the world,” so ensuring its survival was an absolute moral duty. By the time of his Emancipation Proclamation
in January 1863, Lincoln felt politically secure enough to order the freeing of all Southern slaves. But in the short term, the Civil War was fought to keep this “great promise” intact.

**Eventual Northern victory**
The outcome of the American Civil War was dictated ultimately by the human and material discrepancies between the North and the South. There were 21 Union states with a population of 20 million, and 11 Southern states with a population of 9 million, 4 million of whom were slaves, and therefore not allowed to bear arms. Despite the fact that by 1864, 44 percent of males in the North between the ages of 18 and 60 were in military service, versus 90 percent in the Southern states, the North was still able to enlist 2.2 million men over the whole war, compared to the South’s 800,000.

The North was three times richer than the South. It had 2.4 miles (3.8km) of railroad to every 1 mile (1.6km) in the South. Its factories manufactured 10 times more goods. It produced 20 times more iron than the South, 38 times as much coal, and 32 times as many firearms. The only area in which the South exceeded the North was in cotton production, at 24 to 1.

In the face of this superiority, the fact that the South was not only able to resist the Union forces for four years but also to come close to victory in 1862 and 1863 was a reflection of the Southern soldiers’ profound belief in their cause. It was also the result of its plainly superior generals—the Virginian Robert E. Lee above all. By contrast, at least until the emergence of Ulysses S. Grant and William Sherman as the two leading commanders of the Union forces, the North had been able to muster only a succession of timid and inept generals who frittered away the advantages they so abundantly possessed.

Reinvigorated by Grant and Sherman, the North prevailed. The razing of Atlanta in September 1864 was followed by Sherman’s “march to the sea” at Savannah, Georgia. Completed in December, it left a 60-mile- (96.5-km-) wide swathe of destruction, deliberately targeting civilian property. “War is cruelty,” Sherman asserted. “The crueler it is, the sooner it will be over.”

**A new freedom**
The US Civil War was the world’s first major industrial war, the first to make widespread use of railroads, and the first widely reported in a new kind of popular press. There was concentrated death on a scale never seen before: around 670,000 dead, 50,000 of them civilians, in little more than four years.

For Abraham Lincoln, the war represented what in the Gettysburg Address he called “unfinished business.” The Constitution had left unresolved the question of how slavery could exist in a nation “conceived in liberty.” Despite the destruction and the huge death toll, the war brought a chance at “a new birth of freedom.” The end of slavery, confirmed by the Thirteenth Amendment in 1865, represented an opportunity for the US to be recast as a genuinely free land for all its citizens, black and white.

This Thomas Nast illustration shows life for black Americans before and after emancipation. Abraham Lincoln is also portrayed.
OUR MANIFEST DESTINY IS TO OVERSPREAD THE CONTINENT

THE CALIFORNIA GOLD RUSH (1848–1855)

IN CONTEXT

FOCUS
American expansion

BEFORE
1845 Texas, formerly part of Mexico, is incorporated into the United States.
1846 Britain signs Oregon over to the United States.
1848 New Mexico and California are annexed after the Mexican–American War.

AFTER
1861 The first transcontinental telegraph line is completed; the Pony Express mail service closes two days later.
1862 The Homestead Act grants 160 acres of free land to anyone settling it.
1869 The first transcontinental railroad is completed.
1890 The US Census Bureau closes the American frontier, since no more large areas of land are unsettled.

Knowledge of the lands in the American West encourages an interest in settlement there.

The gold rush in California sparks a global frenzy to share in the new riches, accelerating the settlement of the West Coast.

Telegraph and railway lines improve links between the east and west coasts.

American Indians are forced away from their ancestral lands.

Better communications spur the development of industry in the United States.

The belief by sometime journalist John L. O’Sullivan that the “manifest destiny” of the United States lay in its expansion to the west was boosted immensely by the discovery of gold in a river in northern California in January 1848. Even allowing for the inevitable difficulties of communication and travel at the time, the find sparked a frenzied reaction. Over the next five years, as many as 300,000 “49ers”—a reference to the year in which the influx began in earnest—were drawn to what, in 1850, would become the 31st state of the US. The immediate consequence was both a wild lawlessness in the pursuit of instant riches and the confirmation of America’s Pacific coast as a promised land. The
population of San Francisco, the main point of entry, was hardly 200 in 1846. By 1852, it was more than 30,000, and by 1870, it was 150,000. A handful, mostly early arrivals, made fortunes, while some made modest profits, and most made nothing at all. The California gold rush seemed a national obsession. In reality, it was no more than an extreme instance of the determination to colonize North America by the United States that was underway long before the gold had been found. By 1803, Vermont, Kentucky, Tennessee, and Ohio had become states. In addition to the annexation of Texas in 1845, a further 13 states had been added by 1848. In the same year, New Mexico and California were also seized from Mexico.

**New technologies**

To reach California, the 49ers endured journeys of astonishing hardship, traveling by wagon across the immensities of the Great Plains or by ship around Cape Horn, and sometimes across the Isthmus of Panama. Six months was the expected minimum for these enormous undertakings.

However, an extraordinary resolution to link these vast new territories was being forged, harnessing new technology in pursuit of nation-building on an epic scale. In 1861, the first telegraph line was established between the east and the west coasts. In 1869, the first transcontinental railroad line was completed, slashing journey times: by 1876, it was possible to travel from New York to California in three and a half days.

**Settlers and victims**

Immigration was the fuel that powered these transformations, the new lands demanding a vast influx of new settlers. In 1803, the US population stood at 4 million. By 1861, it was 31 million; and by the turn of the century, 76 million. There were inevitable costs to such rapid growth, and American Indians paid the highest price. Driven off their tribal lands with relentless brutality, their numbers dropped from perhaps as many as 4.5 million to 500,000. Herded into reservations, their traditional way of life destroyed, they were helpless in the face of this seemingly irresistible expansion.

**The Battle of the Little Bighorn**

Gold was behind the most famous confrontation between the new settlers of the west and the native populations: the Battle of the Little Bighorn on June 25, 1876. The US government authorized the settlement of the Black Hills of South Dakota after gold was discovered there. By doing so, however, it broke a treaty with the Sioux of the Great Plains. When, in return, substantial numbers of Sioux and Cheyenne refused to move to reservations, federal cavalry were sent to Montana to round them up. Among them was a troop of 600 under Lieutenant Colonel George Custer. Some 200 of these men, led by Custer himself, discovered the Indian encampment in the Little Bighorn Valley. In just one hour, the combined American Indian warriors, led by Sitting Bull, killed Custer’s entire force. Their deaths renewed the government’s determination to force the Sioux and Cheyenne into reservations at any cost.
By the mid-19th century, the world was experiencing an unprecedented boom in population, particularly in Europe. This increase would continue into the 20th century and beyond. It was partly due to improvements in health, backed by more ready access to food as a consequence of improved agricultural methods. It was also a result of industrialization and urban growth, as well as the affluence and improved living standards that both produced. Political stability played a role, too. After the defeat of Napoleon in 1815, Europe enjoyed almost 100 years of largely unbroken peace.

IN CONTEXT

FOCUS
Mass migration and population growth

BEFORE
1840s The Irish potato famine leads to mass emigration.
1848 The failure of liberal revolutions sparks large-scale German emigration.
c.1870 Major emigration of Jews from Russia begins as they flee persecution.
1882 Restrictions are placed on the entry of Chinese into the United States.
1880s Mass emigration from Italy begins.

AFTER
1900 The population of Europe reaches 408 million; the United States, 76 million.
1907 The largest number of immigrants in a single year enters the United States: more than 1 million.
1954 Ellis Island closes.
Nature also had a hand in the increase in migration. The Irish potato famine of the 1840s, resulting from a failed crop, may have been the last major European famine, but it brought suffering on a startling scale: up to 1 million people died. It provoked among survivors a vast wave of emigration of over 1 million, almost all to the US. The population of Ireland in 1841 was 6.5 million; by 1871, it had dipped to 4 million.

**Urban underclass**

Industrialization produced a similar paradox. Whatever the civic pride and bombast of the immense new urban centers of the Industrial Revolution, especially in Britain, a new urban underclass was being created, desperately impoverished and living in extreme squalor.

For the citizens of continental Europe, the lure of new lands in which to be free and prosper would prove irresistible. Substantial numbers of Germans, Czechs, and Hungarians left central Europe after the suppression of the nationalist revolts of 1848. From 1870, huge numbers of Russian and Polish Jews—1.5 million in 1901–10 alone—similarly emigrated, fleeing anti-Semitic pogroms.

The numbers involved in this huge transfer of populations were remarkable. From the mid-19th century to 1924, 18 million people emigrated from Britain, 9.5 million from Italy, mostly from its deprived south, 8 million from Russia, 5 million from Austria-Hungary, and 4.5 million from Germany. Between 1820 and 1920, the US attracted 33.6 million immigrants, where they often found themselves in poor living conditions in rapidly expanding cities such as Chicago and New York, aiding the growth of American industry with their cheap labor. Over the same period, 3.6 million Europeans settled in South America, and 2 million in Australia and New Zealand.

**Unwelcome guests**

This process of relocation was not exclusively European. Indians settled in South Africa, Chinese migrants spread across the East Indies, and Japanese migrants settled in California; many found themselves unwelcome.

There were also victims of enforced emigration. Unknown numbers of black African slaves were still being shipped around the world.

By 1910, more than one in seven of the US population had been born outside of the United States.

---

**Ellis Island**

Opened on January 1, 1892, Ellis Island, along with the Statue of Liberty, became a symbol of the vast stream of immigrants that poured into the United States. This immigration center processed perhaps 12 million people, and it is claimed that as much as 40 percent of the immigrant population of the United States has at least one relative who was fed through this immense bureaucratic machine. Built on nothing more than a nondescript sandy island, close to the New Jersey shore in New York Harbor, Ellis Island had at its heart a vast, echoing hall. Here, shuffling forward, the newly arrived immigrants, speaking a dazzling array of languages, would be processed. They were examined medically before being subjected to a series of simple questions to establish their eligibility. The great majority would then become accepted as citizens of the United States, with scarcely 2 percent turned away. Ellis Island finally closed its doors on November 12, 1954.
The overthrow in 1868 of the Tokugawa shogunate, rulers of Japan for 250 years, was led by feudal barons from the southern provinces of Choshu and Satsuma and was the direct consequence of its weakness in the face of aggressive demands by the United States, Britain, Russia, and the Netherlands to establish trading links. In place of the shoguns, the pliant 14-year-old Meiji emperor would “exercise supreme authority.” The goal of the barons was not to take over and maintain Japan as it had existed under the shogunate—rigidly hierarchical and deliberately isolated from the wider world.
This image of Yokohama in 1874 depicts the modernity of Meiji-era Japan in the form of steam-powered trains and ships, which also served to open up the country to trade.

The spur to modernization had largely been the fear that Japan, like China, would become another Western colonial pawn. In fact, the opposite occurred.

**Military expansion**

By the 1890s, Japan was a colonial power. In 1894, Korea had asked both Japan and China to help curb an insurrection there. When both countries later sought to take over Korea, the Japanese swept the Chinese aside, and then demanded and received possession of Taiwan, as well as rights in Manchuria. Here they came into conflict with Russia. The Japanese victory in 1905 over a disorganized Russian fleet at the Battle of Tsushima Strait was the first time an industrial European power had been defeated by an Asian power. Japan had the world’s attention.

**Emperor Meiji**

Important not as a statesman or as the ruler of Japan in the sense of exercising actual power, Emperor Meiji (1852–1912)—whose personal name, never used, was Mutsuhito—was instead the symbol of the reborn Japan. Until the restoration of Meiji in January 1868, the emperors of Japan were little more than a symbol. Under the shogunate, they were obliged to remain invisibly at the royal palace in Kyoto more or less permanently. Strictly speaking, the “restoration” never happened: Meiji had already become emperor in February 1867, following the sudden death of his father, Emperor Komei.

For those ambitious daimyo, or feudal barons, who were determined to drive Japan into the modern world, elevating the emperor to a higher profile bestowed legitimacy on what was otherwise an act of usurpation. It is telling that one of their first acts was to force the emperor to move to Edo, which was renamed Tokyo in 1868, the former residence of the shogun. Meiji himself remained an impenetrable cypher to the end.
IN MY HAND I WIELD THE UNIVERSE AND THE POWER TO ATTACK AND KILL
THE SECOND OPIUM WAR (1856–1860)

IN CONTEXT
FOCUS
Decline of imperial China

BEFORE
1793 Lord Macartney’s trade mission to China is rebuffed.
c.1800 Opium is increasingly used to pay for Chinese goods, sparking a balance of payments crisis.
1839–42 The First Opium War ends with Hong Kong ceded to Britain and five Treaty Ports opened.
1850–64 The Taiping Rebellion brings China close to complete disintegration and kills millions.

AFTER
1899 The anti-Western Boxer Rebellion is put down by an eight-nation foreign force. It signals the effective end of Chinese imperial authority.

Despite China’s great wealth, Western powers are allowed very restricted access to Chinese ports.

Western merchants use opium to pay for goods, damaging China’s economy.

The First Opium War is sparked by Chinese attempts to stop the opium trade.

The Second Opium War leads to further crippling territorial and trading concessions.

Unable to resist the West, China sees its status diminished internally and externally.

On October 6, 1860, after years of sporadic conflict known as the Second Opium War, an Anglo-French force seized the imperial capital of Peking (today Beijing), in China, to force the Chinese to submit to trading concessions. The point was underlined when the Europeans burned down the emperor’s sumptuous Summer Palace. The Chinese agreed to talks, and the resulting Peking Convention not only increased the number of Treaty Ports open to Western trade, but British and French zones of influence were extended in south China and along the fertile Yangtze River.
The port of Canton, in southern China, was initially the only trading port open to Western merchants. After the two opium wars, Europe was given exclusive access to many more.

Less than 70 years before, Britain had sent an embassy to China to open trade talks, only to be rebuffed. Late 18th-century Qing China was the richest, most populous, and most powerful country in the world, and it could afford its complacency. By the mid-19th century, however, the nation was effectively bankrupt, racked by famines and revolts, and increasingly exploited and humiliated by the West.

Uprisings and revolts
China’s problems were internal as much as external. A swelling population—100 million in 1650, 300 million in 1800, 450 million in 1850—provoked recurring famines. Between 1787 and 1813, there were three major uprisings. Its border provinces, conquered at huge expense in the 17th and 18th centuries, were in a near-permanent state of unrest.

In 1850, the Taiping Rebellion erupted across central China, resulting in the death of as many as 20 million people. When it was finally put down, in 1864, it was only after Western intervention. The Qing dynasty, its administration increasingly ineffective, had essentially lost control of China.

The West intrudes
It was this growing turmoil that the West exploited, weakening China further in the process. The first, modest trading concessions China had agreed to stipulated that all Chinese goods be paid for in silver. However, from the early 19th century, European traders, mostly by bribing officials, were increasingly able to use opium, cheaply grown in India, to pay for goods. By the 1820s, 5,000 chests of opium a year were entering China.

The Chinese attempt to end the opium trade and its debilitating effects led to a crushing defeat in the First Opium War of 1839–42, with the European powers, Britain above all, extracting substantial trading concessions. It was Western insistence in 1856 that these concessions be extended that led to the Second Opium War, concluded in 1860 by the Peking Convention. By 1900, a string of Western trading ports were scattered along the Chinese coast. Britain, France, Japan, and Russia now all controlled what had been Chinese tributary states on its borders. China, wracked by turmoil, was effectively disintegrating.

The Boxer Rebellion
In the turmoil of late 19th-century China, it was inevitable that efforts would be mounted to end the growing dominance of the West. The imperial government in Beijing made a last-ditch attempt at reform on Western lines, but the chaos came to a head in 1899 with the Boxer Rebellion, mounted by the Militia United in Righteousness, a semi-secret society composed mostly of young men. Its goal, to be achieved in part thanks to their deluded belief that they were invulnerable to Western weapons, was the overthrow of all Western interests. The rebellion was variously supported and opposed by the imperial court, uncertain whether it represented a means of salvation or would merely provoke Western reprisals. The latter proved to be the case. An eight-nation military alliance, including Japan, was sent into China against the Boxers, and by September 1901 the rebellion had been crushed, amid scenes of indiscriminate violence.
I OUGHT TO BE JEALOUS OF THE EIFFEL TOWER. SHE IS MORE FAMOUS THAN I AM

THE OPENING OF THE EIFFEL TOWER (1889)

The opening of the Eiffel Tower on March 31, 1889 was a startling assertion of Parisian bombast in the years between the humiliations of the Franco-Prussian War in 1870–71 and the outbreak of World War I in 1914. This was the Belle Epoque, a time when Paris could—and did—confidently proclaim itself the City of Light, supremely cosmopolitan, the art capital of the world, and the epicenter of civilized living. Paris was the city reborn, and over it now soared Gustave Eiffel’s tower, at 984ft (300m) not just the tallest structure in the world, but a triumphant monument to technological progress.

The ideal city
Modern Paris was the creation of Napoleon III. Beginning in 1853, the French emperor had whole districts knocked down, replacing medieval buildings and tangles of tiny streets with imposingly vast boulevards. It was urban planning on a scale never seen before. Train stations were built, water supplies improved, sewers constructed, parks laid out, and stunning vistas created. The goal was a model city, one that would reflect not just the glory of France but also its mastery of the modern age.

It was a process mirrored in cities across the industrial West. In 1850, there were three European cities with populations larger than 500,000: Paris, London, and Constantinople. Fifty years later, there were nine with populations larger than 1 million, and by 1900, London was the largest city in the world, with 6.5 million inhabitants. The same dizzying growth occurred in the US,
Industrialization and emigration draw millions of people to cities across the Western world.

Squalor and disease afflict the new urban poor, subsisting in slums.

Infrastructure—sanitation, transport, and street lighting—becomes a priority.

Social reformers argue that living conditions for all must be improved.

The opening of the Eiffel Tower is seen as an affirmation of civic pride.

Better living conditions and higher wages in cities lead to the birth of mass consumerism.

too—between 1850 and 1900, the population of Chicago, for example, tripled, from 560,000 to 1.7 million.

Difficulties and inventions
The initial consequence of this population explosion was quite staggering urban squalor. Diseases such as cholera and typhoid were commonplace. It became clear that the infrastructure demanded by any modern city had to include not just adequate public transport and well-lit streets, for example, but major improvements in public health—above all, sanitation.

The shift in the quality of life in these great metropolises was extraordinary. It was paralleled by the rapid development of mass consumerism, the direct consequence of improved living standards, shorter working hours, and compulsory education, with basic literacy and numeracy now increasingly commonplace. It was an age of music halls and popular theater, and subsequently of the cinema; of the phonograph; of mass-circulation newspapers; and of a growing interest in sports.

Just as central to this age of growing affluence and increased leisure—at least for some—were the first department stores. These were a conspicuous part of a retail revolution that was coupled, from the 1870s, with an advertising explosion, with color posters mass-produced for the first time. And from the 1890s in the United States, cityscapes were further changed by a new type of building: skyscrapers. Just as the Eiffel Tower before them, they rapidly became symbols of the transformation in urban life.

Between 1800 and 1900, the population density in New York rose from 39,183 per square mile to 90,366, and the congestion was worsening as public transportation took up valuable land. A solution favored in the United States was an elevated railway—a train line raised above the streets on steel girders. The first was opened in New York in 1868.

In the UK, the same space constraints led to the birth of the underground railway. The first, using conventional steam engines, was London’s Metropolitan Railway, which opened in 1863 and linked Paddington and King’s Cross stations with the City of London. Soon extended and combined with the District Line, by 1871 it encircled almost the whole of central London. The city’s first electric underground service—faster, quieter, and much less dirty—was opened in 1890. Paris followed suit with the opening of the Métro, named after the London line, in 1900, and the first US underground service opened in Boston in 1897.
The Berlin Conference did not precipitate the sudden European takeover of Africa after 1880 but, rather, confirmed Europe’s self-asserted right to impose itself on a continent deemed backward, ignorant, and savage. Called by Otto von Bismarck, Germany’s chancellor, the conference was held over the winter of 1884–85 and attended by representatives from 14 countries. It was intended in part to legitimize a more or less enforced subjection of Africa and, by setting agreed rules of colonization, to avoid conflict between Europe’s colonial powers, France and Britain most obviously. 
It was also seen as a way to end the slave trade, not least by the actions of Christian missionaries. At the same time, it paved the way for Germany and Belgium, two nations with no history of colonial rule, to become major imperial powers. For Germany, this was little more than a logical next step in its challenge to Britain and France. If they could boast vast colonial possessions, Germany felt it should, too.

The European takeover
Before colonization, Africa possessed a variety of states and territories, some quite precisely defined, some amorphously tribal—there was an extreme contrast between the sophistication of Egypt, for example, and the Congo in tropical Africa. At the same time, much of the north was Muslim. The first European holdings in Africa were coastal trading forts, sustained by gold and the slave trade. The interior remained impenetrable, but as it was revealed from the early 1800s, European control of Africa gained momentum.

The subsequent heightening of tensions resulted in the near-complete reduction of Africa to European rule. African colonies were essentially artificial creations, lines drawn on maps to suit the colonizing powers. They took no notice of local histories and cultures, and any local resistance to colonization was invariably crushed by military means.

Belgian and German rule
In 1885, Leopold II, the King of the Belgians, proclaimed the establishment of the Congo Free State, an area 76 times larger than Belgium. Presented as a model colony, dedicated to humanitarian ends and free trade, in reality it was anything but. Treated by Leopold II as his personal possession, the Congo witnessed brutalities on a near-genocidal scale. The exact numbers can never be known, but it is believed that between 2 million and 10 million Congolese died. Conditions in German southwest Africa, suddenly taken over after 1884 and today part of Namibia, were equally brutal. The true price of the riches produced by Africa for its European masters—ivory, rubber, gold, and diamonds—was extraordinary suffering.

There was no more ardent exponent of British imperial rule in Africa than Cecil Rhodes (1853–1902), financier, statesman, and relentless imperialist. He envisaged a continuous body of British colonies that would run north and south across Africa, linking the two strategically vital extremities of Africa: Cape Town and Cairo. Having made his fortune mining and selling diamonds in South Africa, he dedicated the rest of his life to this audacious vision. He was able to carve out new British territories in Northern Rhodesia (now part of Zambia) and Southern Rhodesia (now Zimbabwe), which were both named after him. As the prime minister of Britain’s Cape Colony from 1890, his relentless scheming to topple the Boer republics led to his eventual political demise in 1895. He remains perhaps the most striking example of the unashamed imperialist, not just permanently ready to extend British colonial control, but convinced that it was his duty to do so in the interests of what seemed to him a self-evident European fitness to rule.
MY PEOPLE ARE GOING TO LEARN THE PRINCIPLES OF DEMOCRACY, THE DICTATES OF TRUTH, AND THE TEACHINGS OF SCIENCE

THE YOUNG TURK REVOLUTION (1908)

Ottoman Turkey finds itself increasingly unable to keep control of its empire and match Western powers.

The Ottoman sultanate attempts Westernizing reforms, but these efforts are half-hearted.

The rule of Abdul Hamid II proves repressive and corrupt, ever more at the mercy of Western financial interests.

Defeat in World War I shatters the Ottoman Empire but leads to the formation of a secular republic.

The Young Turk Revolution instigates modernizing reforms. It is unable to offer any lasting solution to Turkey’s declining power.

T

he Young Turk Revolution of July 1908 was instigated by nationalistic army officers dismayed by the territorial losses of the Ottoman Empire. It forced the sultan—the Ottoman ruler, the ineffective but repressive Abdul Hamid II—to reintroduce the constitutional monarchy that he had suspended in 1878 in favor of personal rule after only two years. In 1909, he was forced to abdicate in favor of his brother, Mehmed V, who was merely a figurehead.

The revolution did very little to halt the Ottoman decline, tending mostly only to highlight
tensions between those who championed Turkish Islamic values and those liberals who believed only Western-style reforms could save Turkey.

**Territorial decline**
In 1800, despite repeated defeats at the hands of the Russians, Ottoman Turkey still ruled over a vast multinational empire that stretched across the Balkans, the Middle East, and North Africa. From 1805, it lost control of Egypt, which became effectively independent under one of the sultan’s generals, Muhammad Ali.

In 1830, the year that France began its conquest of Algeria (completed in 1857), Greece won its independence; and by 1878, Serbia, Montenegro, Bulgaria, and Romania were similarly independent in all but name. In 1881, Tunisia, too, was taken over by France.

Following the Young Turk Revolution, the relentless decline of Ottoman Turkey continued. In 1911, Libya was lost to Italy, while the Balkan Wars of 1912–13 saw the surrender of almost all of Turkey’s remaining European territories.

**A fateful alliance**
Following the Balkan crisis, the Ottomans’ military government launched a drive to modernize the country along Western lines.

In October 1914, Turkey entered World War I as an ally of the Central Powers—Germany and Austria-Hungary—convinced that German military aid would allow it to reassert its potency. This was a calamitous mistake, and defeat in 1918 saw Turkey reduced to its Anatolian heartlands, its remaining Middle East territories lost, largely carved up between Britain and France.

The traumas of Turkey’s defeat in World War I were underlined in 1920 by the Treaty of Sèvres, largely a Franco-British imposition. This confirmed the loss of Ottoman territory and also awarded much of western Turkey to Greece, provoking an immediate nationalist backlash led by Mustafa Kemal, as well as the overthrow of the last sultan, Mehmed VI.

The Turkey that emerged under Kemal, subsequently styled Atatürk (“Father of the Turks”), was exactly the centralized Western-style and, importantly, secular state that nationalist reformers such as the Young Turks had argued for.

---

**Kemal Atatürk**

Mustafa Kemal, better known as Atatürk (1881–1938), the name he assumed in 1934, was the founder and first president of the republic of Turkey. Born in 1881, he took part in the Young Turk Revolution as an army officer. Later, he served with distinction in the Gallipoli campaign of 1915–16, which repulsed a joint Franco-British attempt to conquer western Turkey.

After the Turkish defeat in World War I, Atatürk established a provisional government. As leader of the Turkish Nationalists, he played a central role in driving the Greeks from mainland western Turkey. With the country’s borders confirmed by the Treaty of Lausanne of 1923, the West effectively agreeing to the establishment of a new Turkish republic, Atatürk launched a radical program of social and political reforms intended to transform the nation into a modern, Westernized republic. However painful the process of dragging Turkey into the modern world, under Atatürk the country indeed emerged as a coherent, secular political entity.
DEEDS NOT WORDS
THE DEATH OF EMILY DAVISON (1913)

IN CONTEXT
FOCUS
Women's suffrage

BEFORE
1869 In the US, the National Woman Suffrage Association and American Women Suffrage Association are formed.
1893 New Zealand is the first country to grant women the vote.
1897 The National Union of Women's Suffrage Societies is formed in Britain. It campaigns peacefully for the right to vote.
1903 Emmeline Pankhurst forms the Women's Social and Political Union in Britain. Vote campaigns grow violent.

AFTER
1917 The National Women's Party begins a 30-month protest at the White House.
1918 All women 30 or over are granted the vote in Britain.
1920 The vote is granted to all American women 21 and over.

More women are educated and hold professional posts, raising expectations for them to have the right to vote.

Societies are established to campaign for women's suffrage, particularly in Britain and the United States.

Militant campaigners from Britain's Women's Social and Political Union are arrested and imprisoned.

Emily Davison's death raises the profile of women's suffrage across the world.

Women's war work emphasizes their capabilities. British women win the vote in 1918; American women, in 1920.

On June 4, 1913, Emily Davison stepped onto the course at the Derby, England's premier horse race, and was knocked to the ground by a horse owned by King George V. She died four days later. It is unclear if this was a protest that went wrong or an active attempt at martyrdom.

However, the intended disruption was typical of the Women's Social and Political Union (WSPU), which Davison had joined in 1906.

Britain: the suffragettes
Women in the West had begun to feel that they, and by extension those elsewhere, should no longer...
as the vote-seeking women were by now mockingly known, became increasingly violent. Chaining themselves to public buildings and the disruption of meetings escalated into the smashing of shop windows, acts of arson, and bombings.

The more active members of the WSPU were repeatedly arrested and imprisoned: Pankhurst received seven prison sentences; Davison, nine. In 1909, the WSPU began to stage hunger strikes in prison; in response they were force-fed—a painful and degrading process.

**The US: the suffragists**

The experience of what in the US were known as the suffragists had clear parallels. The Women’s Christian Temperance Union campaigned peacefully for women’s rights, arguing that women could not influence political decisions—in this case, Prohibition—without having the right to vote.

However, the National Women’s Party (NWP), established in 1916, imitated the militant tactics of Britain’s WSPU. This was no surprise, given that its founder, Alice Paul, had been a member of the WSPU from 1907 to 1910 and had been sent to prison three times. The NWP’s so-called Silent Sentinels, protesting outside the White House from January 1917, were also arrested and force-fed.

**Success at last**

At the outbreak of World War I, the WSPU stopped campaigning, mobilizing itself instead in support of the war effort. The contribution made by women during the war plainly demonstrated just how much wider their role could be than that traditionally expected of them as wives and mothers. In 1918, all British women aged 30 or over were granted the right to vote. In 1928, suffrage in Britain was extended to women aged 21 or over.

Meanwhile, in the United States, the NWP continued its protest into 1919, when Congress approved the Nineteenth Amendment, which was ratified the following year, granting women the same voting rights as men.

---

**Emmeline Pankhurst**

The best known of all the suffragettes, Emmeline Pankhurst (1858–1928) epitomized a new breed of politically active women in the early 20th century. She was born into—and later remained in by marriage—an eminently respectable, somewhat left-leaning middle-class world in the north of England, which only served to cement her desire to further the cause of women’s rights. This decision would prove explosive. She was single-minded, exceptionally active, and wholly unflinching in her refusal to compromise. Her leadership of the WSPU exhibited a determination to take the fight for women’s suffrage into the heart of what she saw as the enemy camp. Her increasing readiness to use more violent methods to secure suffragette goals alienated many who may otherwise have been her natural supporters—women as much as men. Nonetheless, her absolute refusal to back down, coupled with the fervor she inspired in her followers, introduced a new mood of feminist militancy into a complacent masculine political world.
THE PARTITIONS OF POLAND
(1772–95)

From 1569 to the 18th century, Poland and Lithuania were united in a large federated commonwealth that occupied an extensive area of northern Europe. In 1772, the powerful neighbors of the commonwealth—Austria, Prussia, and Russia—encroached on its territory in a series of annexations, diminishing it until they absorbed it fully in 1795. Russia took over the eastern half of the country; Prussia, the north; and Austria, the southern and central parts. The elimination of the Polish state bolstered these three great European powers, leaving Polish patriots to struggle for independence, which they achieved in 1918.

THE SIKH EMPIRE IS FOUNDED
(1799)

Maharaja Ranjit Singh brought together a group of Sikh states in and surrounding the Punjab region of northern India to create a powerful Sikh Empire in 1799. For its creation and defense, it drew on the Khalsa, the powerful united army that had been created in the 1730s by Sikh leader Nawab Kapur Singh. The empire lasted for 50 years before falling to the British. Although not long-lasting, it helped to strengthen Sikh unity and confirmed the close identification of the Sikhs with the Punjab region.

THE WAR OF 1812
(1812–15)

In 1812, the United States declared war on Britain over a number of issues, including trade restrictions, British commandeering of US merchant seamen, and the support lent by Britain to American Indian peoples who opposed US expansion into their lands to the west. The conflict took place on several fronts across North America and involved a failed US invasion of Canada, the burning of the city of Washington by the British in 1814, and a major US victory at New Orleans in 1815. After more than two years of fighting, the status quo was largely restored. However, the war gave the US a stronger sense of nationhood and confirmed that Canada remained part of the British Empire.

THE TRAIL OF TEARS
(1830)

In 1830, the US Congress passed the Indian Removal Act, which granted Native Americans lands west of the Mississippi in return for them surrendering their lands within existing state boundaries in the east. Although the removal was in theory voluntary, in fact it resulted in the eviction of tens of thousands of people from their homelands on a forced westward march that became known as the Trail of Tears. The people forced to move were mainly Cherokee, Chickasaw, Choctaw, Creek, and Seminole. Among the Cherokee alone, some 4,000 died during the march.

THE IRISH FAMINE
(1845–49)

In the 1840s, the rapidly growing rural population of Ireland suffered a series of disastrously poor crops of their staple food, the potato. These bad harvests, due to potato blight that spread rapidly in the damp weather, led to about 1 million people dying of starvation, while another million emigrated either to Britain or North America. After the famine ended, emigration, especially to the US, continued as landlords evicted tenants as part of estate “rationalization.” The famine was a terrible and pivotal event in

THE RISE AND FALL OF THE ZULU KINGDOM
(c.1816–87)

Shaka, ruler of a small Zulu chiefdom, was a dynamic leader who formed a Zulu state after 1816 by conquering and uniting a large number of groups of the Nguni people of southeast Africa. The Zulu kingdom had to contend with two belligerent groups of incomers: the Boers (descendants of Dutch settlers at the Cape) and the British. The British invaded Zulu territory in 1879 and, after suffering an initial defeat at Isandlwana, overwhelmed them with their firepower. The British divided up their kingdom, eventually adding Zululand to their empire.
Irish history: Ireland’s population has never risen back to its pre-famine level and bitterness about the British government’s poor response to the famine remains.

**THE TAIPING REBELLION**
*(1850–64)*

By the mid-19th century, Qing rule in China had become corrupt, and there were many who wanted change. Among various anti-government groups was one led by a religious leader, Hong Xiuquan. Hong’s followers attacked Nanjing and took the city in 1853. The rebellion grew and spread across virtually all of China until it became a war with hundreds of thousands of fighters involved. With European military aid, the Qings eventually managed to crush the rebels, and millions of soldiers and civilians were killed. Despite its failure, the Taiping Rebellion fatally weakened the Qing regime, which only survived for another half century, increasingly prey to foreign powers.

**FRANCE RETURNS TO A REPUBLICAN GOVERNMENT**
*(1870)*

In 1870, Emperor Napoleon III of France surrendered at the Battle of Sedan, during the Franco-Prussian War, and he was taken prisoner. The French parliament declared a republic, expecting it to form an interim government until a new monarch was chosen. However, it proved impossible to decide on a constitutional framework for a new monarchy, or on who should take the throne. After elections in 1871, the Third Republic became permanent, with a president as head of state and a Chamber of Deputies, elected through universal male suffrage, to make the laws. The Third Republic lasted until 1940 and set the pattern for French government after World War II.

**THE CRIMEAN WAR**
*(1853–56)*

When war broke out between Russia and Turkey in 1853, France and Britain intervened in support of Turkey, sending a joint force to invade the Crimea and besiege the Russian port of Sebastapol. There were huge numbers of casualties, particularly on the Russian side, before Russia agreed to peace terms. Blunders such as the British cavalry’s infamous, suicidal Charge of the Light Brigade made the war notorious for the needless waste of human life. The Crimean War also came to be associated with the efforts of health reformers such as Florence Nightingale, who worked to improve the nursing service offered to the wounded and to improve training for nurses in both military and civilian hospitals.

**THE (SECOND) BOER WAR**
*(1899–1902)*

The war of 1899–1902 was the second conflict between the Boers (South Africans of Dutch descent) and the British. After initial Boer victories, the British defeated their enemies by applying a “scorched earth” policy in the areas of the country in which the Boers had fought successfully as guerrillas, and capturing women and children. Some 20,000 died in concentration camps, and the Boers lost their independence. The war reduced many surviving Boers to poverty, but it also spurred on their nationalism and indirectly led to Afrikaaner dominance of South Africa’s government in the 20th century.

**A MAHDIST ISLAMIC STATE IS CREATED IN SUDAN**
*(1885)*

In 1881, the Sudanese leader Muhammad Ahmad declared himself the Mahdi (a messianic figure in some Muslim traditions) and launched a revolt against the government of Egypt, which ruled Sudan although Britain effectively controlled both countries. Ahmad laid siege to Khartoum, which fell in early 1885, in spite of a defense by Charles George Gordon, the British Governor-General. The Mahdists were finally defeated by Lord Kitchener in 1898, after which Sudan was ruled jointly by Britain and Egypt.

**THE MEXICAN REVOLUTION**
*(1910)*

Beginning in 1910 and initially led by Francisco Madero, the Mexican Revolution removed the dictator Porfirio Diaz, who had ruled for some 35 years. However, the new republic could not prevent armed factional struggles and civil war, which continued until the drawing up of a new constitution in 1917 and the election of a new government in 1920. The following two decades saw key reforms such as the redistribution of lands among peasants and Indian communities and, in 1938, the nationalization of oil.
Historical perspectives on events close to the present day are inevitably shifting and uncertain. A historian writing in the mid-20th century might have characterized the modern era as a period of catastrophe, in which all the economic and political gains of liberal civilization had been squandered. However, by the early 21st century it was tempting to see continuity with the pre-1914 world, as a globalized capitalist economy and great technological innovation were combined with rapidly rising population and productivity.

The two world wars

The convulsions of the period from 1914 to 1950 were on an epic scale. Two world wars between them caused the deaths of between 70 and 100 million people, making them by far the most destructive conflicts in history. Both European civilization and science—the twin pillars of the traditional 19th-century idea of “progress”—were tarnished by association with this slaughter. Germany, often considered one of Europe’s most “civilized” countries, descended into dictatorship and genocidal massacre. Science was used to create weapons of mass destruction, from poison gas to the atom bomb. Even in the interlude of relative peace between the world wars, global capitalism failed to function effectively, the economic misery of the Great Depression driving a retreat from democratic government and free markets.

To revolutionaries inspired by a Marxist vision, these upheavals seemed the death throes of the capitalist order. But the building of alternative “communist” societies, based on the model of a single-party state and a state-controlled economy, proved to be a costly experiment. In Russia, followed by China, communism succeeded in transforming relatively undeveloped countries into major industrial and military powers, but millions died as victims of the state, and citizens were denied fundamental freedoms.

A battle of ideology

World War II was followed by the Cold War confrontation between the “free world,” led by the United States, and the communist bloc. Instead of disarmament, there was a potentially disastrous nuclear arms race. Meanwhile, the main European powers, economically weakened and demoralized, found themselves in no position to sustain...
their empires against colonized populations eager for freedom. The newly independent nations became an ideological and even, at times, military battleground between the capitalist and communist systems.

In the end, the issue was settled by economics. Capitalism showed its ability to generate economic growth on a vast scale, creating a booming consumer society in more advanced countries. In contrast, by the 1980s communist countries confronted economic stagnation and rising popular discontent. With great rapidity, communist regimes collapsed in the Soviet bloc, while communist China later became a powerhouse of capitalism.

In the wake of communism, the political scientist Francis Fukuyama coined the expression the “end of history” and argued that Western liberal democracy was “the only game in town.” Certainly, by the end of the 20th century liberalism was surfing a wave: in 1950, only a few nations in Europe were democracies; 50 years later, all of them were.

**Progress and pessimism**

From the 1960s, hotly contested campaigns for civil rights had progressed liberal ideals in areas such as racial equality and gender politics. Growing prosperity was also impressive. In Latin America and much of Asia, living standards had risen dramatically by the early 21st century. Despite the world’s population increasing on a huge scale—from under 2 billion in 1914 to over 7 billion one century later—food supplies had not run out, as had once been predicted by many. Restricting environmental damage was recognized as a major challenge for the future, a problem generated by humanity’s growth and success.

Indeed, human progress in the 20th century was remarkable, from rising literacy and life expectancy to the development of air and space travel and computers. Yet there was no outbreak of general optimism. Environmental issues aside, it was all too evident that the future held potential dangers: the unsettled politics of the Middle East, sucking major powers into wars; brutal acts of terrorism; economic inequality generating mass migration; financial instability and market breakdown; epidemics spread by global travel—all provided plenty of material for pessimists. History offered no solid ground for predictions, suggesting only that the unexpected was to be expected.

YOU OFTEN WISH YOU WERE DEAD

THE BATTLE OF PASSCHENDAELE (1914)
Passchendaele, officially known as the Third Battle of Ypres, was a large-scale attack against the German front line around Ypres, Belgium, during World War I. The Allies' aim was to advance into Belgium and free the German-held ports on the Belgian coast, which the Germans had been using to attack British shipping. The biggest challenge was to break through the defensive positions taken by the Germans on the West Flanders Ridge. Key to the breakthrough was seizing the village of Passchendaele.

Preparations for the battle began on June 7, 1917 with a heavy two-week bombardment of German positions. The infantry offensive began on July 31, 1917. Within days, the Allied forces were stuck in mud as torrential rain turned the area into a quagmire. By the time the Allies—made up of British, French, Canadian, and Australian troops—captured Passchendaele on November 6, the village was in ruins. The conflict cost 300,000 Allied lives, with a gain of 5 miles (8km), while the Germans lost 260,000 of their troops. It was hailed as a victory by the British government but became a byword for the utter futility of war.

Secret diplomacy
Two main disputes led to World War I: one between Germany and France, and the other between Russia and Austria-Hungary. The long history of mutual antipathy between Germany and France came to a head in 1870 with France's humiliating defeat by Germany in the Franco-Prussian War.

Life in the trenches
At the outbreak of World War I, both sides anticipated fast-moving battles that would cover hundreds of miles. None expected a static fight with their forces deep in defensive trenches.

Early trenches were small furrows, but they grew more elaborate, fortified with wooden frames and sandbags. German trenches were more sophisticated and had electricity and toilets. Soldiers spent daylight hours avoiding enemy fire and endured periods of boredom and daily chores, broken up with spells in reserve and short rest periods.

The trenches sometimes filled up with rats and lice, as well as water, which turned to ice. Life in such conditions was exhausting, and soldiers had a repetitive diet of canned food and few comforts.

Snipers shot at any heads that appeared over the parapet, and raiding parties throwing grenades were a constant danger. The trenches were bombarded with shells, bullets, and poisonous gas. It was a relentless war of attrition—smelly, dirty, and riddled with disease.
war, which led to the annexation of most of the French provinces of Alsace and Lorraine.

In Eastern Europe, the Austro-Hungarian and Russian empires had a long-standing dispute over which of them had the strongest claim to power in the Balkans. Both depended on the area for access to the Mediterranean, and each eyed the movements of the other with intense suspicion.

Each state needed allies, and in 1882 Austria-Hungary, Germany, and Italy signed a Triple Alliance promising to give each other military support in case of war. Then, in the 1890s, Russia and France signed an agreement to protect one another in the event of a war against Germany. By the turn of the century, Kaiser Wilhelm II’s provocative nationalistic speeches and naval expansion pushed Britain into closer ties with France. In 1904, Britain and France agreed an *entente cordiale*, or friendly alliance, which was broadened into a triple entente, embracing Russia, in 1907. The triple entente would become known as the Allied Powers.

The atmosphere generated by this international jostling led to an increase in military spending by European governments and the expansion of armies and navies.

**War erupts**

A spark was all that was needed to ignite the flame of enmity between these two alliances. It came on June 28, 1914, when a Bosnian Serb assassinated Archduke Franz Ferdinand, heir to the Habsburg throne, in Sarajevo. The Austrians suspected Serbia, their principal enemy in the Balkans, of the attack. After securing support from its ally Germany, Austria-Hungary presented Serbia with an ultimatum on July 23, demanding that the Serbs stop all anti-Austria-Hungary activities. Serbia accepted most of the demands, but Austria-Hungary declared war on Serbia on July 28. Britain called for international mediation, but the crisis quickly escalated into European war. When Russia mobilized against Austria-Hungary, Germany declared war on Russia on August 1, and on France two days later. Britain joined the war on August 4, after the Germans invaded neutral Belgium. The British Expeditionary Force (BEF), »

The lamps are going out all over Europe. We shall not see them lit again in our lifetime.

**Sir Edward Grey**

*British Foreign Secretary (1914)*

...
a small professional troop led by Sir Douglas Haig, had arrived in France by August 22. It was deployed near the Franco-Belgian border, in line with pre-war military plans agreed with the French government.

Germany had to fight a war on two fronts. On the Western Front, in the first weeks of the conflict, the Germans invaded Belgium and France, but their advance was halted by the French and British at the Battle of the Marne. By the end of autumn, the two sides had reached a stalemate. Meanwhile, on the Eastern Front, the fighting remained fluid. Germany dominated, scoring a great victory against the Russians at Tannenberg, but its Austrian allies suffered several defeats.

On the Western Front, however, a 400-mile (645km) trench line stretched from the Belgian coast in the north, down through eastern France to the Swiss border. The two sides faced each other across the open space between their front lines. This area—no-man’s-land—had barbed wire fronting the trenches to slow the opposition. Continuous fighting from the trenches, punctuated by appallingly bloody battles, failed to break the deadlock. More than 600,000 Allied troops were killed or wounded in the Battle of the Somme alone.

**Total war**

At the start of the conflict, both sides had been convinced it would be a short, decisive battle. No one had anticipated a war of attrition. New mechanized weapons added to the high casualty rates. Tanks were used for the first time, and machine guns such as the German MG 08 Maxim could fire up to 600 bullets a minute. Aircrafts, first employed for reconnaissance, were later used for bombing. Both sides used poison gas. Horses were the backbone of logistical operations, but as the war progressed, railways and motor trucks were used to transport goods to the front.

Civilians were brought into the front line by the bombing of London and Paris by airships and bomber aircraft. By 1917, German submarines were sinking one in four merchant ships headed for Britain to try to starve the British into submission. Britain’s naval blockade of Germany also led to

**Huge artillery guns** such as the Howitzer cannon were transported by horses and tractors. High-explosive shells fired in massive quantities were key to the war’s high casualty rates.

**World War I** is also known as the Great War, due to the unprecedented number of participants. An enormous 65 million soldiers saw combat, almost a third of whom were wounded and half as many again were killed. In addition, 8 million civilians lost their lives. These high figures are a direct consequence of the array of devastating new weapons that were in use by all of the armies involved.
One of the social changes brought on by World War I concerned the role of women. The female population joined the war effort by working in places like munitions factories.

Global conflict

The key belligerent states brought their vast empires into war with them, and the conflict soon became a world war. German colonies in China and the Pacific were invaded by Japan, which entered the war on the side of the Allies. Germany’s colonies in Africa were overrun by British, French, and South African troops. In May 1915, Italy joined the Allies, fighting Austria-Hungary and Germany in the Alps.

In early November 1914, the Ottoman Empire, an Islamic power, abandoned its neutrality and declared a military jihad (holy war) against France, Russia, and Britain. The US was drawn into the war by German submarine attacks on commercial ships at sea, such as the one on British liner Lusitania in 1915, with 128 Americans on board. After a German plot to persuade Mexico into an anti-US alliance was discovered, Congress declared war in April 1917.

When the Bolsheviks in Russia negotiated a peace treaty with Germany at Brest-Litovsk on December 22, 1917, it seemed Germany had won a significant victory. They also made gains on the Western Front in 1918, but then, in July and August, the Allies counterattacked, beginning an advance that would continue until November. Four million fresh US troops helped defeat the Central Powers and bring the Germans to the peace table.

When the conflict ended, at 11am on November 11, 1918, the alliance led by France and Britain emerged victorious. More than 65 million troops had been involved in the war, of which at least half were killed or injured. The Russian, Austrian, and German empires had collapsed. After the war, the Treaty of Versailles redrew the map of Europe, leaving nations, particularly Germany, embittered. A public assembly of countries, the League of Nations, was founded to help maintain peace. However, the League proved toothless in the face of countries that chose to ignore it. When fascist Benito Mussolini came to power in Italy in 1922, he denounced the Treaty. In Germany, where the response to the Treaty was one of deep resentment, the Nazi Party began to gain momentum. Far from being “the war to end all wars,” World War I had instead sown the seeds of future conflict.

There was not a sign of life of any sort... Not a bird, not even a rat or a blade of grass.

Private R. A. Colwell
Passchendaele (1919)
In October 1917, Russia was in turmoil after suffering huge losses in World War I. There were food shortages, and workers in the cities faced low wages and appalling conditions. The February Revolution had ousted the Tsar, but the Provisional Government that replaced him faced imminent collapse.

Vladimir Lenin, a member of the revolutionary Bolshevik Party, took full advantage. He was committed to a workers’ (proletarian) revolution and set out a series of proposals to overthrow the government in what became known as his April Theses. His simple slogan “Peace, land, and bread!” became a revolutionary
rallying cry. On October 24 (November 6, Gregorian calendar (GC)), there were attempts by the government to curb the activities of the Bolsheviks to prevent a coup. Orders were issued for the arrest of leading party members, and their newspaper, Pravda (The Truth), was closed down. Lenin, keeping a low profile in his apartment, urged action. “We must not wait! We may lose everything! The government is tottering. To delay action is the same as death,” he wrote.

On October 25 (November 7, GC), the government tried without success to find armed support. The Petrograd Soviet of Workers and Soldiers party, of which the Bolsheviks were a faction, could rely on the support of troops in Petrograd (later St. Petersburg). The Bolshevik paramilitary Red Guards occupied the main telegraph office, post office, and power stations. Only the Winter Palace, the seat of the government, remained. The small unit of military cadets guarding it willingly surrendered to the revolutionary soldiers. The regime was overthrown, and power had passed to Lenin and his Bolsheviks.

**Laying the groundwork**
The October Revolution was the culmination of the civil unrest that had rumbled on for months. On February 23, 1917 (March 8, GC), in Petrograd, a riot had started, led by women frustrated at waiting hours for bread. They marched through the city, gathering support as they went. This grew into a general strike, and the demonstrations took on a more political nature. Red flags began to appear, and statues of »

- Dissatisfaction persists among the people.
- Russia suffers defeats in World War I.
- Economic hardship leads to food riots.

In February 1917, the monarchy is overthrown and replaced by the Provisional Government. The Tsar abdicates in March.

**Lenin and the Bolsheviks demand total power for the proletariat, launching the October Revolution.**

---

**Vladimir Ilyich Lenin**
Born Vladimir Ilyich Ulyanov on April 10, 1870 (22 April, NS), the founder of the Bolsheviks and first leader of Soviet Russia was a bold theorist and tireless organizer. Lenin became an active Marxist revolutionary after his brother Alexander was executed in 1887 for conspiring to assassinate Tsar Alexander III, an event that caused Lenin to lose faith in God and religion. In 1895 he was arrested and exiled for three years to Siberia.

Lenin’s chief aim was to organize the opposition to the Tsar into a single coherent movement. Following the Russian Revolution of March 1917, he returned to Russia believing his moment had come. In October, Lenin led the Bolsheviks against the government then, suppressing all opposition, became dictator of the world’s first communist state.

Lenin’s main challenge was civil war (1918–20). The Communists won, but Russia was brought to its knees. The strain of leadership also broke his health. After two strokes, one of which deprived him of speech, he died on January 21, 1924.
Tsar Nicholas II were toppled. Soldiers refused to obey orders to fire on the crowd, but police shot and killed 50 people.

**Rise of revolutionary parties**
With violence erupting on city streets, the Tsar abdicated in March, having relinquished power to the Provisional Government in February, with Prince Georgi Y. Lvov as its head. The government still represented only the middle classes and continued to back Russia’s involvement in World War I. Groups such as the Petrograd Soviet of Workers and Soldiers, a council made up of workers and peasants agitating for change, grew stronger and gained power within the Provisional Government. Lenin, in exile for revolutionary activities, was anxious to return to Petrograd and convinced that the collapse of world capitalism was imminent. He received the help of the German government, which hoped that he could further destabilize the political situation in Russia for their war effort, and arrived secretly in a sealed train. Full of revolutionary zeal, he was determined to shape a new Russian government according to his ideas, and he accused his associates of not doing enough to overthrow the current regime.

Prime Minister Lvov resigned after the disastrous July Offensive on the Western Front. His successor, Alexander Kerensky, formed a new socialist government with the Petrograd Soviet, but he, too, insisted on keeping Russia in the war. After mass demonstrations in Petrograd encouraged by the Bolsheviks, Kerensky banned them and arrested many of their leaders. Lenin fled to Finland.

**Revolution is nigh**
In August, Kerensky faced a new threat. General Lavr Kornilov, Russia’s army commander-in-chief, ordered troops into Petrograd. Kerensky believed that Kornilov was plotting to seize power. In desperation, he released the Bolsheviks, who armed those who wanted to prevent a counter-revolution. This was a massive boost for their cause. They were able to represent themselves to the people as defenders of Petrograd. By September the Bolsheviks had taken control of the Petrograd Soviet. Lenin seized the moment, returned to Russia, and renewed calls for revolution. He handed responsibility for military tactics to Leon Trotsky, a fellow Marxist. Peasants and farmers were revolting in rural areas, workers in the cities. Lenin decided the time was ripe for a Bolshevik seizure of power. The Bolsheviks took government buildings and the Winter Palace, where Kerensky’s cabinet had sought refuge.

On the night of October 25 (November 7, GC), Lenin issued a brief address to the Russian people: “The Provisional Government has been overthrown. Long live the workers, soldiers, and peasant revolution!” After this initial triumph, Lenin was compelled to hold democratic elections, but the Bolsheviks received only a quarter of the vote. Lenin dissolved the elected government and sent armed guards to prevent it meeting again. In February 1918, he signed a peace treaty with Germany, but the terms were extremely harsh. Russia ceded the Baltic States to Germany, while Ukraine, Finland, and Estonia were transformed into independent states. Russia was also forced to pay six billion German marks in reparations. This move freed the Bolsheviks from the German threat, but the terms of the treaty were deeply unpopular. Many regarded it as a betrayal of their country.

**Civil war**
The Bolsheviks had gained power, but now they had to keep it. Lenin established a highly centralized government system, banned all

---

This painting of the storming of the Winter Palace portrays the dramatic moment in the October Revolution when the Bolsheviks seized the government building.
opposition, and started the Red Terror, a campaign of intimidation, executions, and arrests against anybody perceived to be a threat to the Bolsheviks.

The Bolsheviks were a minority in Russia, and their opponents marshalled their forces against them, primarily the Whites, made up of former tsarists, army officers, and democrats. The Bolsheviks were known as the Reds.

As various factions fought over the future of the country, a civil war characterized by extreme violence erupted in Russia and ran from 1918 to 1921. The Whites received help from Russia’s former allies—Britain, France, the US, and Japan—which feared the spread of communism. At first, they made significant gains. However, they were badly coordinated, and Trotsky proved to be a brilliant military tactician.

In 1920, Lenin ordered a war against Poland to liberate the workers of eastern and central Europe, but at the Battle of Warsaw, after a magnificent counterattack, the Red Army was driven back.

**A country in ruins**

By 1921, the Whites had been defeated, and Lenin could finally turn his attention to rebuilding the Russian economy.

He faced a country on the verge of collapse. In the countryside, around 6 million peasants had died of starvation, and there was rioting in the cities. The Kronstadt naval rebellion in March 1921 further undermined the regime. Kronstadt was a naval town on an island off the coast of Petrograd. In 1921, 16,000 soldiers and workers signed a petition calling for “Soviets without Bolsheviks”: freely elected Soviets and freedoms of speech and press. The Reds reacted ruthlessly, executing several hundred ringleaders and expelling over 15,000 sailors from the fleet.

In May 1922, Lenin suffered a stroke. In December, the Soviet government declared the establishment of the Union of Soviet Socialist Republics (USSR), a federal union consisting of Soviet Russia and neighboring areas that were ruled by branches of the communist movement. From its inception, the USSR was based on a premise of one-party rule, prohibiting all other political organizations.

Lenin was disheartened by political infighting and worried about how the USSR would be run after his death. In late 1922 and early 1923, he dictated what became known as his “testament,” in which he expressed regret at the direction the Soviet government had taken. He was especially critical of Joseph Stalin, then general secretary of the Communist Party. Stalin’s aggressive behavior had brought him into conflict with Lenin.

Lenin died in 1924, but his legacy lives on. The Bolshevik Party’s establishment of the world’s first socialist state in the largest nation affected every country in the world. The victorious socialist revolution inspired workers with an alternative to capitalism and old imperialist regimes.
After four years of global conflict, 16 million people had died and centuries-old empires and dynasties had collapsed. In January 1919, the victors of World War I met to discuss the terms of peace. US President Woodrow Wilson had devised a plan that he believed would bring a new order to Europe based on democracy. Wilson pushed for a League of Nations to act as arbiter and peacemaker in national disputes.

Britain and France wanted to ensure that Germany would never again be able to threaten European peace. The German Army was to be reduced and the Rhineland demilitarized. Germany was also asked to give up lands to France on its west and to Poland on its east and north. In addition, the Austro-Hungarian empires were to be split into new nations such as Czechoslovakia and Yugoslavia; and the Ottoman Empire was also to be carved up, to the advantage of the British and French.

Crucially, in a “war-guilt clause,” the Germans had to admit to starting the war and also pay £6.6 billion in reparations. They signed the Treaty of Versailles on June 28, 1919 but stalled in paying compensation, so in 1923 France occupied Germany’s industrial Ruhr Valley. However, in the interwar years, neither of those nations did anything to deter aggression by Nazi Germany. When Adolf Hitler took France in 1940, he ordered the master copy of the treaty to be burned.

You have asked for peace. We are ready to give you peace.

Georges Clemenceau
Prime Minister of France

After the October Revolution in 1917, Russian leader Vladimir Lenin created a single-party state and appointed Joseph Stalin as general secretary. Stalin then used his position to launch his bid for supreme leadership, becoming dictator in 1929, five years after Lenin’s death.

Stalin pushed the country into a period of rapid industrialization. He confiscated land belonging to rural farmers to turn it into large farms to be run collectively to make food for the new workforce. In 1931–32, he requisitioned grain from the peasants, which led to a severe famine in Ukraine, killing millions.

The People’s Commissariat for Internal Affairs (secret police) was tasked with hunting out Stalin’s political opponents. Thousands of Soviet citizens died in the 1930s’ “blood purges,” known as the Great Terror, and millions of non-Russians were deported to labor camps. Despite this, Stalin portrayed his country as a land of peace and progress, and himself as a man working for the benefit of the people.

The dictator looked for chances to expand communism beyond Soviet frontiers, and after World War II, it spread to Poland, Hungary, Czechoslovakia, East Germany, and others, becoming known as the Eastern Soviet Bloc. Communist parties came to rule in North Korea in 1948, China in 1949, Cuba in 1959, and Vietnam in 1975.

Stalin had risen to become one of the most powerful men in the world. Soon after his death in 1953, his nation was a superpower to challenge the United States.

A ANY LACK OF CONFIDENCE IN THE ECONOMIC FUTURE OF THE UNITED STATES IS FOOLISH

THE WALL STREET CRASH (1929)

IN CONTEXT

FOCUS

The Great Depression

BEFORE

1918 The global economy struggles to recover its stability after the disruption of World War I.

1922 The US economy starts to grow rapidly as factories mass produce goods.

1923 Prices in Germany spiral out of control in hyperinflation that destroys people’s savings.

AFTER

1930 Mass unemployment hits the US, Britain, Germany, and other countries.

1939 The advent of World War II sees an increase in employment and government spending, speeding recovery.

1944 World leaders agree to set up the International Monetary Fund (IMF) and World Bank to finance economic development.

O

ver six desperate days in October 1929, shares on the New York Stock Exchange crashed. The downturn began on October 23rd, when stocks from car manufacturer General Motors were sold at a loss and the market started to collapse. Panic set in, and the next day the market nose-dived.

On Tuesday October 29, which became known as Black Tuesday, stock prices plunged even lower. In total, $25 billion, approximately $319 billion in today’s market, was lost. It was the biggest financial catastrophe ever, and it plunged the world into the Great Depression.

Roaring Twenties

The US had recovered quickly after World War I, and factories that had made supplies for the war effort switched to producing consumer goods such as cars and radios. The growth of new technologies and mass production saw economic output increase by 50 percent; the age of prosperity and consumerism that resulted became known as the Roaring Twenties.

Newspapers and magazines were filled with stories of people becoming rich overnight by dabbling in the stock market, and thousands of ordinary Americans bought shares, increasing the demand for them and inflating their value. Between 1920 and 1929, the number of shareowners rose from 4 million to 20 million.

By late 1929, there were signs of trouble within the American economy: unemployment was on the rise, steel production was declining, construction was slowing, and car sales had dipped. Still confident they could make a fortune, some people continued to invest on the stock market.

Speculators crowd around the front entrance of the New York Stock Exchange, deeply concerned about their financial investments in the days following the Wall Street Crash.
However, when the stock prices began to drop in October 1929, panic set in. The ensuing crash triggered a worldwide recession known as the Great Depression.

The Great Depression
In the US, factories were closed and workers sacked. In the spring of 1933, the agricultural sector was on the verge of disaster: 25 percent of farmers were without work, and many even lost their farms. Unemployment went from 1.5 million in 1929 to 12.8 million, or 24.75 percent of the workforce, by 1933, a pattern seen around the world.

Unemployment in Britain rose to 2.5 million, 25 percent of the workforce, with heavy industry, such as shipbuilding, particularly badly hit. Germany suffered greatly, since its post-war economy was supported by huge American loans which it was unable to pay back.

A New Deal
The crash helped bring Democrat Franklin D. Roosevelt into the White House in 1932. His policy, the New Deal, introduced a program of social welfare for the poor and government expenditure on huge public projects that created new jobs.

The Great Depression marked the end of the United States’ post-war boom. In Europe many turned to right-wing parties, such as Adolf Hitler’s National Socialist Party in Germany, with its promise to restore the economy. In many countries, recovery came only with the increase in employment brought about by World War II.
THE TRUTH IS THAT MEN ARE TIRED OF LIBERTY

THE REICHSTAG FIRE (1933)

When fire broke out at the Reichstag, the German parliament building, just after 9pm on February 27, 1933, Chancellor Adolf Hitler claimed it was a communist plot to bring down the government—a cynical ploy that gave Hitler an excuse to decimate his communist rivals.

The timing was perfect: elections were due to take place in March 1933. While Hitler’s National Socialist, or “Nazi,” Party was the largest party in parliament, he lacked a working majority because the two next-largest parties (the Social Democrats and Communists) were both on the left, and he feared...
The Reichstag Fire is said to have burned so fiercely that flames could be seen for miles around. Hitler blamed the communists in an attempt to build support for his Nazi Party. They used paramilitary groups to intimidate opponents, and spread propaganda to gain popularity. In Italy, Benito Mussolini was seen as the only man able to restore order. Once appointed prime minister in 1922, Mussolini gradually assumed dictatorial powers, becoming Il Duce, the leader. By 1928, Italy was a totalitarian state.

In Germany, Hitler worked ceaselessly to transform the Nazis into a major political force. Relying on a mix of nationalist rhetoric, anti-communism, vicious anti-Semitism, and an unceasing call to reverse the peace terms made at Versailles in 1919, Hitler rode a wave of popularity. In 1933 he became Chancellor, then, shortly after, dictator, calling himself Führer.

Fascists united
In 1936 Hitler and Mussolini began to send military support to aid General Franco in the Spanish Civil War, which pitted right-wing nationalists against left-wing republicans. Franco’s victory against the left-wing Popular Front government emboldened the dictators and emphasized the weakness of Western democracies.

The Reichstag Fire was a key moment in Nazi history. It led to the absolute dictatorship of Adolf Hitler and the growth of fascism, setting Europe on the path to world war.■

Dictators seize power
Fascism emerged across Europe in the 1920s and 30s. As governments struggled with post-war economic hardship and the fear of communist revolutions, extreme right-wing movements—fascism in Italy and Nazism in Germany—were set up as defenders against communism.

Fascism across Europe
European fascism blossomed in a climate of economic disarray in the 1920s and 30s. Democracies lost legitimacy with their people, and fascist parties, offering a form of extreme right-wing nationalism, boasted that they would provide strength where weakness had prevailed.

In the 1930s, no European country, with the exception of the Soviet Union, was without a form of fascist party. Britain had Sir Oswald Mosley’s British Union of Fascists (BUF). Ireland had the Blueshirts; France, Le Paisceau; and Denmark and Norway had many far-right parties. Engelbert Dollfuss’s Fatherland Front was installed in Austria in 1934, while Greece was under the rule of General Ioannis Metaxas between 1936 and 1941. Portugal and Bulgaria also came under right-wing dictatorships, as did Romania.

By the end of the 1930s, authoritarian governments had assumed power in virtually every corner of central and Eastern Europe, and democracy was in decline.
IN STARTING AND WAGING A WAR, IT IS NOT RIGHT THAT MATTERS BUT VICTORY.

NAZI INVASION OF POLAND (1939–1945)
In August 1939, Nazi Germany and the Soviet Union signed a non-aggression pact, also secretly agreeing to invade and then divide Poland between them. Russian leader Joseph Stalin had decided that in the event of war, Germany offered the best hope of Soviet security. One week later, on September 1, 1939, more than a million German troops invaded Poland from the west. Soon after, on September 17, Russian troops attacked Poland from the east. The context for this unprovoked assault, as declared by the German Führer, Adolf Hitler, was the pursuit of Lebensraum, “living space” deemed necessary for the expansion of the German people, whom Hitler saw as a superior “Aryan master race,” with the right to displace inferior races.

The invasion lasted just over a month. Trapped between two huge, well-armed powers, the Polish air force and army fought valiantly, but they lacked modern aircrafts and tanks. The German Luftwaffe was quickly able to gain command of the skies. In the end, Poland’s aviators and soldiers, fighting on two fronts, were overwhelmed.

The invasion ended in a resounding victory, and it added to Hitler’s increasing belief that he was a military genius. Some areas in western Poland were absorbed into Germany, while territory east of the River Bug was annexed by the Soviet Union.

The Nazi regime in Poland
The Nazis imposed a brutal regime on the German part of Poland.
Hitler was bent on the elimination of anyone who stood in the way of German domination.

As part of Hitler’s plan for ethnic cleansing, around 5 million Polish Jews were rounded up and herded into ghettos. The invasion of Poland gave some forewarning of the violence that would soon be visited upon scores of countries and countless people around the globe.

The rise of the Nazi Party
Although World War II was triggered by Hitler’s invasion of Poland, its origins can be traced back to Germany’s defeat in World War I and the demand for reparation payments. The defeated nations lost land and prestige,
Adolf Hitler watches a victory parade in Warsaw following the invasion of Poland. He and Soviet leader Joseph Stalin agreed to the invasion and division of the country.

Fascism in Europe

Italy’s Fascist dictator Benito Mussolini also had aspirations for foreign glory. In October 1935, he invaded Abyssinia (Ethiopia) in retaliation for the defeat the Italians had suffered there in 1896. By May 1936, Mussolini had conquered the country, facing no opposition from the Western powers.

Further evidence of Western democracies’ weakness in facing up to the Fascist challenge was provided the same year, when both Mussolini and Hitler sent “volunteers” to fight in the Spanish Civil War, to aid nationalist General Franco in his campaign against left-wing supporters of the Spanish Republic. Britain and France took no action, and Franco’s victory in 1939 bolstered the Fascist cause.

Hitler’s Lebensraum

Under this creed, Hitler embarked on an ambitious foreign policy. In 1935, openly going against the terms of the Versailles Treaty, he began a massive program of re-armament. In 1936 he occupied the demilitarized Rhineland, but none of the major powers intervened. In March 1938, Hitler annexed Austria to Germany, before setting his sights on the German-speaking part of Czechoslovakia, the Sudetenland. British and French politicians wanted to avoid a repeat of the horrors of World War I and felt that the Sudetenland was not worth fighting for. In the Munich Agreement of September 29, 1938, the Sudetenland was handed to Hitler in exchange for his promise to end his land-grabs. British prime minister Neville Chamberlain declared that he had secured “peace for our time,” only for the Nazis to invade the remainder of Czechoslovakia in March 1939.

German troops crossed the Polish frontier this morning at dawn and are since reported to be bombing open towns. In these circumstances there is only one course open to us.

Neville Chamberlain
The West intervenes
Hitler’s invasion of Poland, which began on September 1, 1939, finally forced Britain and France into a war they had been trying desperately to avoid. Deciding that they needed to take a tougher stance against Hitler after his takeover of Czechoslovakia, the two nations had guaranteed Poland support in the event of German aggression. Honoring this promise, they declared war on Germany on September 3, which meant British and French colonies were also drawn into conflict: Britain’s dominions Australia and New Zealand declared war immediately, the Union of South Africa followed on September 6, and Canada on September 10.

Germany quickly overran Poland with its tactic of blitzkrieg (“lightning war”), which utilized tank divisions supported by the Luftwaffe, the German air force. The British sent an Expeditionary Force (BEF) to France, but neither Britain nor France attempted an offensive against Germany. They were not ready for a large-scale attack, and some politicians still believed that peace terms could be negotiated.

This period became known as the “Phoney War.” Expecting to be bombed, Britain began to evacuate its children from major cities. Air-raid shelters were built, and gas masks handed out. The Phoney War ended in April 1940, when Germany attacked and conquered Denmark and Norway. A month later, they turned on France, Belgium, and the Netherlands. The French army was poorly led and badly equipped. France had relied on the Maginot Line, a chain of fortresses along the frontier with Germany, to halt any attack. But the fortification did not extend along the Franco-Belgian border, and the Germans simply bypassed it at the north end. Within the space of six weeks, France had fallen to the German onslaught.

The Battle of Britain
Only a hesitation by Hitler, who may have wanted to rest his troops and spare them from a possible counterattack, prevented the destruction of British forces before they could be evacuated by sea from Dunkirk. Thousands of Allied soldiers were transferred across the Channel in all kinds of vessels in Operation Dynamo. Winston Churchill, the First Lord of the Admiralty and later Britain’s wartime prime minister, told the British parliament, “The Battle of France is over. I expect the Battle of Britain is about to begin.”

However, Hitler’s attempts to invade Britain in Operation Sea Lion had to be abandoned after the Luftwaffe failed to win the battle of the skies. With the Luftwaffe triumphant in both Poland and France, the Germans had hoped that Britain could be beaten by air power alone. However, German crews were exhausted, intelligence was poor, and Britain’s use of radar enabled the Royal Air Force (RAF) to track incoming planes and take off in time to meet an attack. The Battle of Britain in the summer of 1940
was the first real check on Hitler’s progress, but Britain alone could not fight a power that now had control of almost the entire continent.

**The world at war**
What started as a European war gradually became a world war. In June 1940, Italy, emboldened by German successes, declared war on Britain and France, fulfilling the terms of the Axis agreement made between Hitler and Mussolini on May 22, 1939. But Italy’s failures in Greece and North Africa forced Hitler to send German armies into these areas, as well as Yugoslavia.

On September 7, 1940 Germany began its first major air raid on London. The Blitz, as the bombing of the English capital became known, thrust civilians into the war and put relentless pressure on industry, ports, and British morale. With men joining the army, women were required to work in factories and on farms. Food rationing was introduced in Britain in January 1940, and people were urged to grow their own food. Nazi-occupied Europe also experienced food shortages, which weighed most heavily on the conquered populations.

**Collaboration or exile**
In some locations, the Germans worked with existing governments and fully supported puppet administrations, such as the pro-Nazi Vidkun Quisling in Norway and the Vichy regime in southern France. Led by Marshal Philippe Pétain, Vichy was officially neutral, but it collaborated closely with Germany, fighting the French resistance, and implementing anti-Semitic legislation.

Germany had total control in Poland and eventual control of the Baltic states. Monarchs and politicians of more than a dozen occupied countries escaped to Britain. Polish ministers set up headquarters in London, and Belgium’s government operations were transferred there. The Dutch royal family, under Queen Wilhelmina, also sought refuge in London. When France fell to Germany, Charles de Gaulle, who opposed the newly installed Vichy government, became the voice of French opposition to the Nazi occupation.

In 1940 the biggest threat facing Britain was from German U-boats. As an island, Britain was dependent on its merchant ships to bring in vital supplies but also to export equipment to its fighting forces abroad, and German U-boats were sinking dozens of Allied ships each month. Merchant ships traveled in convoy to increase the chances of supplies getting through on each journey, but casualties were high.

**Fighting the USSR**
In June 1941, Britain gained a new ally when Germany invaded the USSR in Operation Barbarossa. Hitler had looked to the Soviet Union for new territory for the German people. It would also remove any future threat from the east but »
NAZI INVASION OF POLAND

fundamentally followed through on Hitler’s plan to destroy communism. At first it looked as if Germany and its allies would be as successful against the Russians as it had been against the French. By winter, Germany had advanced to within 1 mile (1.5km) of Moscow, and Leningrad, the USSR’s second city, was under siege.

Another powerful rationale for war in the east was one based on racist ideology and Hitler’s hatred of Slavs and Jews. As German troops swept into Russia, they inflicted a terrible campaign of genocide against communists and Jews. Russian troops endured extreme hardships. German tanks plowed through the Red Army defenses. Prisoners of war were shot or left to starve. Fleeing civilians were butchered without a moment’s hesitation. The harshness of the Russian winter slowed the Germans, and Russian counterattacks drove back their front line by several hundred miles. In the Battle of Moscow, from early October 1941 to January 1942, an estimated 650,000 soldiers from the Soviet Army lost their lives. In the spring of 1942, the Germans resumed their offensive in the USSR, driving the Red Army back and coming close to taking the Russian oilfields.

The Pacific and Africa

In December 1941, Japan entered the war by attacking the US fleet at Pearl Harbor, in the Hawaiian Islands, as part of its plan to drive American forces out of the Pacific. Germany—which had a tripartite agreement with Japan and Italy to provide mutual military assistance in the event any one of them was attacked by a nation not already involved in the war—immediately declared war on the United States. Britain now had two strong allies, the USSR under Joseph Stalin, and the US, led by President Franklin D. Roosevelt. Both were decisive in bringing about the defeat of the Axis powers. American industry became a triumph of wartime production, giving Americans in combat in Europe and Asia the tools they needed to fight the Axis. Japan won quick victories in the Pacific. It successfully captured the Philippines, Malaya, Burma, Indonesia, and Singapore, Britain’s main naval base in East Asia.

In North Africa, meanwhile, a renewed Axis offensive led by General Erwin Rommel brought the German and Italian armies within striking distance of Cairo and the Suez Canal. The first major Allied victory came in Egypt. In July 1942, Rommel was halted at El Alamein; in October, he was forced into retreat by the British 8th Army, led by Field Marshal Montgomery.

That same winter, the Red Army defeated the Nazis at Stalingrad. The Soviets encircled the Germans, forcing a surrender in February 1943.

Operation Barbarossa, launched in June 1941, saw the invasion of the Soviet Union by Germany, in breach of the non-aggression pact the two countries had signed two years earlier.

Roosevelt. Both were decisive in bringing about the defeat of the Axis powers. American industry became a triumph of wartime production, giving Americans in combat in Europe and Asia the tools they needed to fight the Axis.

History knows no greater display of courage than that shown by the people of the Soviet Union.

Henry L. Stimson
US Secretary of War
The turn of the tide
In a conference at Tehran in November 1943, the Allied leaders agreed on a strategy to liberate Europe. While the Russians drove the Germans back in the east, and the British and Americans advanced slowly through Italy, a huge Allied invasion force arrived in Normandy in June 1944. Eleven months later, it had reached the river Elbe in northern Germany, while Russian troops were advancing block by block through Berlin. Germany was being hit repeatedly by British Lancaster bomber aircraft from Bomber Command and the US Eighth Air Force. Staring at defeat, Hitler committed suicide on April 30, and Germany surrendered unconditionally a week later.

The last act of the war came in August 1945, when the US, after fighting island by island through the Pacific, put an end to Japanese resistance by dropping atomic bombs on Hiroshima and Nagasaki. The effects of the bombs were cataclysmic, inflicting unprecedented horror on the two Japanese cities.

Nations united
Hitler’s invasion of Poland marked the start of World War II, the largest and most destructive war in history, by the end of which an estimated 60 million people had been killed. Like their predecessors in 1918, the Allies were determined that this should be the last war of its kind.

Representatives of 50 nations met in 1945 to set up the United Nations. There was hope that this would mark the start of a new era of international understanding.

The Battle of Iwo Jima saw US troops fight against Japan’s Imperial Army for possession of the tiny island in the Pacific Ocean, resulting in 100,000 Japanese casualties.

Hiroshima and Nagasaki
American planes dropped atomic bombs on the Japanese cities of Hiroshima and Nagasaki to force Japan to surrender and end World War II. On August 6, 1945, “Little Boy” was dropped on Hiroshima. The inhabitants below had no idea what was about to happen. People, animals, and buildings were incinerated in the searing heat. Some 70,000 died immediately. Despite this terrible event, Japan did not surrender.

Japan had cause to reconsider its position when the Soviets entered the war against them by crossing into Manchuria on August 9. When, that same afternoon, the US dropped “Fat Man” on Nagasaki, instantly killing 50,000, Japan was brought to its knees and agreed to the Allies’ terms of surrender. These unprecedented attacks avoided a bloody ground assault by the Allies on the Japanese mainland, but many thousands lost their lives as a result of the long-term effects of radiation sickness.
On January 20, 1942, 15 members of the Nazi Party and German officials met in the Berlin suburb of Wannsee to discuss the implementation of the “Final Solution of the Jewish Question”—the code name for the systematic annihilation of European Jews. During the conference, a tabulation of all the Jews in Europe was presented, country by country, as well as a target number for extermination: 11 million. The meeting lasted two hours and was matter-of-fact and dispassionate. After approving the “Final Solution” and the slaughter of the Jews, the men called for brandy and cigars.
Auschwitz, in southern Poland, has become a byword for the Holocaust. Those prisoners subjected to forced labor were summarily executed when they became too weak to work.

The Wannsee Conference was far from the start of Nazi brutality against Jews. Adolf Hitler had come to power in 1933, spreading his belief that Germans were the Aryan master race, superior to all others, and that their blood should not be contaminated. He identified Jews as a race of people, not just a religious group. German Jews were banned from marrying non-Jewish Germans and subjected to increasing discrimination and segregation. From the time of the German takeover of Austria in 1938, Nazi brutality against Jews worsened. Jews wanting to flee German rule found other countries unwilling to accept them.

Gathering momentum
After Germany’s invasion of Poland in 1939, the Nazi campaign against the Jews reached a terrifying new level. Herded into ghettos, Polish Jews began to die in large numbers of starvation and ill-treatment.

When Germany invaded Russia in 1941, paramilitary death squads carried out mass killings of Jews in the conquered areas. To start with, victims were shot, up to 30,000 at a time, but the SS then began gassing Jews in the backs of vans. Poison gas was found to be a more efficient way to commit mass murder.

Until 1941, the Nazi leadership had envisaged solving the “Jewish problem” by deporting Jews to a distant location. By the time of the Wannsee Conference, however, they were committed to systematically killing Europe’s Jewish population. Six dedicated death camps were built in Poland. Adolf Eichmann of the Nazi paramilitary corps, the SS, arranged the transport of Jews to the camps from right across Europe, including France, Greece, Hungary, and Italy. The Jews from the Polish ghettos were also taken there to be exterminated. Prisoners arrived at these huge killing factories by train and were gassed in shower rooms, their corpses burned in large crematoria. At the Belzec camp, about half a million Jews were killed, and only seven prisoners are known to have survived. The death camp at Auschwitz, however, also had a labor camp attached, where those who were not killed on arrival were made to work. The Germans needed slave labor to support their war effort, and this offered Jews their best chance of survival. Along with other prisoners—including socialists, homosexuals, Roma, and prisoners of war—many Jews were sent to concentration camps. Their heads were shaved, and they were given a uniform to strip them of their identity. When the Allies liberated the camps in 1945, they found a vision of hell. The survivors were skeletal and traumatized.

State-sanctioned genocide
The Wannsee Protocol, the minutes of the conference, represents the unimaginable. For the first time, a modern state had committed itself to the murder of an entire people. As many as 6 million Jews lost their lives, and an estimated 5.5 million others—Slavs, homosexuals, communists—were also killed.

The Nuremberg Trials
After the end of World War II, the Allies sought to bring the Nazis to justice. An international tribunal was held at Nuremberg, Germany, beginning in 1945. Newsreels captured from the Nazis revealed the gas chambers, the massacre of civilians, and the ill-treatment of prisoners. The trials were televised, showing to the world—and, in particular the German people—evidence of the horrors that had taken place in the concentration camps.

Adolf Hitler, Heinrich Himmler, head of the SS, and Joseph Goebbels, head of propaganda, had committed suicide, leaving 24 defendants facing four counts: crimes against peace, planning and waging wars of aggression, war crimes, and crimes against humanity. Most said they were “only obeying orders.” Albert Speer, head of war production, was jailed for 20 years, while 12 of the other defendants were sentenced to death; the trials led to the setting up of a permanent international criminal court in The Hague, in the Netherlands.
ALL WE DID WAS FLY AND SLEEP

THE BERLIN AIRLIFT (1948)

At the Yalta and Potsdam conferences in 1945, the wartime Allies agreed to split defeated Germany into four zones, each separately administered by France, Britain, the USSR, and the US. The capital, Berlin, lay deep within Soviet-controlled East Germany. This, too, was split into four zones. On June 24, 1948, the Soviet Union imposed a blockade on West Berlin, cutting off all links by rail, road, and canal, to prevent vital supplies from reaching the population. In all, 2.5 million people faced a choice between starvation and accepting a communist regime.

A clash between East and West had the potential to lead to another world war, but the Western nations devised a plan to use airplanes to drop supplies into Berlin. Over the next 14 months, 278,288 relief missions were flown to the city. At the height of the airlift, a plane landed every three minutes.

The Cold War

The era of cooperation between the victors of World War II was short-lived; the Western countries clashed with the Soviet Union (USSR), over the type of governments being set up in Europe. The USSR banned non-communist parties in every Eastern European country and created a block of satellite states subservient to Soviet leadership. The Western powers sought to create democracies that excluded communists from power. Germany remained divided into communist East and democratic West, an emblem of polarized Europe. In 1946, former British prime minister Winston Churchill summed up the situation when he stated that “an iron curtain has descended across the continent.” This deep division between East and West became known as the Cold War, since it

AFTER
1961 The Soviets erect the Berlin Wall between East and West Berlin. It becomes an ugly symbol of the Cold War.
1985 Russian leader Mikhail Gorbachev campaigns for economic and political reforms: glasnost and perestroika.
1990 Germany is unified after the fall of the Berlin Wall.
After World War II, the communist East and democratic West disagree over the future of Germany.

The Western Allies plan to turn their occupied zones into a separate German state.

The Soviets cut road and rail links into West Berlin to force the capital into surrendering.

The West is determined to have a presence in Berlin but cannot risk another world war.

The Berlin Airlift is a peaceful solution.

never escalated into direct military conflict. The struggle over the future of Berlin became the first major crisis of the Cold War.

A plan to starve Berlin
In June 1948, the three Western Allies announced plans to merge their zones and introduce a new currency. Stalin’s response was swift: his blockade sought to starve Berlin into surrender and wrest power away from the West. The Western powers did not want to give the Soviets control of the Western sector and were determined to stay.

The Berlin Airlift was a success, and Stalin lifted the blockade in May 1949. Spurred by the Berlin crisis, Western European countries formed a defensive alliance—the North Atlantic Treaty Organization (NATO). The communist states of Eastern Europe organized a rival alliance in the Warsaw Pact in 1955.

The crisis over Berlin exacerbated the animosity between the US and the USSR. After World War II, Korea had also been split—into a Soviet-occupied northern zone and an American-occupied southern one. The north, backed by the USSR, invaded the south in June 1950. The US provided troops for a United Nations army, which went to the support of the South Koreans. The Korean War ended in 1953, but it, the conflict over Berlin, and the Soviet testing of their first atomic bomb in 1949, created a climate of fear in the West over communist expansion.

Joseph Stalin
The dictator of the USSR from 1927 until his death, Joseph Stalin (1878–1953) was notorious for his ruthless repression of dissent. His rise to power began in 1903, when he became a friend of Vladimir Lenin, the first leader of Soviet Russia. During and after the Russian Revolution (1917), he played a prominent part in the Communist Party’s rise to power, and in 1922 he advanced to become general secretary of the Russian Communist Party.

He became supreme leader in 1927 and aimed to transform the Soviet Union into a major industrial force. In 1928, he launched an industrialization program and introduced collective farming. Millions died of starvation, in labor camps, or in a wave of purges directed at his supposed opponents.

In the post-war years, Stalin led the Communist Party into a period of confrontation with his former World War II allies. Following his death, Stalin was condemned by his successors for his campaigns of terror and murder.

1960 The Declaration of Decolonization asserts the rights of all peoples to self-determination.

F or more than a century, India had been the crown jewel of the British Empire, but on the last stroke of midnight on August 14, 1947, it became an independent nation. In India’s Constituent Assembly, Delhi, a special midnight gathering of parliament was convened. Jawaharlal Nehru, the first prime minister of India, rose to his feet to declare India’s freedom. However, this independence also opened a social and geographic wound that has yet to heal.

The new Indian state was split into two independent nation states: Muslim-majority Pakistan and Hindu-majority India. Pakistan
Mohandas Gandhi

The Indian national leader known as Mahatma, meaning “great soul,” Mohandas Gandhi (1869–1948) led his country to independence from Great Britain. He came from a Hindu family and studied law in England before spending 20 years in South Africa trying to secure rights for the Indians living there. Gandhi’s involvement in Indian politics began in 1919, and he soon became the unquestioned leader of the independence movement. He preached the doctrine of Satyagraha (soul force, or passive resistance) which he applied against the British with great effect. He adopted a simple life believing in the virtue of small communities and campaigned against Indian industrialization. Gandhi’s life work was crowned in 1947, when India finally won independence, but the concessions he had made to the Muslims led to his assassination the following year by a Hindu fanatic, who blamed him for the partition of India, although Gandhi himself bitterly opposed the dismemberment of the subcontinent.
parliament where power was shared between Indians and British officials. This did not satisfy Indian nationalists, and the British responded to their protests with sometimes brutal repression.

The push for independence from the 1920s to the 1940s was galvanized by the work of Mohandas Karamchand Gandhi. Gandhi not only launched the Satyagraha campaign, promoting non-violent protest, but also became an influential figure for millions of followers. In 1942 Gandhi led the “Quit India” campaign, calling for civil disobedience to disrupt Britain’s efforts in World War II. The British immediately jailed Gandhi and other nationalist leaders.

By the end of World War II, it was clear that Britain lacked the means to defeat the nationalist campaign. Britain’s officials in India were utterly exhausted, and Britain itself was almost bankrupt. Britain agreed to a fully independent India. While Gandhi and Nehru advocated Indian unity, the Muslim League, founded in 1906 to safeguard the rights of Muslims, demanded a completely separate Muslim state. Its leader, Mohammed Ali Jinnah, feared that Muslims could not protect their minority rights if left to live under Hindu rule. Congress rejected the proposal and violence on the streets between Hindus and Muslims began to escalate.

Pakistan is born
In 1947, Lord Louis Mountbatten flew into Delhi as Britain’s final Viceroy of India. Faced with irreconcilable differences over the demand for a separate state for India’s Muslims, he persuaded all parties to agree to partitioning the country into Hindu India and Muslim Pakistan.

From its birth, Pakistan faced many challenges. It had limited resources and a huge refugee problem. There were different traditions, cultures, and languages, and Jinnah, its first governor general, died the following year. In 1948, India and Pakistan fought over Kashmir, the only Muslim-majority area to remain within India.

“Ours is not a drive for power, but purely a non-violent fight for India’s independence.”
Mohandas Gandhi

Colonies gain freedom
After World War II, the European colonial powers—mainly Britain, France, the Netherlands, and Portugal—recognized that change was inevitable. Some colonies won independence by peaceful means, such as in Burma and Ceylon (1948), but often, European powers tried to hold on to their colonies.

During World War II, Japan, itself a significant imperial power, drove the European powers out of Asia. After the Japanese surrender in 1945, nationalist movements in the former Asian colonies campaigned for independence rather than a return to European colonial rule. Dr. Ahmed Sukarno, leader of Indonesia’s nationalist movement, declared the Independent Republic of Indonesia in 1945. The Dutch sent troops to restore their authority, and in two military campaigns that followed, an estimated 150,000 Indonesians and 5,000 Dutch soldiers died. International pressure eventually forced the Dutch to concede independence in 1949.

India’s independence was finally declared by Jawaharlal Nehru and Lord Louis Mountbatten at Delhi’s Constituent Assembly, just seconds into August 15, 1947.
The Japanese occupation of Malaya during the war had unified the Malayan people and greatly increased nationalistic feelings. Britain clamped down on protests, which led the militant wing of the Malaysian Communist Party to declare war on the British Empire in 1948. Britain responded by declaring a state of emergency and pursuing a bitter campaign against Chinese “communist terrorists.” Independence was not granted to Malaya until 1957.

Unrest in Africa
In Kenya, the imposition of a state of emergency in 1952, in response to the Mau Mau (rebel) uprising, led to greater insurgency and the British rounding up of tens of thousands of Mau Mau suspects into detention camps. By 1956 the rebellion had been crushed, but the methods used by the British to regain control brought international condemnation. In central Africa, too, decolonization was born in violence. In Rhodesia, savage conflict erupted between the black majority and the fiercely racist white leadership, which had unilaterally declared independence in 1965.

We are proud of this struggle, of tears, of fire, and of blood, to the depths of our being.

Patrice Lumumba
First prime minister of the Congo (Zaire) (1960)

The process of decolonization coincided with the new Cold War between the Soviet Union and the United States. The US became concerned that, as the European powers lost their colonies, Soviet-supported communist parties might achieve power in the new states. The US used substantial aid packages to encourage newly independent nations to adopt governments that aligned with the West. The Soviet Union deployed similar tactics in an effort to encourage new nations to join the communist bloc. Many resisted the pressure to be drawn into the Cold War and joined the “non-aligned movement.” This movement began out of a 1955 meeting in Bandung, Indonesia, involving 29 African and Asian countries. Member countries decided they would not be involved in alliances or defense pacts with the main world powers, but focus on internal development instead.

Terrorism in France
France was determined to maintain its political status in Algeria. When independence was not realized after World War II, war broke out between Algerian nationalists and French settlers. In 1958 the National Liberation Front (FLN), the main nationalist group, led several terrorist attacks, first in Algeria, then in Paris. The crisis led to the return to power of Charles de Gaulle, the wartime leader of the Free French. In 1960, de Gaulle, to the horror of the French settlers, agreed to emancipate Algeria. After a long and bloody conflict in which an estimated 150,000 died, Algeria gained its independence in 1962.

Independence gained
During the 1960s and 70s, many of the countries that were once held as British colonies became independent states and joined the Commonwealth. The British Commonwealth, formed in 1931, became the successor to Britain’s old empire, preserving Britain’s global economic and political influence. In 1931 Britain extended dominion status to the already self-governing colonies of Canada (1867), Australia (1901), New Zealand (1907), and Newfoundland (1907). Britain and her dominions shared equal status, and they accepted the British monarch as head of the Commonwealth. In 1949 the British Commonwealth became “The Commonwealth,” a free and equal association of independent states, but the end of the empire was drawing near. Britain fought a war to retain the Falkland Islands in 1982, and Hong Kong continued as a British dependency until 1997.

Gandhi had a profound influence on world politics. Other peaceful resisters—such as Martin Luther King Jr. and Tibet’s Dalai Lama—emulated his methods. Around the world, the struggle for countries to secede from nations they belong to continues, as the likes of Scotland (United Kingdom), Quebec (Canada), and Palestine fight to be seen as nations in their own right.
As the sun rose on May 14, 1948, the British flag was lowered at Government House, on Jerusalem’s Hill of Evil Counsel, ending the 26-year British mandate over Palestine. David Ben-Gurion, the longtime leader of the Jewish settlers, or Zionists, who had fled to Palestine from Europe, proclaimed the news of the establishment of the Jewish state in Palestine.

Israel’s Muslim neighbors, united as the Arab League, rejected the state’s creation and reacted with an attack. Troops moved in from Transjordan, Egypt, Lebanon, and Syria. Hardened to
The flag of Israel was adopted in 1948, a few months after the birth of the state. It was originally designed in 1891 for use by the Zionist movement and has the Star of David at its center.

Facing increasing attacks, the Jews formed local defense groups under the umbrella term the Haganah.

**Escalation of violence**

In 1939, the rise of anti-Semitism in Europe, particularly in Nazi Germany, forced Jews to flee to Jerusalem. Facing a much larger influx of settlers than they had anticipated, the British proposed a restriction on the free settlement of Jewish refugees in Palestine.

After World War II, violence in Palestine escalated, and in 1947 the British government said it would terminate its rule and hand the “Palestine problem” to the United Nations. The Holocaust convinced the UN that the Jewish people needed a homeland, so they resolved to partition Palestine into an area for Arabs (about 44 percent) and the rest for a Jewish state. The Jews agreed with the plan, but the Arabs refused it. Despite this, on May 14, 1948 the state of Israel was born.

Israel’s immediate priority was to build a credible defense force from the Haganah. After the Six Day War (1967), Israel controlled the Sinai, Gaza, the West Bank, the Golan Heights, and Jerusalem. It faced many attacks from Arab neighbors, in addition to threats from the paramilitary Palestine Liberation Army (PLO), formed in 1964.

Arab Palestinians repeatedly called for an independent state in the West Bank and Gaza. In the occupied zones, they suffered from poor living conditions, military raids, and restricted movement.

**David Ben-Gurion**

The founder and first prime minister (1948–63) of the state of Israel, David Ben-Gurion was born in 1886 to Zionist parents in Poland. In 1906, he immigrated to Palestine, where he became an active supporter of the struggle for an independent Jewish state. He led the Jewish campaign against the British in Palestine, authorizing acts of sabotage.

When he became the nation’s leader, he established the Israeli Defense Force and guided the modern development of Israel. He promoted the use of Hebrew as the language of the country.

His “Law of Return,” announced in 1950, granted permission for Jews from around the world to immigrate to Israel.

He briefly retired in 1953, and in his later years in power he initiated secret talks with Arab leaders in an attempt to gain peace for the Middle East.

In 1970, Ben-Gurion retired fully from the Knesset (Israeli parliament) and devoted himself to writing his memoirs in Sde-Boqer, a kibbutz (communal settlement) in the Negev Desert in southern Israel. He died in 1973 and is still a revered figure.

FOCUS

Founding Communist China

BEFORE

1911–12 The Republic of China is born under Nationalist Sun Yat-sen; the last Qing emperor abdicates.

1919 The May Fourth Movement, a student-led protest, spreads ideas of nationalism and communism.

1921 The Communist Party founded in Shanghai promotes revolution based on Marxism.

AFTER

1958 Mao Zedong introduces the Great Leap Forward, a five-year economic plan.

1978 Premier Deng Xiaoping announces a new economic program to make China a major financial power.

1989 Troops kill hundreds of pro-democracy supporters in Tiananmen Square.

THE LONG MARCH

IS A MANIFESTO, A PROPAGANDA FORCE, A SEEDING-MACHINE

THE LONG MARCH (1934–1935)

China is ruled by regional warlords, and there is no central government.

Communist and Nationalist parties unite against the warlords.

The Nationalists have the upper hand, and the Communists retreat.

Incompatible ideologies mean these two groups mostly fight each other.

The exertion and triumph of the Long March cements Mao’s leadership and becomes mythic.

The Communists regroup and survive to fight until the People’s Republic of China is born.

In the autumn of 1933, the Chinese Communist Party (CCP) was on the brink of annihilation. Nationalists had taken control of the country and launched a major attack against their base in Jiangxi, a southeastern province. In October 1934, the Communists were forced to abandon their stronghold and break through the Nationalist blockade. Some 80,000 set out on an extraordinary journey of 3,700 miles (6,000km) that lasted 368 days. It became known as the Long March.

Guided by their future leader Mao Zedong, the Communists faced bombs and machine-gun fire
from the air and were constantly under attack by Nationalist troops on the ground. They traveled mostly at night, the unit splitting into different columns to make them harder to spot.

The Tibetan mountains, Gobi Desert, and miles of wilderness stood between them and their goal: to reach the safety of northern China and establish a new Communist base. Hundreds died of starvation: of the original 80,000 marchers, only about 8,000 survived. Far from being viewed as a failure, however, their feat was hailed as a triumph of endurance and ensured the survival of the CCP.

**Unifying the nation**

In 1895, China had suffered a heavy military defeat against Japan. Anti-Japanese feeling swelled following Japan’s aggression against China during World War I. Huge protests erupted after the 1919 Treaty of Versailles handed former German colonies in China to Japan. In the wake of these protests, communist ideals gained support, and in 1921 the CCP was founded. The Kuomintang, a Nationalist party, also grew and by the mid-1920s had begun unifying the country.

**Massacre in Shanghai**

Nationalists joined forces with Communists in 1926 under Chiang Kai-shek (Jiang Jieshi) in the Northern Expedition to regain territories controlled by regional warlords. During the expedition, as the CCP increased in strength, a bitter rivalry led to an attack by Nationalists against the CCP in Shanghai, in April 1927. Hundreds of Communists were arrested and tortured. The massacre triggered years of anti-Communist violence, and the Communists retreated to the Jiangxi countryside.

**The struggle for survival**

After the Long March, the CCP regrouped in the north. Nationalists and Communists were forced into an uneasy alliance in 1937, when Japan invaded China. By 1939, large areas in the north and east had been conquered. After Japan’s defeat in World War II, tension between Nationalists and Communists flared up again, leading to civil war in 1946. The Communists won after massive battles with more than half a million troops on either side. On October 1, 1949, Mao Zedong created the People’s Republic of China.

The Long March was a feat of remarkable endurance. To the survivors, it provided a deep sense of mission and contributed to the perception of Mao as a leader of destiny and revolutionary struggle.

**Chiang Kai-shek**

The foremost non-communist Chinese leader of the 20th century, Chiang Kai-shek (1887–1975) was a soldier who, in 1925, became leader of the Kuomintang (Nationalist Party), which had been founded by Sun Yat-sen.

During his various stints as China’s premier, he ruled over a troubled country. He attempted modest reforms but was beset by intractable domestic strife, as well as by armed conflict with Japanese invaders.

Despite making attempts to crush his chief rivals, the Chinese Communists, when China was attacked by Japan his followers forced him to make an alliance with the Communists against the invading Japanese. The alliance did not survive the end of the World War II, and in 1949 Chiang and his party were driven from the mainland to the island of Formosa, which by that time had become known to Westerners as Taiwan. While he was there, Chiang set up a government in exile, which he controlled until his death in 1975. His government was recognized by many states as China’s legitimate government.
In February 1948, at a time when the Gold Coast, a British colony in West Africa, had been demanding independence for several years, a group of unarmed African ex-servicemen marched to the British governor with a petition of grievances. Ordered to stop, they refused, and the police opened fire.

In response to this, in 1949, nationalist Kwame Nkrumah formed the Convention People’s Party (CPP), an organization fighting for self-governance. Nkrumah initiated a campaign of positive action inspired by Gandhi’s philosophy of non-violent non-cooperation in India against
the British. The strikes and protests they encouraged remained peaceful but paralyzed the country, and Britain agreed to elections in early 1951. The CPP won 35 out of 38 seats, and the Gold Coast moved rapidly toward independence, which was proclaimed on March 6, 1957 with Nkrumah becoming prime minister of the nation of Ghana. It was a moment of huge hope for a new kind of Africa.

The European powers that ruled Africa had been impoverished by World War II, and attitudes to colonialism were changing. Nations that had fought against fascism found it hard to justify imperialism.

**A domino effect**
Events in Ghana had a significant impact in West Africa. In 1958, Guinea voted to secede from France. Determined not to be left behind, Nigeria celebrated independence from Britain on October 1, 1960. By 1964, independence had also been granted to Kenya, Northern Rhodesia (Zambia), Nyasaland (Malawi), and Uganda.

Many African countries gained independence during the Cold War. Used as pawns between the capitalist and communist superpowers, they accepted loans and military aid: in the 1970s, Ethiopia was rewarded with billions of dollars’ worth of Soviet military equipment. Civil wars were also numerous, such as the ethnic civil wars in Rwanda and Zaire, as well as the clashes between warlords over food supplies in Somalia.

**Dictatorial rulers**
Once independence was achieved, African nationalist leaders sought to consolidate power by banning political rivals. Coups and military governments predominated—such as that of Idi Amin in Uganda. By the early 1970s, only Zimbabwe and South Africa were still ruled by the white political elite. Corruption, however, existed in most African countries. Nkrumah wanted Ghana to be a beacon of success, but his Pan-Africanism failed, and Ghana’s fortunes began to slide as he became increasingly dictatorial.

---

**Kwame Nkrumah**

Ambitious and well-educated, Kwame Nkrumah had big plans for both Ghana and Africa as a whole. He went to college in the US and later traveled to England, where he became involved in the West African Students’ Union. In 1948, he began traveling around the Gold Coast as leader of a youth movement calling for “self-government now.”

Nkrumah’s calls for positive action civil disobedience as head of the Convention People’s Party led to his arrest, and he was sentenced to three years in jail. While in prison, he won the general election, and five years later, in 1957, he became prime minister of the newly independent Ghana.

Nkrumah’s popularity rose with the construction of new schools, roads, and health facilities, but by 1964 Ghana was a one-party state and Nkrumah its “life president.” After two assassination attempts and increasing human-rights abuses, Nkrumah faced a coup in 1966 and went into exile in Guinea. He died of cancer in 1972.
WE’RE EYEBALL TO EYEBALL, AND I THINK THE OTHER FELLOW JUST BLINKED
THE CUBAN MISSILE CRISIS (1962)

For 13 days, from October 15 to October 28, 1962, the world teetered on the edge of nuclear destruction. Soviet leader Nikita Khrushchev had deployed nuclear weapons in Cuba, and US president John F. Kennedy demanded he remove them. Each threatened nuclear war. This was no empty threat: from the 1950s, both superpowers had begun stockpiling vast nuclear arsenals. Strategists articulated the mutually assured destruction (MAD) doctrine, which held that if Russia attacked the West, the West would make sure that they retaliate. In short, there would be no winners.

IN CONTEXT
FOCUS
Nuclear arms race

BEFORE
1942–45 The US sets up the Manhattan Project to develop the first nuclear weapon.
1945 The US drops atomic bombs on the Japanese cities of Hiroshima and Nagasaki, ending World War II.
1952–53 Both the US and USSR develop the H-bomb, 1,000 times stronger than the atomic bomb.

AFTER
1963 The USA and Russia agree to a nuclear test-ban treaty, and tensions lessen.
1969–72 Strategic Arms Limitation Talks (SALT I) yields a superpower agreement on missile deployment.
1991 Strategic Arms Reductions Treaty I (START I) reduces the numbers of US and Soviet long-range missiles.
When Kennedy became president in 1961, he inherited a deteriorating relationship with Cuba. The US and Cuba had a history of mutual cooperation, but this had changed with the Cuban Revolution, when, on January 1, 1959, Fidel Castro overthrew the government of President General Fulgencio Batista.

**Trade embargo**
The US accepted Castro as ruler of Cuba, in spite of his communist leanings, and had a large economic presence in Cuba. However, Castro began to break the American hold on the economy, nationalizing all industry without compensation. In response, the US imposed a sweeping trade embargo, so Castro turned to the Soviet Union for support. Fearing communist expansion, the US tried to topple Cuba’s government with the failed Bay of Pigs invasion in April 1961, involving CIA-backed Cuban exiles.

Also in 1961, the US deployed 15 nuclear-tipped Jupiter missiles in Turkey, in readiness to strike against the USSR should the need arise. Turkey shared a border with the Soviet Union, so this was viewed as a direct threat to Soviet territory.

**An ultimatum**
Khrushchev came under pressure from Soviet hard-liners to take a tough stance. This, and the desire to defend his Cuban ally from American aggression, led him to install missiles in Cuba that were capable of carrying nuclear warheads. On October 14, 1962, photographs taken by a U-2 spy plane showed nuclear weapon sites being built by the Soviets. Kennedy’s military advisers sought an immediate attack on the missile sites, but Kennedy favored a naval blockade of Cuba to prevent the installation of more missiles. He issued an ultimatum to Khrushchev to withdraw and informed the world that nuclear war was an imminent possibility. Meanwhile, Khrushchev ordered the captains of Soviet ships to hold their course for Cuban ports.

**Breaking the deadlock**
Frantic diplomacy behind the scenes led to a deal that broke the deadlock: Kennedy agreed to remove missiles from Turkey in secret if Khrushchev dismantled all nuclear weapons in Cuba. The Soviet leader agreed—only if America would also abort its plan to invade Cuba.

On October 28, Khrushchev ordered his ships to turn around—a defining moment of the Cold War. The superpowers became more cautious, and the threat of nuclear war began to diminish.

### John Fitzgerald Kennedy
The 35th president of the US, John Fitzgerald Kennedy (1917–63) was the first Roman Catholic and, at 43, the youngest man ever to be elected to that office. As president, Kennedy brought a fresh and youthful style to politics, calling his program the “New Frontier.” This included a challenge to venture into outer space and to eliminate poverty. His administration quickly won popular support.

Kennedy’s years in power were marked in foreign affairs by Cold War tension. His greatest test was the Cuban Missile Crisis of 1962, where his firm stance against Russia brought him even greater popularity. His ambitious domestic reforms, however, on issues such as welfare and civil rights, were increasingly blocked by Congress.

While he was campaigning for the next presidential election, JFK was assassinated by Lee Harvey Oswald in Dallas, Texas, on November 22, 1963. Kennedy’s death was a shock and a tragedy for Americans, at a time when tensions were just starting to ease between the United States and Russia.
On October 4, 1957, the USSR launched the world’s first artificial satellite, Sputnik 1. Carrying a simple radio transmitter to relay information about conditions in space, the satellite remained in orbit until January 4, 1958, when it re-entered and burned up in Earth’s atmosphere.

Sputnik symbolized far more than a scientific breakthrough. It was a sensational coup for the Soviets during the Cold War with the West. No shots were fired, but the military and political ramifications were immense. Americans felt more vulnerable to a nuclear attack. The USSR was now a Superpower, stunning the US and initiating the “space race,” a frantic competition between nations for technological superiority.

The US catches up
Sputnik was a mass-media event that ushered in the “Space Age,” capturing the world’s collective imagination. There was a boom in science-fiction books, films, and TV dramas set in space. By 1958, the US had created NASA, the National Aeronautics and Space Administration, but they could only watch in envy as the Soviets sent Yuri Gagarin into orbit in 1961, the first human to go to outer space.

The US caught up by sending John Glenn into orbit in 1962, and by 1967 they had built a rocket, Saturn V, that was powerful enough to reach the moon. In 1969, 12 years after the launch of Sputnik 1, the American astronaut Neil Armstrong left Apollo 11 and became the first man to walk on the moon.

That’s one small step for [a] man, one giant leap for mankind.

Neil Armstrong

The March on Washington on August 28, 1963 brought roughly 250,000 people—mostly African-Americans—to the nation’s capital. They were calling for equality, an end to racial segregation, and for all Americans to have access to a good education, decent housing, and jobs that paid a living wage.

One of the speakers was the Reverend Dr. Martin Luther King, who had been arrested that April during anti-segregation protests in Alabama. “I have a dream,” King cried, starting his famous speech.

**Calls for equality**

The abolition of slavery after the American Civil War of 1861–65 led to emancipated slaves seeking American citizenship. However, while they were no longer slaves, they were not equal with whites, and they endured discrimination, segregation, and violent racist attacks. In the 1950s, a number of African-American groups fought back against discrimination with a policy of non-violence. In the 1960s, civil rights marches in Birmingham, Alabama, led by King were central to the campaign. Some extremists, especially in the South, reacted with gruesome acts of violence.

After the March on Washington, US Congress passed the Civil Rights Acts of 1964, outlawing discrimination, and the Voting Rights Act of 1965. More than half a century later, however, many of the goals set on that day are still out of reach to black Americans.

There are those who say to you, we are rushing this issue of civil rights. I say we are 172 years too late!

I AM NOT GOING TO LOSE VIETNAM
THE GULF OF TONKIN INCIDENT (1964)

IN CONTEXT
FOCUS
Intervention in Southeast Asia

BEFORE
1953 Cambodia wins its independence from France.
1963 President Ngo Dinh Diem of South Vietnam is killed in a US-backed military coup.

AFTER
1967 The Association of Southeast Asian Nations, ASEAN, is established to promote stability in the region.
1973 The Paris Peace Accords ends US combat in Vietnam, but does not end the conflict between North and South.
1976 The Socialist Republic of Vietnam is proclaimed, and Saigon is renamed Ho Chi Minh City. Many flee abroad.

Southeast Asian nations want independence from colonial rule.
The US fears communism is spreading across Southeast Asia.

After a war with France, Vietnam splits between a communist North and a US-backed South.
The US increases its military presence as a response to communist successes in the region.

Covert American activity culminates in a US warship being attacked in the Gulf of Tonkin.

US president Johnson uses the incident to justify military intervention in Vietnam, widening the frontiers of the Cold War.

In the aftermath of World War II, the states of Southeast Asia struggled to create stable political systems, and the region became embroiled in the Cold War between the United States and the Soviet Union. In few places were the battle lines as sharply drawn as in Vietnam. After French colonial rule came to an end in 1954, Vietnam was divided at the Geneva Conference into North Vietnam, with a communist government under Vietnamese communist revolutionary leader Ho Chi Minh, and the US-backed South Vietnam. In 1960, Ho Chi Minh, with support from communist
The US Navy destroyer Maddox was sailing off the coast of North Vietnam when it came under attack. This incident was the spark that led to the Vietnam War.

Superpowers Russia and China, set up the National Liberation Front (NLF) in South Vietnam, and started a guerrilla war to unite the country under communist rule.

Tensions steadily rose until 1964. In August of that year, the US Navy destroyer Maddox was operating off the coast of North Vietnam in the Gulf of Tonkin, monitoring radar and radio from northern coastal installations, to support attacks made by the South Vietnamese navy. North Vietnam, believing the Maddox was linked to raids on its coastal targets, launched a torpedo attack. Two days later, the Maddox reported once again coming under fire. This second attack has since been disputed, but US president Lyndon B. Johnson, recognizing that South Vietnam could not prevail on its own against a communist-led guerrilla movement that already controlled much of the country, used the skirmish to pass the Gulf of Tonkin Resolution in Congress. This allowed him to take any measures necessary to deal with threats to US forces in Southeast Asia.

**US intervention**
The US feared that if Vietnam became a communist regime, other countries in the region would soon follow. Using the Gulf of Tonkin Resolution, Johnson poured troops into the South and bombed North Vietnam by air. Huge numbers of civilians were killed, but despite their technological superiority, the Americans failed to crush the Viet Cong guerrillas. American troops suffered high casualties and gradually became demoralized.

**The specter of communism**
The Vietnam War was the first televised war in US history. As the public watched horrific events unfolding, an increasing number opposed the conflict. Around the world, peace movements organized large anti-war demonstrations.

The communists' Tet Offensive of 1968, a series of fierce attacks on more than 100 cities and towns in South Vietnam, crushed US hopes of an imminent end to the conflict, and peace talks were initiated in 1969. In March 1973, the last American troops withdrew from Vietnam, and in April 1975 South Vietnam fell to the North.

US policy-makers consistently misinterpreted Asian nationalist movements for Soviet-inspired communism. Ultimately, however, what the US feared never came to pass, and with the exception of Laos and Cambodia, the region remained out of communist control.

---

**Pol Pot's brutal regime**

During the Vietnam War, North Vietnam used Cambodia to channel soldiers and supplies to the South along the Ho Chi Minh Trail. In 1970, a joint US–South Vietnamese force invaded Cambodia to flush out the Viet Cong. The US also heavily bombed Cambodia. The military destabilization in Cambodia led to a surge of support for Pol Pot, the leader of the Kampuchean Communist Party, or Khmer Rouge, a guerrilla movement that seized power in 1975.

Pol Pot’s brutal regime intended to style the country into a classless agrarian society inspired by Mao Zedong’s Cultural Revolution in China. The entire population was marched to the countryside and forced to work as rice farmers. Over the next 44 months, around 2 million people—a quarter of Cambodia’s population—died, either killed or starved. The fields where people died became known as the “Killing Fields”. After three years of terror, Pol Pot was driven from power by a Vietnamese invasion.
A REVOLUTION IS NOT A BED OF ROSES
THE BAY OF PIGS INVASION (1961)

The United States is determined to keep communism from the Americas. President Kennedy inherits a CIA plan to get rid of Fidel Castro.

The Bay of Pigs invasion is a disaster, and Castro emerges triumphant.

The US steps up its support of anti-communist regimes in Latin America, while the USSR backs pro-communist revolutionaries.

The Cold War continues to dominate global geopolitics.

IN CONTEXT

FOCUS
Revolution and reaction in Latin America

BEFORE
1910 The Mexican Revolution is the first major social revolution of the 20th century.
1952 The National Revolutionary Movement (MNR) takes power in Bolivia.
1954 A military junta is installed in Guatemala in a coup organized by the CIA.

AFTER
September 11, 1973 Salvador Allende, president of Chile, dies during a coup led by army chief Augusto Pinochet.
1981 The US suspends aid to Nicaragua and supports fighters known as Contras, in an attempt to overthrow the left-wing Sandinistas.

On April 15, 1961, a force of Cuban exiles began an invasion of Cuba to try to topple Fidel Castro’s left-wing regime and replace it with one more open to American interests. Eight American B-26 bombers flew from Nicaragua to destroy Castro’s air force on the ground. The air raid seemed successful, but at least six of Castro’s fighter planes survived. The next day, Castro’s air force sank two ships loaded with vital supplies. In the early hours of April 17, a group of around 1,400 Cuban exiles, codenamed Brigade 2506, launched an amphibious assault on the coast of southern Cuba, the Bay of Pigs. They were driven back by Castro’s forces and ran out of ammunition. It only took three days to thwart the exiles’ invasion.
The Bay of Pigs invasion was a disaster for the United States, and many anti-Castro forces were captured during the conflict.

CASTRO MUST GO
After World War II, Latin America became a proxy battleground for two competing ideological systems: capitalism and communism. The US was determined to eradicate communism and supported right-wing dictators with anti-reformist regimes in countries such as Cuba, Honduras, and Guatemala.

During the 1950s, corruption and brutality within the Cuban Batista government forced a slow withdrawal of US support. When Castro defeated Batista in 1959, the US government had misgivings over Castro’s communist leanings. By 1960, Castro had nationalized all US interests in Cuba without compensation and had broken diplomatic ties. To protect their economic assets and defeat communism, US policy-makers decided that Castro must go.

Within a year of Castro taking power, several counter-revolutionary groups were formed by Cuban exiles in Miami. The American Central Intelligence Agency (CIA) took an interest in these groups, providing them with training and equipment to topple the Cuban government.

The failure at the Bay of Pigs was largely down to poor planning and President Kennedy’s reluctance to become too involved.

**Pro-Cuba demonstrations**
Castro forged a closer alliance with the Soviet Union, its ally against American aggression, enabling him to export his ideals across Latin America. The invasion incited pro-Cuba anti-US demonstrations from Chile to Mexico. Castro actively supported guerrilla warfare, and thousands of Latin American guerrillas went to Cuba for training. The revolution in Cuba inspired similar uprisings through the 1960s and 70s in Nicaragua, Brazil, Uruguay, and Venezuela, where there was disaffection with illiteracy, inequality, and poverty.

Latin America continued to preoccupy US foreign policy. The US intervened several times in an effort to contain communism. They supported military coups in Chile in 1973 and Argentina in 1976 and, fearing a communist takeover, funded the El Salvadoran military in the late 1970s to prop up their regime. In 1983, the US invaded Grenada; and in 1989, Panama.

**Cuba must not be abandoned to the communists.**
*John F. Kennedy*

Fidel Castro

To his supporters, Fidel Castro (b.1926) was a revolutionary hero who stood up to the US. To his detractors, he was a dictator whose close ties with the Soviet Union brought the world close to nuclear war.

Jailed as a student in 1953 for his revolutionary activities, Castro was released two years later and went into exile in the US and Mexico. He returned to Cuba in 1956 with a small guerrilla band, among them the Argentine Marxist revolutionary Ernesto “Che” Guevara, and set to work undermining the regime of the dictator Batista. On January 1, 1959, he assumed absolute power. Castro was determined to improve literacy, offered free healthcare, and instituted land reforms.

Castro saw himself as a leader of the world’s oppressed people and helped train anti-Apartheid forces in South Africa. In the 1970s, he sent troops to support communist forces in Angola, Ethiopia, and Yemen.

In 2008, wracked by ill health, Castro stood down as president of Cuba, leaving power in the hands of his brother Raúl.
The Cultural Revolution was one of the darkest periods in Chinese history. Since taking power in 1949, Communist Party leader Mao Zedong had neither created his ideal China nor secured his power. To bolster his primacy and ignite revolutionary fervor, Mao decided to purge any opposition and transform capitalists and intellectuals into proletarians – ordinary workers. He ordered the Cultural Revolution, which would attack the “Four Olds”: old ideas, old habits, old customs, and old culture. Squads of young communists, incited by Mao and known as the Red Guards, terrorized intellectuals,
In this propaganda poster dating from around the time of the Cultural Revolution, the Red Guards are shown with a copy of Mao's Little Red Book.

In the late 1950s, in a bid to achieve rapid economic growth, Mao ordered the Great Leap Forward. Industrial output climbed with steel and coal production, the rail network doubled, and more than half of all Chinese land was irrigated by 1961.

However, this development came at a terrible cost. Mao transformed rural China into a series of farming communes in which villagers pooled land, animals, tools, and crops. The authorities took vast amounts of grain from the communes to feed city workers, and this, along with a series of natural disasters, led to famine and starvation. The consequences were staggering: an estimated 45 million people died.

**A new foreign policy**
After the Cultural Revolution, Mao needed American expertise to restore China, and the US wanted an ally against the Soviet Union. In 1972, US President Richard Nixon traveled to Peking to meet with Mao. By the time Mao died in 1976, China had become a major oil producer with nuclear capabilities.

Deng Xiaoping, who led China from 1978 to 1997, was willing to use capitalist ideas to focus on economic growth. But while he initiated new and far-reaching measures, such as inviting foreign firms to invest in Chinese industry and supporting developing technologies, he also resisted pressure to make democratic reforms.

By the beginning of the new millennium, China's economic growth was spectacular. In 2001, the country was admitted to the World Trade Organization, and in 2008 it played host to the Olympic Games in Beijing. Some economists predict that by 2026 China will boast a gross domestic product (GDP) greater than Japan and Western Europe.

After Mao's death, the Chinese Communist Party condemned the Cultural Revolution as a disaster. However, as the country experienced a period of unparalleled economic growth, a sense of nostalgia for Mao's ideals, focused on the people and self-sufficiency, grew among farmers and members of the urban working class. Today, Mao's legacy continues to cast a long shadow over a modernizing China.

---

**Mao Zedong**

Born in 1893 into a wealthy farming family from Hunan Province, Mao Zedong was the leader of Communist China from 1949 until his death in 1976. While working as a librarian at Peking University, he became a communist and helped found the Communist Party in 1921. Six years later, after leading an unsuccessful rebellion against nationalist leader Chiang Kai-shek, Mao was forced to retreat to the countryside, where he proclaimed the Chinese Soviet Republic in 1931. He took control of the Communist Party in 1935, after proving his leadership during the Long March, and defeated Chiang during the civil war of 1945–49.

A devoted Leninist, Mao became disenchanted with the Soviet policy of “peaceful coexistence” toward the West and developed Maoism, a stronger form of communism. However, his radical ideas and experiments with collectivization led to the death and suffering of millions. One of his last acts, in 1972, was to hold a meeting with Richard Nixon, the first American president ever to visit China.
WE SHALL DEFEND IT WITH OUR BLOOD AND STRENGTH, AND WE SHALL MEET AGGRESSION WITH AGGRESSION AND EVIL WITH EVIL

THE SUEZ CRISIS (1956)

ON July 26, 1956, Egyptian leader, Colonel Gamal Abdel Nasser, addressed a crowd in the city of Alexandria, declaring the nationalization of the Suez Canal, the waterway through which most oil bound for Western Europe had to pass. For Egyptians, the nationalization symbolized the liberation of their country from the British imperialist dominance it had been under since the 1880s. In response to Nasser’s bold move, a secret plan was hatched by Britain, France, and Israel. France was eager for Nasser’s downfall because of his support for Algerian insurgents against French colonial rule in Algeria. Israel had many reasons for

2011 Protestors across Arab states demand reforms in a series of popular uprisings.
toppling Nasser, including Egypt’s denial of passage through the canal to any Israeli-flagged ships. The three conspired that Israel would attack Egypt, and Britain and France would intervene a few days later posing as peacemakers, taking control of the canal. On October 29, 1956, the Israelis began their assault. British and French troops invaded on October 31, but faced immediate diplomatic pressure to call a ceasefire. The United States, which was trying to cultivate good relations with Arab states, was appalled by the Anglo-French invasion, believing it threatened the stability of the whole region. President Dwight Eisenhower forced through a United Nations resolution imposing a ceasefire, and British and French troops had to conduct a humiliating withdrawal.

Splitting the land
The strong anti-Western sentiment in the Middle East dates back hundreds of years, fueled by the West’s increased involvement in the region. Colonialism in the 1800s and the division of the Ottoman Empire after World War I were bitter humiliations for peoples who felt their religion, Islam, was the highest form of divine revelation. In 1948, the partition of Palestine to form Israel split the land into two states, one Arab and one Jewish, and was rejected vehemently by Israeli Arabs and enraged the other Arab nations. The regular armies of the Arab states—including Iraq, Lebanon, Syria, Transjordan, Saudi Arabia, Yemen, and Egypt—attacked Israel in the first Arab–Israeli War in May and June 1948. The war ended in defeat for the Arabs and disaster for the Palestinians: more than half of the country’s Arabs were uprooted as refugees, and they lost any possibility of a state of their own.

Ambitious plans
Egypt continued its stance of belligerence toward Israel by closing the Suez Canal to Israeli shipping. When Nasser ousted the regime of King Farouk in 1954 and sent him into exile, he imported arms from the Soviet Union to build his arsenal for future confrontations with Israel. Britain had agreed to withdraw its troops from the Suez area by June 1856, but as the last troops left Egypt, Nasser relied on funds from Britain and the US to fund ambitious plans to develop Egypt. This included the Aswan Dam project on the Nile. Nasser was angered when Britain and the United States withdrew its offer of loans to help him pay for the dam. The US and Britain backed out

President Nasser of Egypt announces the nationalization of the Suez Canal to a quarter-million-strong gathering in Alexandria celebrating four years since the revolution.

Israel is founded in Palestine.

There is a rise in Arab nationalism.

The Suez Crisis deals a blow to British and French imperialism and stirs anti-Western sentiments in the Muslim world.

The Israeli–Arab dispute widens to become an Israeli–Arab conflict.

The United States becomes the main backer of Israel.

There is an increase in Palestinian liberation movements.

Chaos and violence grip the Middle East.
because of Nasser’s association with the Soviets and his unceasing diatribes against the West. Nasser felt insulted and immediately nationalized the Suez Canal. The move was popular in Egypt, as the canal was a source of Arab pride.

Nasser was a secular modernizer who advocated the separation of religion from political life, believing it the hallmark of Arab modernity, but this was not universally welcomed. The Muslim Brotherhood, founded in Egypt in 1928, argued for Islam to have a central role in government. After repeated calls for the application of Sharia law—a legal system based on Islam—and an assassination attempt against Nasser, the organization was finally banned in 1954.

In 1967, Arab countries suffered a crushing defeat at the hands of Israel in the Six Day War, in which Israel took the Sinai from Egypt, the Golan Heights from Syria, and the West Bank and East Jerusalem from Jordan, meaning Israel was now an occupier. In the 1970s and 80s, the Arab–Israeli conflict largely moved in the direction of peace: in 1979 the Israeli–Egypt peace deal ended 30 years of war. The rise of the Palestine Liberation Army (PLO) and of other Palestinian groups attacking Israel, however, as well as Israel’s invasion of Lebanon in 1982, where many of the PLO were grouped, destabilized the fragile peace continuously.

The Iran–Iraq War
Like many countries in the Middle East, modern Iraq was carved out of the ruins of the Ottoman Empire in the aftermath of World War I. Iraq was a land divided along ethnic lines between Arabs and Kurds, as well as sectarian lines between Sunni and Shia Muslims, the latter being the majority group. Saddam Hussein, a Sunni, became leader in 1979, and suppressed ethnic Kurds and Shias alike using immense brutality. He, like Nasser in Egypt, espoused Arab nationalism and ruled Iraq as a secular state.

In 1979, events in Iran inspired Islamists throughout the Middle East. The secular, Western way of life was swept away in an Islamic revolution in which the US-backed Shah was ousted. The new regime, under Ayatollah Khomeini, a Shia Muslim, basing its laws and ideology on the strict teachings of the Koran. Saddam felt threatened by the Islamic revolution and a possible Shia uprising in his own country, so he invaded Iran on September 22, 1980 under the pretext of a territorial dispute over the Shatt al-Arab, a waterway that lies between the two countries.

The invasion triggered a bruising eight-year war that devastated both countries and increased tensions in the Middle East. Iran’s principal ally was Syria, but Libya, China, and North Korea all also sent it weapons. Iraq’s support came mostly from the Arab Gulf states, which viewed Iran as the greater danger to their security; Saudi Arabia and Kuwait provided billions of dollars in loans. Ultimately, Iran was defeated; and Iraq, now awash with armaments supplied by several Western nations, including Britain, France, and the United States, invaded the oil-rich state of Kuwait in 1990. The UN demanded their withdrawal, but Saddam announced that Kuwait had been annexed by Iraq. The United States, with support from coalition forces, sent in troops during the First Gulf War (1990–91) and toppled Saddam from power.

The 9/11 attacks
The continued US support of Israel led to profound grievances among Islamists. To them, the capitalist, secular US, with its greed for oil, symbolized all that was wrong with the West, and terrorist strikes on US targets grew. Al-Qaeda carried out the most shocking on September 11, 2001, against four targets in the United States, including the World Trade Center in New York City. In response to the 9/11 attacks, a successful US-led international intervention brought down the Taliban regime in Afghanistan, which the US believed had given sanctuary to Osama bin Laden and
al-Qaeda. After September 11, President Bush declared a “War on Terror” and, in 2002, with help from the British government, attacked Iraq on the premise of destroying “weapons of mass destruction” (WMDs) deemed a threat to national security. Western intervention in the Muslim world heightened the belief among Islamists that the West was the enemy of Islam.

The Arab Spring
The 9/11 attacks were inspired by a radical ideology and belief that the fundamental problems plaguing Arab and Muslim people could be resolved by attacking foreign powers that were seen to oppress Islam. In 2011, young Arabs—looking inward to promote change and blaming their own leaders for decades of political, economic, and cultural decline—were at the heart of uprisings across the Arab world. At its core, what became known as the Arab Spring was a new generation’s attempt to change the state order. An extraordinary series of pro-democracy uprisings, the Arab Spring caused huge upheavals in the Middle East and North Africa. It started in Tunisia on December 17, 2010 when a street vendor set himself on fire in a protest against police brutality. Protestors throughout Tunisia demanded democracy, and President Zine el Abidine fled the country on 14 January. Disorder spread from Tunisia to Algeria, where there was unrest over lack of jobs.

On January 25, thousands of protestors took to the streets in Egypt, and after 18 days of protests there, President Hosni Mubarak resigned. By mid-February, civil unrest had swept through Bahrain, where it was brutally suppressed, and into Libya. Muammar Gaddafi’s violent response to the dissidents led to civil war. An international coalition led by NATO launched a campaign of air strikes targeting Gaddafi’s forces, and he was killed in October 2011.

Further uprisings occurred in Jordan, Yemen, and Saudi Arabia, but the worst violence against civilians was seen in Syria, where President Bashar Assad promised reforms but used force to crush the dissent—a move that merely hardened the protestors’ resolve. In July 2011, hundreds of thousands of people took to the streets, and the country descended into civil war. By August 2015, the United Nations reported that more than 210,000 people had been killed in the conflict. Capitalizing on the chaos in the region, so-called Islamic State (also referred to as IS, ISIS, or ISIL), the extremist Muslim group that replaced al-Qaeda, took control of huge swathes of territory across northern and eastern Syria, as well as neighboring Iraq.

Middle East instability
The Suez Crisis was the end of one era in the politics of the Middle East and the start of another. It marked the humiliating end of imperial influence for two European countries, Britain and France, whose role was soon taken over by the US. It stimulated Arab nationalism and opened an era of Arab-Israeli wars and Palestinian terrorism.

In modern times, the Middle East has never seemed so unstable. Wars are being fought over religion, ethnicity, territory, politics, and commerce, and these conflicts have led to the worst refugee crisis since World War II, with millions fleeing anarchy and fanaticism.

Terrorism in the Middle East
Since the mid-20th century, terrorism has been synonymous with the Middle East. The Israel–Palestine conflict is one of the world’s most challenging.

In 1964, Arab leaders formed the Palestine Liberation Organization (PLO), declaring Israel’s establishment illegal. The PLO used terrorism to attack Israel and Western targets for their support of Israel. In 1970, Palestinian militants blew up three hijacked planes in the Jordanian desert, and in 1972 a group linked to the PLO hit the Israeli Olympic team during the games in Munich, Germany.

In 1983, Hezbollah, an Iran-backed fundamentalist Shiite Muslim group in Lebanon, blew up the Beirut barracks of both US Marine and French forces, killing 298 people. Hezbollah pioneered the use of suicide bombers in the Middle East.

Both Jews and Muslims have employed terrorism to derail the many attempts that have been made at peace in the region.
For decades, the Berlin Wall, which separated East and West Berlin, stood as a reminder of the Cold War, the bitter division between Soviet communism and Western capitalism. On November 9, 1989, the East German government lifted travel restrictions, and thousands of people began converging at the wall. East German border guards yielded in the face of ecstatic crowds. On November 10, in extraordinary scenes, soldiers from both sides helped Berliners break through the wall. Over the next two days, more than 3 million people crossed the border.
The fall of the Berlin Wall meant liberation for many people. German reunification, the collapse of the Soviet Union, and the end of communism in Eastern Europe followed soon after.

banned trade union, was elected to lead a coalition government. As the push for reform gathered pace, the East German government declared that its citizens would be able to visit West Berlin through any border crossing, including the Berlin Wall.

The fall of the Berlin Wall was a momentous event. It marked an era that saw the end of the Cold War and the dissolution of the Soviet Union. It allowed millions to travel more freely, and previously stifled economies across Eastern Europe and the Former Soviet Union opened up to the world. Many former communist countries were welcomed into NATO and joined the European Union.

The world changed course in 1989. Communism was dead in the East, and a reunified Germany was about to take its place at the heart of Europe.

Ruling the Eastern Bloc
At the end of World War II, the USSR had banned anti-communist parties in every Eastern European country, and created a bloc of satellite states under Soviet leadership, ruthlessly suppressing any opposition. In the fall of 1956, Hungary rose against its communist government, only to be crushed by Soviet tanks, and in 1968, the USSR invaded Czechoslovakia to remove a government it found too liberal.

In the 1960s, Germany was still divided between East and West, and its former capital Berlin split into the Allied-operated West and the Soviet-controlled East. Each had its own German administration: democratic in the West, communist in the East. Thousands of East Germans escaped to the West, and the country hemorrhaged its skilled workers. On August 13, 1961, the government sealed off East from West Berlin with a fence, which, over time, became a heavily fortified barrier dividing the city, the nation, and family and friends.

In 1985, Mikhail Gorbachev was appointed as General Secretary of the Soviet Communist Party. Aiming for warmer relations with the West, he set out new reforms: glasnost (political “openness”) and perestroika (liberal economic “restructuring”). Critically, he lifted the ban on Eastern Bloc countries reforming their political systems.

Collapse of communism
With the threat of Soviet military intervention removed, citizens in all Eastern Bloc countries protested to end communist rule. In June 1989, Poland’s Solidarity, originally a banned trade union, was elected to lead a coalition government. As the push for reform gathered pace, the East German government declared that its citizens would be able to visit West Berlin through any border crossing, including the Berlin Wall.

The fall of the Berlin Wall was a momentous event. It marked an era that saw the end of the Cold War and the dissolution of the Soviet Union. It allowed millions to travel more freely, and previously stifled economies across Eastern Europe and the Former Soviet Union opened up to the world. Many former communist countries were welcomed into NATO and joined the European Union.

The world changed course in 1989. Communism was dead in the East, and a reunified Germany was about to take its place at the heart of Europe.

The break-up of the Soviet Union
In 1985, Mikhail Gorbachev became leader of a stagnating Soviet Union. He laid out radical reforms—glasnost and perestroika—and in July 1989 he announced that countries within the Warsaw Pact could hold openly contested elections. Poles, Czechs, Hungarians, and others opted for democratic governments, destabilizing the Soviet Union itself.

In July 1991, the anti-communist Boris Yeltsin was elected president of Russia. A month later, with Gorbachev weakened by an attempted coup by hardline communists, Yeltsin took advantage. He banned the Communist Party in Russia and met secretly with the leaders of Ukraine and Belarus, who agreed to secede from the Soviet Union. On Christmas Day 1991, Gorbachev resigned, leaving Yeltsin as president of the new Russian state. The former empire split into 15 new independent states, and the USSR was no more.

Radical post-war politics

BEFORE
1963 The Feminine Mystique by Betty Friedan reignites the women’s rights movement.
1967 The killing in Berlin of student demonstrator Benno Ohnesorg sparks a revolt.
March 1968 Demonstrators in Italy protest against police brutality.

AFTER
1969 The Days of Rage demonstrations in Chicago use violence to protest against the Vietnam War and US racism.
1970s The radical group Japanese Red Army protests the presence of US military bases in Japan.
1978 The Italian Red Brigades take former prime minister Aldo Moro hostage as part of their left-wing terrorist campaign.

In 1968, a small demonstration over poor campus facilities at Nanterre University in a suburb of Paris, France, spread across the country. In March, riot police were called to deal with the unrest, and hundreds of students descended on Nanterre. By May, the uprising had moved to the center of Paris, and the number of protestors swelled to thousands. Tension erupted on the streets, as demonstrators called for revolutionary social change and the collapse of the government. Within a few days, 8 million workers went on a wildcat strike that brought France to a standstill.

A momentous year
France’s journey to near revolution is the defining event of 1968, a year of global protest. Much was against the Vietnam War, but many people also marched against oppressive regimes. Politics became more radical: the “coming out” of sexual minorities, women’s liberation, and sexual equality came to the fore. In the United States, groups such as the Black Panthers fought for racial equality; and the German Student Movement, led by Rudi Dutschke, opposed the older generation, who had been part of World War II.

The French protests lost steam as elections showed overwhelming support for the government. The revolutionary movements of 1968 ultimately failed, but they inspired a generation to question authority. In their wake came a rise in left-wing terrorist groups that used bombing and kidnapping while purporting to fight for social justice.

What’s important is that the action took place, when everybody judged it to be unthinkable.
Jean-Paul Sartre

Nelson Mandela received a life prison sentence in 1964 for his role in anti-apartheid protests held in Sharpeville, South Africa. Mandela was a militant member of the African National Congress (ANC), set up to campaign against apartheid, a system of racial segregation enforced by the white ruling government. While in prison, Mandela had become a symbol of the struggle for racial equality. On his release in 1990, he was greeted with euphoria.

When the Nationalist Party was elected to power in 1948, white Afrikaners implemented a brutal apartheid policy—black people were segregated and could not vote. Many in the anti-apartheid movement advocated non-violent protest, which helped rally white South Africans to their cause. Apartheid was globally condemned, and tough international sanctions were imposed.

A new dawn
In 1990, President F. W. De Klerk astounded the world by lifting bans on the ANC. Seeing the need for fundamental change, he had been in secret negotiations for two years to end the apartheid system.

Multiracial elections were held in 1994, and Mandela won by a huge margin. His release was one of the defining moments of the late 20th century, ending 300 years of white rule in South Africa. It transformed the country into a multiracial democracy without the bloody civil war that so many had feared.

“Friends, comrades, and fellow South Africans, I greet you all in the name of peace, democracy, and freedom for all. Nelson Mandela”

Create an Unbearable Situation of Total Insecurity with No Hope of Further Survival or Life
The Siege of Sarajevo (1992–1996)

The Siege of Sarajevo, Bosnia, was one of the most appalling tragedies in Yugoslavia’s civil war (1991–2002). During the 44-month siege, the city’s food and electricity supplies were cut off, and the civilian population was bombarded by nationalist Bosnian Serbs. Thousands of Bosnian Muslims were targeted and murdered.

A New Wave of Nationalism
Yugoslavia was comprised of six socialist republics: Croatia, Montenegro, Slovenia, Bosnia and Herzegovina, Macedonia, and Serbia, each with its own prime minister and constitution. Overall power in Yugoslavia was held by a president, notably communist leader Josip Broz Tito from 1953 to 1980.

After the 1991 break-up of the Soviet Union, a nationalist revival swept Eastern Europe. Croatia and Slovenia’s call for independence was opposed by Serbia, and Vukovar, in eastern Croatia, was destroyed by the Yugoslav army under Serbian leader Slobodan Milosevic. When Bosnia also declared independence in 1992, the violence intensified. Bosnian Serbs aimed to create a separate ethnically pure Serbian state, the Republika Srpska, carving it from the new Republic of Bosnia-Herzegovina. Nationalist Bosnian Serbs, supported by neighboring Serbia, launched a campaign to expel non-Serbs, and during the Siege of Sarajevo, they targeted the majority Bosnian Muslim population.

The Bosnian War ended in 1995, but fighting continued in Kosovo, where ethnic Albanians began a separatist movement against the Serbs. Ethnically based nationalism also led to bloody anti-Armenian pogroms in the Nagorno-Karabakh region and in Baku, the capital of Azerbaijan. In Georgia, violence erupted between the Georgian and Abkhazian population.

The wars in Yugoslavia forced the issue of the global community’s responsibility to resolve disputes that threaten wider instability or cause unacceptable human suffering or rights violations.

On September 11, 2001, a group of Islamic extremists launched a devastating attack against the US. Two hijacked airliners crashed into the World Trade Center in New York; another hit the Pentagon, in Washington, DC; and a fourth plane crashed in Pennsylvania. Almost 3,000 people were killed.

The seeds of extremism
September 11 was not the first terror attack on American soil by Islamic extremists. On February 26, 1993, a bomb was detonated at the World Trade Center by men thought to have links to al-Qaeda, a militant Islamist organization. Some Muslims had been radicalized and adopted international terrorism during the struggles over Israel. In 1979, the Soviet invasion of Afghanistan led to the worldwide mobilization of Muslim militants to fight the invaders. Around that time, Osama Bin Laden formed al-Qaeda. Intelligence reports suggested that he was the mastermind behind September 11. He was killed in 2011.

The civil war in Syria since 2011 and the power vacuum left by the departure of US forces in Iraq has led to the emergence of ISIS, the so-called Islamic State of Iraq and Syria, which has taken control of several towns in the region.

The events of September 11 mark the largest terrorist attack ever on US soil. Subsequent attacks in London, Madrid, and Paris, carried out by a diffuse network of regional terrorist groups, have added a chilling dimension to the threat of Islamic terrorism.

YOU AFFECT THE WORLD BY WHAT YOU BROWSE
THE LAUNCH OF THE FIRST WEBSITE (1991)

The US military sets up the Advanced Research Projects Agency Network (ARPANET).

The ARPANET grows and develops to become the Internet.

The first website is launched to help users navigate the Internet.

The Web becomes a global telecommunications tool used by millions.

The Internet radically changes how the world shares information and conducts business.

The first website was titled “World Wide Web” and gave basic information about the World Wide Web project and how to create Web pages. It was built by Tim Berners-Lee, a British computer scientist at the European Organization for Nuclear Research (CERN) in Geneva, Switzerland.

Berners-Lee was interested in facilitating the exchange of ideas between scientists in universities and research institutes, and he first proposed his idea for a worldwide network of computers sharing information in 1989. His site went live in 1991 and was accessed by a small group of fellow CERN...
researchers. Crucially, Berners-Lee persuaded CERN that the World Wide Web should be given to the world as a free resource.

Although it revolutionized the computer and communications world like nothing before, the World Wide Web was only possible by bringing together several existing technologies: the telephone, television, radio, and Internet.

The Internet
The Soviet Union’s launch of the Sputnik 1 satellite in 1957 spurred the US Defense Department to consider means of communication after a nuclear attack. This led to the formation of the ARPANET (Advanced Research Projects Agency Network) in 1969, a system initially of four computers. In the mid-1980s, this growing network of interconnected computers became known as the Internet. Both the Internet and the World Wide Web were limited to academic and research organizations.

It wasn’t until the 1993 launch of a user-friendly Web browser called Mosaic that the Web took off for more general use. Mosaic could show pictures as well as text, and users could follow Web links simply by clicking on them with a mouse. The Web became synonymous with the Internet, but they are distinct from one another. The World Wide Web facilitated navigation of the Internet and helped make the Internet such an effective mode of communication.

The computing revolution
The introduction in 1981 of IBM’s 5150 personal computer drove a revolution in home and office computing. Smaller and cheaper than the large office computers, it and its successors had access to the Internet and email. With personal computers, the Internet saw huge growth. The first search engines began to appear in the early 1990s; Google, which is now almost synonymous with Web searches, arrived a little later, in 1997. The launch of online marketplace Amazon in 1994 revolutionized the way people shopped, allowing the purchase of everything from books and CDs to hotel rooms and airline tickets from the comfort of home.

The Internet brought about significant changes to the way businesses operated; globalization escalated, and the world seemed to become a much smaller place, with communication improved by the speed and efficiency of the Internet. Jobs were outsourced, and companies effectively became “nationless,” since it was easier to operate from anywhere in the world.

The next wave of technological advances saw devices become smaller and more mobile due to electronic components on tiny integrated circuits, or “chips.”

The future is now
Nowhere has the introduction of microchip technology had more impact than the introduction of the Apple iPhone in 2007. So-called smartphones have made the Internet a mobile resource, with wireless connectivity offering on-the-go access to news and satellite navigation, for example. Information and ideas can be shared from anywhere at the touch of a button via social-networking sites such as Facebook and Twitter. Smartphones have also had an impact on education, healthcare, and culture, and have changed the political landscape through use by protestors organizing rallies via social media to undermine regimes. Uprisings such as the Arab Spring, which began in 2010, were partly powered by activists who communicated across the Internet. Internet activism, or “clicktivism,” has since become a powerful way to share ideas, raise awareness, or support a cause. With more than 3 billion users, the World Wide Web has transformed every aspect of modern daily life.

Sir Tim Berners-Lee, creator of the World Wide Web, was fascinated by computers from a young age. Today, he is an advocate for an open and free Internet.

‘The information highway will transform our culture as dramatically as Gutenberg’s press did the Middle Ages.’

Bill Gates
The turn of the 21st century brought troubling signs of a worldwide recession. Low interest rates and unregulated credit had induced more and more people to get into unsustainable debts. Bankers, particularly in the US, offered mortgages to customers with a poor credit history. These mortgages were called “subprime mortgages”. It was hoped that if people could not keep up with their mortgage payments, their houses could be repossessed and sold at a profit, but this depended on house prices rising. In 2007, interest rates crept up, and house prices fell. People began defaulting on their monthly repayments. Across the US,
houses were repossessed at a great loss, with bankers fearing they would not get their money back.

**The crisis spreads to Europe**

In August 2007, the French bank Paribas revealed that it was at risk from the subprime mortgage market. Bankers had gambled with trillions of dollars of investment on risky mortgages that might now be worthless. Panic set in, and banks stopped lending to one another. British bank Northern Rock faced a shortage of readily available cash, and was forced to ask the British government for an emergency loan.

Around the world, shares began to plummet. In September 2008, US mortgage lenders Fannie Mae and Freddie Mac were rescued by the American government, while Lehman Brothers, a powerful investment bank heavily involved in the subprime mortgages market, was forced to file for bankruptcy. The US government considered Lehman Brothers too insolvent and did not bail it out.

The turmoil in financial markets led to a severe economic downturn in most Western economies. Share prices plummeted, and world trade decreased because governments spent less. Ireland became the first European country to fall into recession, a period of economic decline. Iceland’s government resigned in October 2008 after the country became almost bankrupt. Some governments—such as those in the US, China, Brazil, and Argentina—planned stimulus.
packages to boost their economies. They increased government spending and decreased taxes. Others, especially in Europe, opted for austerity, freezing public spending, and increasing taxes. Protests and strikes swept through Europe in response to these measures. Portugal, Spain, and Greece came under pressure from the European Union (EU) to lower their debts. The EU spent billions propping up weak economies in an attempt to keep the Eurozone, and the euro, viable. But the effect of the economic crisis was devastating, and many people lost their homes and jobs. It was the worst economic downturn since World War II.

Post-war economy
After World War II, most of Europe, Japan, China, and the Soviet Union, all devastated by war, needed time to recover. The US, which had experienced a huge rise in manufacturing for the war effort and was spared destruction, continued manufacturing at higher levels than ever before and dominated the world economy. The post-war economic planners sought a new economic order based on industrial strength and a stable dollar. In 1944, the International Monetary Fund (IMF) was formed to foster the revival of global trade. The US’s strong post-war economy and the Marshall Plan of 1947, a US-led initiative to aid Western countries, invigorated world trade through encouraging capitalism and the free exchange of goods between nations. Signed in 1947, the General Agreement on Tariffs and Trade (GATT) dictated that tariffs be removed to open up markets around the world.

The Asian tiger
Japan, meanwhile, saw massive economic growth. The Japanese government implemented reforms based on efficiency and restricted foreign imports. They did not sign up to the GATT agreement until 1955. Japan invested in its coal and steel industries, as well as shipbuilding and car manufacturing. In the 1960s, Japan specialized in high-tech products such as cameras and computer chips. Countries such as South Korea, Taiwan, Singapore, and Malaysia experienced similar growth with an emphasis on electronics and technology. These successes became collectively known as “Asian tiger economics.”

The oil crisis
that struck Western countries in 1973–74 was the result of the Yom Kippur War. Fuel rationing in the US led to scenes such as this, with motorists getting stranded.

The role of oil
By the 1970s, the world was divided between rich industrial countries and poor developing nations, and oil had become increasingly important. In 1960, the Organization of Arab Petroleum Exporting Countries (OAPEC), including Saudi Arabia, Egypt, Iraq, and Iran, was founded. As oil reserves in other countries dwindled, the states around the Persian Gulf, where this resource had remained plentiful, became dominant. In October 1973, when Egypt and Syria invaded Israel during the Yom Kippur War, OAPEC embargoed oil to any country helping Israel, and prices tripled. Without oil, industrial output dropped. The United States introduced strict fuel rationing, which ended in March 1974, when the oil embargo was lifted.

A new economic model
The oil crisis in the mid-1970s led to a deep global recession, soaring inflation, and high unemployment. In response, a new “neo-liberal” economic policy was adopted, transferring control of economic factors from the public to the private sector. Welfare programs were perceived to be one cause of economic failures, and there were drastic cutbacks. Deregulation became the driving force behind world economics, sweeping away many governmental controls and freeing up organizations to trade across a wider range of territories. The need for this was particularly felt in the United States, which faced stiff competition from a world now fully rebuilt from the
September and October of 2008 was the worst financial crisis in global history, including the Great Depression.  

Ben Bernanke  
Former head of the Federal Reserve

Global economy  
The world economy is now far more open. Internet use allows people to order goods in one part of the world and have them delivered elsewhere within a matter of days. World trade is made up of global partnerships, with multinational companies that boast huge turnovers. Across the globe, people tend to migrate to cities to find work, resulting in an increase in urbanization.

One complaint that is often aimed at globalization is that some companies exploit cheap labor and behave unethically in their bid for profit. Another is that globalization has contributed to the extraordinary accumulation of wealth by a few individuals and, thus, increased inequality. Some countries have also remained extremely poor—areas of sub-Saharan Africa, for example have fared badly and been left behind, in debt to wealthier nations.

Economic recessions have occurred throughout history, but the financial crisis of 2008–11 was the worst—at least since the Great Depression of 1929—and maybe the worst ever. Many felt it was an avoidable disaster caused by widespread failures in government regulation and heedless risk-taking by investment bankers. Only massive monetary and fiscal stimuli prevented catastrophe. Household and business debts remained high, and there was widespread fury directed at bankers, whom many felt had survived relatively unscathed. Austerity measures provoked civil unrest. Demonstrations were held against capitalism; the Occupy Movement spread, with tens of thousands marching in New York, London, Frankfurt, Madrid, Rome, Sydney, and Hong Kong. While financiers argued over the causes of the Global Recession, the impact on the lives of ordinary people had profound, lasting consequences.

An era of protest  
The global economic crisis that began in 2008 generated much anger at institutional symbols of power and greed, and there was an upsurge of popular protest. Demonstrations united those venting at bankers and capitalists, anti-globalization protestors, and environmentalists. There was growing anger at the level of inequality, corporate greed, and the lack of jobs.

When the G20, an international forum for finance ministers, met in the financial heart of London in 2009, they were faced with thousands of angry protestors. Social media became critical in the organization of large gatherings and the occupation of physical spaces. As protests spread throughout Europe, they used the banner of “Occupy,” a movement set up in New York to protest against social and economic inequality. There were riots in Rome, strikes in Greece, demonstrations in Portugal, and occupations in the public squares of Barcelona, Moscow, Madrid, New York, Chicago, and Istanbul.
THIS IS A DAY ABOUT OUR ENTIRE HUMAN FAMILY

GLOBAL POPULATION EXCEEDS 7 BILLION (2011)
On October 31, 2011, a baby girl born in Manila, the capital of the Philippines, was chosen by the United Nations (UN) to symbolically represent the 7 billionth person on earth. To mark this global-population milestone, October 31st was named Seven Billion Day, but with a billion people reported to be going hungry at that time, debates were rekindled about whether the Earth could support so many people.

Before the 17th century, the world’s population increased very slowly, but it began to expand rapidly after 1850. This was in part due to a reduction in the number of children dying in infancy, but death rates fell overall, too, as new farming technology expanded the food supply and lowered the risk of famine. The marked increase of industrialization and advances in medicine improved public health and living standards.

By 1927, the world-population figure had reached 2 billion. In the early 20th century, population growth was highest in the rich industrialized West, but this pattern began to change. Mid-century saw many European countries experience falling birth rates, while population growth increased sharply in the relatively underdeveloped areas of Asia, Africa, and South America due to a much higher birth rate. In 1987, the 5 billionth person was born; and by 1999, the 6 billionth. It took 123 years for the world’s population to go from 1 billion to 2 billion but had taken only 12 years to make the leap from 6 billion to 7 billion.

The Green Revolution
During the early 20th century, many countries imported large quantities of food that they were unable to grow themselves, to enable them to meet the demands of a growing population. Britain, for example, imported 55 million tons of food each year.

In the early 1940s, Mexico imported half of its wheat, and its population was rapidly expanding. The country requested technical expertise from the United States on ways to increase wheat production. By 1944, with the financial support of the American Rockefeller Foundation, a group of US scientists, including American biochemist Norman Borlaug, had begun
researching methods of developing a high-yielding strain of wheat that could resist disease and was short in height, so as to reduce wind damage. The work in Mexico was incredibly successful: by 1956, the country was totally self-sufficient and no longer imported wheat and maize. This success launched what became known as the Green Revolution—the spread of new modern agricultural technologies in the 1960s and 70s that dramatically increased food production around the world. The Green Revolution benefited countries that included the Philippines, Bangladesh, Sri Lanka, China, Indonesia, Kenya, Iran, Thailand, and Turkey.

Indian scientists in particular had followed the work of Borlaug and his colleagues. In the mid-1960s, India had been struck by two back-to-back droughts, which led to the need for large food imports from the United States. In 1964, both India and Pakistan began importing and testing semi-dwarf varieties of wheat from Mexico, and the results were promising: in the spring of 1966, the harvest was larger than any ever produced in South Asia, despite it being a dry year.

Miracle rice
In 1960, a new so-called miracle rice known as IR-8 was developed at the International Rice Research Institute in the Philippines. With its much reduced growing cycle, this new product brought about a dramatic transformation in farmers’ lives. In countries such as Vietnam, two complete crops of the new rice could now be produced each year, whereas the traditional rice it replaced would only produce one crop. Stunning innovations such as this in agricultural science allowed chronically poor countries, in Asia in particular, to feed themselves and meet the demands of their growing populations.

The Green Revolution did not come without controversy, not least because it involved a move toward chemical pesticides. During the 1940s, the insecticide DDT (dichloro-diphenyl-trichloroethane) was introduced as a way of controlling a variety of diseases, including mosquito-borne malaria, with a single treatment. However in 1962, American biologist Rachel Carson highlighted the dangers of DDT in her groundbreaking book *Silent Spring*, claiming that it may cause cancer and also be bad for the environment. *Silent Spring* led to a nationwide ban on DDT in the US and raised enough concern to trigger the establishment of the Environmental Protection Agency (EPA), an independent body to safeguard the environment. The Green Revolution also faced huge challenges in many countries in Africa, where there was a lack of irrigation facilities, unreliable rainfall, high fertilizer prices, and no credit to buy new seed varieties.

GM crops
Genetically modified (GM) crops were greeted with excitement in the 1990s and regarded as part of the }
Second Green Revolution, but this, too, proved controversial. GM crops are foods produced from organisms that have had changes added into their DNA via genetic engineering. They were introduced in America in 1994 when the US Food and Drug Administration (FDA) approved the Flavr Savr tomato for sale. The delayed-ripening tomato had a longer shelf-life than conventional tomatoes, but trials using potatoes suggested that GM produce was toxic to rats. Most European Union (EU) governments banned the use of GM crops, while supporters of GM suggested that without genetic intervention, the world was destined to starve. Advocates of GM—notably the US, Brazil, Canada, Argentina, and Australia—believe it has the potential to combat disease and hunger. The feeling in Europe, Africa, and Asia is more cautious, with concern about pesticides and possible harm to health.

Despite such opposition, GM technology is still being developed. It is thought that 670,000 children die from lack of vitamin A each year, a deficiency that causes diseases such as malaria and measles and leads to blindness. Advances in the tackling of such deficiencies include, for example, the creation of “golden rice,” in which vitamin A is added to ordinary rice.

**Disappearing farmland**

While more—and stronger—crops were needed to feed an ever-growing global population, cities have swallowed up large tracts of farmland and rural areas. At the beginning of the 21st century, China experienced an onslaught of urban development that meant the loss of a large number of the country’s tiny farms.

People have historically been drawn to cities for employment and social opportunities. In 1800, one in four British people lived in cities, but by 1900 this had grown to three in four. Many moved from rural areas to the city, but people also moved from one country to another seeking refuge and a better life. The urban population in 2014 accounted for 54 percent of the total global population, up from 34 percent in 1960. In 2014, the UN predicted that two-thirds of the world will live in cities by 2050. However, lack of affordable accommodation is a key factor in homelessness: in sub-Saharan Africa, 70 percent of city-dwellers live in slums. Poor health and violent crime is an issue in the world’s major cities, as is the huge disparity between rich and poor.

**Climate change**

Urbanization and development have placed increasing stresses on the environment. As the world’s population grew, it became a

---

“This is not a political issue. Or a cultural issue. It’s not about saving whales or rainforests …

This is an emergency.

**Stephen Emmott**

Computer scientist and author
global challenge to improve living standards without destroying the environment. Scientists believe that human activity is to blame for climate change (or “global warming”). Since the Industrial Revolution in the 19th century, global temperatures have continued to rise, with 2011–15 the warmest five-year period on record.

Some of the reasons behind climate change are due to natural occurrences, but in the early 1970s the rise of environmentalism raised public doubts about the benefits to the planet of human activity. Developing nations were being urged to reduce carbon emissions, which are thought to effect climate change. In 2015, India was opening a mine a month to lift its 1.3 billion citizens out of poverty rapidly. Developed countries, which had themselves contributed to climate change, caused a new tension by suggesting that developing nations should cease exploiting their own natural resources to improve the economic well-being of their people.

Scientists warned that humans would pass the threshold beyond which climate change becomes catastrophic and irreversible if greenhouse-gas emissions kept increasing. Sea levels are also rising, eroding coastal areas and obliterating small islands in the South Pacific. Rainfall patterns are changing, leading to severe drought in Africa, and many species of animals are in danger of extinction.

The threat of climate change is now considered so serious that leaders from around the world met in 2015 in Paris, France, at a conference to agree to reduce the build-up of greenhouse gases. In fraught negotiations, developing countries demanded that wealthier nations help pay for them to adapt to the effects of climate change, such as increased floods and droughts. In all, 196 nations adopted the first ever universal, legally binding, global climate deal, limiting global warming to the relatively safe level of 3.6°F (2°C).

A hungry world
In the 1970s, ecology movements predicted that hundreds of millions would die from mass starvation by the mid-1980s. This dire prediction did not come to pass, but with an astonishing 7 billion humans on the planet, there is an inevitable drain on natural resources. Overfishing, particularly in Indonesia and China, has led to fish stocks around the world falling rapidly, and the demand for water could soon outstrip supply. In 2015, the UN predicted that 1.8 billion people will be living in countries or regions with absolute water scarcity by 2025. Coal, which drives industry and production, is in increasing demand but will eventually run out.

The UN estimates that by 2050 the global population will be at 9.7 billion, and that by 2100, 11.2 billion people will inhabit the Earth. Population dynamics are changing from high mortality and high fertility to low mortality and low fertility, with an increasingly elderly population worldwide, which will be difficult to support. Challenges such as climate change, migration and refugee crises, food and water insecurity, poverty, debt, and disease are greatly exacerbated by rapid population growth. Stabilizing the growth of the world’s population may be the key to global survival.
**FURTHER EVENTS**

**IRISH INDEPENDENCE**

(1922)

In the 1918 general election, republicans seeking independence from the United Kingdom won a majority of Irish seats. After the republicans set up their own parliament (the Dáil) and declared Ireland independent, Britain sent troops to quell the rebellion. By 1922, however, the two sides reached an agreement that most of Ireland should become independent as the Irish Free State, while the six northeastern counties, which had a Protestant majority, should remain part of the United Kingdom. This division is still in place to this day.

**THE SPANISH CIVIL WAR**

(1936–39)

In 1930–31, republicans overthrew Spain’s military dictatorship and forced King Alfonso XIII into exile. The republican government introduced socialist reforms and reduced the power of the church and the military. However, a revolt by disgruntled army officers and members of the Fascist Falange party led to civil war in 1936. The conflict escalated into an international ideological clash, with Fascist Italy and Germany supporting the right-wing Nationalists, while socialists from all over Europe volunteered to join their Republican comrades in Spain. Nationalist leader General Francisco Franco led his side to victory and ruled as dictator of Spain until 1975.

**WORLD WAR II IN THE PACIFIC**

(1941–45)

In December 1941, the Japanese bombed the US fleet in Pearl Harbor, Hawaii, and launched a campaign of invasion in Thailand, Malaysia, Burma, the Philippines, and other targets. This action brought the US into World War II. US and Japanese forces were involved in years of bitter fighting, including a long air campaign; the largest ever naval battle at Leyte Gulf, Philippines (1944); a three-month land campaign to retake the Philippines; the bloody 82-day battle of Okinawa; and the dropping of atomic bombs on Hiroshima and Nagasaki (1945).

**DE GAULLE FOUNDS THE FRENCH FIFTH REPUBLIC**

(1958)

In 1958, France faced a crisis over the future of its colony Algeria—members of the French army opposed that country’s independence and were in open revolt against the Fourth Republic’s policies. The Republic collapsed, and retired military and political leader General Charles de Gaulle proposed a new government system with a strong executive president. This proposal won approval in a referendum, and de Gaulle himself was elected president. This Fifth Republic is still in place in France.

**SUHARTO REPLACES SUKARNO IN INDONESIA**

(1965–67)

In 1965 there was an attempted coup against Indonesia’s President Sukarno, but troops under Major-General Suharto, who had led Indonesia to independence in 1940, defeated the rebels. Communists were blamed for the coup, and Suharto, having seized power from Sukarno, had some 500,000 alleged communists killed. As Indonesia’s second president, Suharto ruled until 1998, leading the country into a period of economic development, with better health and living conditions for many. However, his government was corrupt—he embezzled millions of dollars—and his invasion of East Timor resulted in a massive death toll.

**THE FOUNDING OF THE UNITED NATIONS**

(1944)

The United Nations was conceived during World War II as a way to bring the countries of the world together in order to prevent further devastating conflicts. Its aims were outlined at a 1944 conference at Dumbarton Oaks, Washington, DC, and it was formally established in 1945. Although the UN did not prevent subsequent wars, it has worked worldwide to promote peace and, through a range of special agencies and organizations, to champion education, health, human rights, independence for colonized peoples, and economic development. Most countries are now members.
THE MILITARY COUP IN BRAZIL (1964)

The 1964 coup ousted Brazilian president João Goulart, whose social reforms were labeled “communist” by opponents. The coup, which was carried out by part of the army with US backing, ushered in a military government whose policies were in line with US views. There was a huge increase in foreign economic involvement in Brazil, and half of the country’s largest companies passed into foreign ownership. Brazil enjoyed high economic growth under the dictatorship, but at the expense of freedom, as opponents of the regime were treated harshly.

THE RED ARMY FACTION’S TERRORIST ACTIVITY (1970s)

In 1968, many western countries saw anti-capitalist and anti-imperialist demonstrations, strikes, and riots. These failed to produce any change, however, and in the aftermath, a number of groups evolved to pursue an armed anti-capitalist struggle. One of the most long-lasting of these groups was the Germany Red Army Faction, founded in 1970 and also known as the Baader-Meinhof group, after two of its founders, Andreas Baader and Ulrike Meinhof. The group carried out a series of terrorist attacks (including kidnappings, bombings, robberies, and murders), mostly in the 1970s but also in later decades. Their activities—and those of similar groups such as the Revolutionary Cells (also operating in Germany in the same period)—alienated most people.

THE SOVIET INVASION OF AFGHANISTAN (1979)

In the late 1970s, Afghanistan’s left-wing government (a close ally of the Soviet Union) was threatened by US-backed Muslim fighters, the mujahideen, who objected to the regime’s modernizing policies in areas such as women’s education. In 1979, the USSR invaded Afghanistan, beginning a 10-year war in which an estimated 1.5 million Afghans were killed and many others left the country. Groups of mujahideen guerrillas fought the invaders, who withdrew in 1989. The war left the USSR militarily and politically weakened, contributing to its collapse. A civil war then broke out between the mujahideen and the Afghan army, and power eventually passed to the hardline Islamic Taliban.

PINOCHEt SEIZES POWER IN CHILE (1973)

In 1973, a military coup led by General Augusto Pinochet deposed Chile’s elected socialist leader Salvador Allende, bringing Pinochet to power at the head of a military junta. The US opposed Allende’s left-wing government and backed the coup, because it considered its support for right-wing dictatorships in South America as part of its Cold War struggle against communism: socialist regimes were suppressed even if they were completely democratic. Pinochet, who was notorious for imprisoning, killing, and torturing his opponents, continued to receive American backing and ruled until 1990.

THE IRANIAN REVOLUTION (1979)

Mohammad Reza Pahlavi, the Shah of Iran, headed a secular regime that westernized the country and brought prosperity for some. In the late 1970s, an increasingly strong opposition movement gained prominence, led by Islamic leaders such as Ayatollah Khomeini, who preached against the country’s encroaching secular capitalism (as well as against communism). In 1979, the Shah was forced to leave the country, and Ayatollah Khomeini installed a new government that was focused on very strict Muslim values. The revolution had a huge impact, particularly in highlighting the increasing prominence of Islam on the world stage and in relations between the countries of the west and the Middle East.

The 2003 invasion of Iraq started a war that saw forces, mainly from the US and Britain, deposing the Iraqi dictator Saddam Hussein, who oppressed his own people, supported international terrorism, and, according to the US and its allies, possessed weapons of mass destruction. Although the latter claim proved to be unfounded, the removal of Saddam Hussein was nonetheless welcomed by many Iraqis. However, the lack of a post-war strategy brought further instability and violence to Iraq, and the war gave extremist opponents of the US and their allies a pretext for launching terrorist attacks against them.
Annexation The act of annexing: of seizing new territory to append to a country or state, usually using force.

Autocracy A community or state in which unlimited authority is exercised by a single individual.

Barbarian In ancient times, a group of people, land, or culture not belonging to one of the great civilizations (Greek or Roman), and so considered less socially advanced and uncivilized.

Bourgeoisie The middle class, particularly with reference to its perceived materialistic values or conventional attitudes.

Bureaucracy A government characterized by specialization of functions, adherence to fixed rules, and a hierarchy of authority.

Caliphate The rule or rank of a caliph—an Islamic spiritual and political leader regarded as the direct successor of Muhammad.

Capitalism An economic system in which the means of production are privately owned, firms compete to sell goods for profit, and workers exchange their labor for a wage.

Civil war A war fought by opposing inhabitants of the same country.

Class A status hierarchy within the social system, reflecting power, wealth, education, and prestige.

Colony The area occupied by a body of settlers living in a new territory, often already occupied by an indigenous people that is subject to control by the settlers’ parent state.

Communism An ideology that advocates the elimination of private property in favor of communal ownership, based on the political manifesto of Karl Marx and Friedrich Engels.

Conscription Compulsory enrolment into the military service.

Constitution A written collection of the fundamental principles and laws of a nation.

Consumerism The state of an advanced capitalist society in which the buying and selling of various goods and services define the era. The term also refers to a perception that individuals desire goods to construct self-identity.

Coup d’état A sudden, illegal, and violent act of overthrowing a government or leader. It is often committed by members of the current political establishment.

Crusade A holy war undertaken on behalf of a religious cause. Often used to refer to expeditions launched by European Christians in the 11th, 12th, and 13th centuries to reclaim the Holy Land from Muslims.

Democracy A form of government in which supreme power is vested in the people and exercised by their elected representatives.

Dictator An absolute ruler, especially one who assumes complete control without the free consent of the people. This ruler can exercise their power oppressively.

Direct democracy Government by the people in fact, rather than merely in principle—citizens vote on every issue affecting them—as practiced in ancient Athens.

Divine right of kings A doctrine that holds that a monarch derives legitimacy from God, and is not subject to any earthly authority.

Dynasty A line of rulers from the same family or group, or a period in time when a country is ruled by them.

Egalitarianism A philosophy that advocates social, political, and economic equality.

Emancipation The act of being freed from legal, social, or political restrictions.

Embargo A government order to cease trade or other commercial activity with a particular country, often used as a diplomatic measure.

Emigration The act of leaving one’s own country and moving permanently to another.

Empire An extensive group of countries or people under the rule of a single leader, oligarchy, or sovereign state.

Enlightenment Also known as the Age of Reason, a period of intellectual advances in the 18th century that involved a questioning of religious understandings of the world and the application of reason.

Eugenics The belief, or the study of the belief, that the human population can be improved upon by controlling breeding.

Fascism An ideology typified by strong leadership, stress on a collective identity, and the use of violence or warfare to further the interests of the state. The term derives from the Italian fascio—a tied bundle of sticks—referring to collective identity, and was first applied to Mussolini’s regime.

Feudalism A medieval political system that consisted of small geographical units—such as principalities or dukedoms—ruled by the nobility, where the peasant population lived in a state of bondage to their ruler.

Genocide The deliberate killing of a large group of people, especially a whole religious group, race, or nation.

Guerrilla A member of an unofficial, often politically-motivated, military group that uses surprise attacks and sabotage against larger regular forces, such as the official army or police.

Hegemony The winning and holding of power and the formation of social groups during that process.

Ideology A framework of ideas that provide a viewpoint or set of beliefs for a social group.

Imperialism The policy of extending the dominion of a nation through direct intervention in the affairs of other countries, and seizure of territory and subjugation of peoples in building an empire.

Industrial Revolution A stage of development, originating in the UK in the 18th century, during which economies were transformed by new forms of mechanization from a mainly agricultural economy to an urban, industrialized one.

Insurgency A condition of revolt against a government that is less than an organized revolution and is not recognized as warfare.

Jihad In Islam, a religious duty to struggle against evil in the name of God, whether spiritually or physically.

Just war theory A doctrine of military ethics comprising Jus ad bellum (“right to war”), which is the need for a moral and legal basis for war, and Jus in bello (“justice in war”), which is the need for the moral conduct of warfare.
**Labor camp** A prison camp where people are forced to do difficult manual labor, often in bad conditions.

**Leftism, left wing** Ideology of the political “left.” It is characterized by an interventionist approach to social welfare and an internationalist worldview. The concept originated in 18th-century France, when nobility who sought to improve the peasants’ conditions sat to the left of the king.

**Liberalism** A philosophy originating in the 18th century that advocates the rights of the individual over those of the state or Church, opposing absolutism and the divine right of kings.

**Martial law** The law temporarily imposed by the military when civil law is suspended in a country or state.

**Marxism** The philosophy underpinning the writings of Karl Marx, proposing that the economic order of society determines the political and social relationships within it.

**Meritocracy** The belief that rulers should be selected on the basis of ability, rather than wealth or birth.

**Militia** A body of citizens, who may have some level of military training, who are called on to supplement a country’s professional army in times of emergency.

**Nation-state** A sovereign state inhabited by a largely homogenous group of people, who share common features such as language, descent, and traditions.

**Nationalism** Loyalty and devotion to the home nation, and the political belief that its interests should be pursued as the primary goal of a political policy.

**Nomadic** Relating to, or characteristic of, nomads—a group of people who move from place to place, often in relation to the seasons, and within a specific territory.

**Oligarchy** A form of government in which power is held by a small group and exercised in their own interest, usually to the detriment of the general population.

**Paramilitary** A group of civilians that have military training and are organized according to military structure, which often acts as support for a country’s official military force.

**Partisan** An absolute supporter of a particular political leader, party, or cause who typically exhibits unquestioning allegiance.

**Pilgrimage** A journey to a shrine or sacred site as an act of religious devotion.

**Prehistory** The period of human past before written records began, and so largely understood through archaeological history.

**Proletariat** The lowest social or economic class of a community.

**Propaganda** The organized spread of information, ideas, and opinion, often via the media, to either promote or damage a government, movement, institution etc.

**Puppet state** A country that is nominally independent, but in fact relies on an external foreign power, which often controls the state using military force.

**Racism** The belief that all members of a certain race share similar characteristics and attributes, and that this means that certain races are inherently superior or inferior.

**Rationalism** The belief that reason, not emotion or intuition, should govern the actions that people take.

**Reformation** A 16th-century European political and religious movement that sought reform from the Roman Catholic Church and papal authority, and resulted in the establishment of the Protestant Churches.

**Renaissance** A period of time in Europe from the 14th–17th century marked by great achievements in the arts, literature, and learning, often regarded as the transition from the medieval to the modern world.

**Reparations** Compensation—usually money, material, or labor—paid by a defeated nation to make up for damage, injuries, and economic losses suffered by another country as the result of war.

**Republic** A state with no monarch, in which power resides with the people and is exercised by their elected representatives.

**Revolution** An overthrow of the current political regime or social order, sometimes using violent measures, by the governed people.

**Rightism, right wing** The ideology of the political “right,” loosely defined as favoring conservative, pro-market attitudes, a preference for individual rights over interventionist government, a strict approach to law and order, and nationalism. The concept originated in 18th-century France, when those who were broadly in support of the monarchy sat to the right of the king.

**Separatists** A group of people who advocate separation from an organization or group.

**Serf** Especially in medieval Europe, a lower class person bound to undertake agricultural work on his lord’s land. A serf could be transferred with the land should it be sold to a new landowner.

**Socialism** An ideology and method of government that advocates state ownership and regulation of industry, and central control over the allocation of resources, as opposed to allowing these to be determined by market forces.

**Sovereignty** Supreme power as exercised by an autonomous state or ruler, free from any external influence or control. Usually used to refer to a nation’s right to self-determination in internal affairs and international relations with other countries.

**Space Age** A period in the 20th century characterized by space exploration. It is considered to have started in October 1957 when the Soviet Union first launched the satellite Sputnik I into orbit.

**State** An organized authority that has legitimate control over a territory, and a monopoly of the use of force within its territory.

**Suffrage** The right to vote in elections or referenda. Universal suffrage refers to the right to vote of citizens regardless of their gender, race, social status, or wealth. Women’s suffrage describes the right of women to vote on the same basis as men, as campaigned for in the early 20th century by activists such as the “suffragettes.”

**Superpower** A sovereign nation with great political and military power, capable of influencing international politics.

**Totalitarianism** A regime that subordinates the rights of the individual in favor of the interests of the state, through control of political and economic affairs and prescription of the attitudes, values, and beliefs of the population.

**Treaty** A formal contract that sets out agreements—such as an alliance, the end of hostilities, or a trade agreement—between two or more states.

**Vassal** In a feudal system, a man granted the use of land by a king, lord, or other superior landowner, in return for homage and allegiance.

**Viceroy** A ruler who controls a colony on behalf of his or her sovereign.

**Zionism** A worldwide political movement that proclaims that the Jewish people constitute a nation, and are therefore entitled to a homeland. It originally focused on creating a country for Jewish people, and now looks to develop and protect the modern state of Israel.
INDEX

Numbers in bold refer to main entries.
